ANALYTICAL RESULTS

Project Location: Huntersville, NC
Date Received: 2/9/2022
Field Sample #: SVP-13
Sample ID: 22B0463-04
Sample Matrix: Soil Gas
Sampled: 2/8/2022 09:02

Sample Description/Location:
Sub Description/Location:
Canister ID: 2155
Canister Size: 6 liter
Flow Controller ID: 4283
Sample Type: 30 min

Work Order: 22B0463
Initial Vacuum(in Hg): -29
Final Vacuum(in Hg): -5
Receipt Vacuum(in Hg): -5
Flow Controller Type: Fixed-Orifice
Flow Controller Calibration
RPD Pre and Post-Sampling: <20%

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22B0467-01[SVP-10], 22B0467-02[SVP-11], 22B0467-03[SVP-12], 22B0467-04[SVP-14], B301330-BLK1, B301330-BS1, B301342-BLK1, B301342-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate

22B0467-01[SVP-10], 22B0467-02[SVP-11], 22B0467-03[SVP-12], 22B0467-04[SVP-14], B301330-BLK1, B301330-BS1, B301342-BLK1, B301342-BS1, S068312-CCV1, S068325-CCV1

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22B0467-01[SVP-10], 22B0467-02[SVP-11], 22B0467-03[SVP-12], 22B0467-04[SVP-14], B301330-BLK1, B301330-BS1, B301342-BLK1, B301342-BS1, S068312-CCV1, S068325-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate

B301330-BS1, B301342-BS1, S068312-CCV1, S068325-CCV1

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ANALYTICAL RESULTS

Project Location: Huntersville, NC
Date Received: 2/9/2022
Field Sample #: SVP-14
Sample ID: 22B0467-04
Sample Matrix: Soil Gas
Sampled: 2/8/2022 08:48

Sample Description/Location:
Sub Description/Location:
Canister ID: 2473
Canister Size: 6 liter
Flow Controller ID: 4298
Sample Type: 30 min

Work Order: 22B0467
Initial Vacuum(in Hg): -30
Final Vacuum(in Hg): -5
Receipt Vacuum(in Hg): -3
Flow Controller Type: Fixed-Orifice
Flow Controller Calibration
RPD Pre and Post-Sampling: <20%

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT 03/16/22: The COA has been revised.
REVISED REPORT: 3/3/2022 - For Method TO-15/APH, due to low canister volume, sample DUP-01 was not analyzed per client's request.

EPA TO-15

Qualifications:

DL-02 Elevated method reporting limit due to insufficient sample volume.

Analyte & Samples(s) Qualified:

22B0471-01[Ambient-1]

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22B0471-01[Ambient-1], 22B0471-02[Ambient-2], 22B0471-04[Trip Blank], B301342-BLK1, B301342-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate

22B0471-01[Ambient-1], 22B0471-02[Ambient-2], 22B0471-04[Trip Blank], B301342-BLK1, B301342-BS1, S068325-CCV1

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22B0471-01[Ambient-1], 22B0471-02[Ambient-2], 22B0471-04[Trip Blank], B301342-BLK1, B301342-BS1, S068325-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate

B301342-BS1, S068325-CCV1

MADEP APH rev 1

Qualifications:

DL-02 Elevated method reporting limit due to insufficient sample volume.

Analyte & Samples(s) Qualified:

22B0471-01[Ambient-1]

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
DL-02	Elevated method reporting limit due to insufficient sample volume.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED 03-17-22: The C9-C10 range result has been revised.

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, Ethyl Acetate

B302055-BLK1, B302055-BS2, 22B1231-01[SVP-01], 22B1231-02[SVP-02], 22B1231-03[SVP-03], 22B1231-04[SVP-04], B302055-BS1

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Trichlorofluoromethane (Freon 11)

22B1231-01[SVP-01], 22B1231-02[SVP-02], 22B1231-03[SVP-03], 22B1231-04[SVP-04], B302055-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, Isopropylbenzene (Cumene), n-Butylbenzene, Propylbenzene, sec-Butylbenzene, tert-Butylbenzene, Vinyl Acetate

B302055-BLK1, B302055-BS2, 22B1231-01[SVP-01], 22B1231-02[SVP-02], 22B1231-03[SVP-03], 22B1231-04[SVP-04], B302055-BS1, S068623-CCV1

V-06 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

Trichlorofluoromethane (Freon 11)

22B1231-01[SVP-01], 22B1231-02[SVP-02], 22B1231-03[SVP-03], 22B1231-04[SVP-04], B302055-BS1, S068623-CCV1

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22B1231-01[SVP-01], 22B1231-02[SVP-02], 22B1231-03[SVP-03], 22B1231-04[SVP-04], B302055-BLK1, B302055-BS1, S068623-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, Ethyl Acetate

B302055-BLK1, B302055-BS2, 22B1233-01[Ambient-01], 22B1233-02[DUP-01], 22B1233-03[Trip Blank], B302055-BS1

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Trichlorofluoromethane (Freon 11)

22B1233-01[Ambient-01], 22B1233-02[DUP-01], B302055-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, Isopropylbenzene (Cumene), n-Butylbenzene, Propylbenzene, sec-Butylbenzene, tert-Butylbenzene, Vinyl Acetate

B302055-BLK1, B302055-BS2, 22B1233-01[Ambient-01], 22B1233-02[DUP-01], 22B1233-03[Trip Blank], B302055-BS1, S068623-CCV1

V-06 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

Trichlorofluoromethane (Freon 11)

22B1233-01[Ambient-01], 22B1233-02[DUP-01], B302055-BS1, S068623-CCV1

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22B1233-01[Ambient-01], 22B1233-02[DUP-01], 22B1233-03[Trip Blank], B302055-BLK1, B302055-BS1, S068623-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate

B302055-BS1, S068623-CCV1

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 4/11/22 - Updated APH range process per client's request.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, trans-1,3-Dichloropropene, Vinyl Acetate
B303914-BS1, B303914-BS2

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,2-Dichloropropane, Heptane, tert-Butyl Alcohol (TBA)
B303914-BS1, 22C1070-01[SVP-10], 22C1070-02[SVP-11], 22C1070-03[SVP-12], 22C1070-04[SVP-14], B303914-BS2

V-04 Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene
22C1070-01[SVP-10], 22C1070-02[SVP-11], 22C1070-03[SVP-12], 22C1070-04[SVP-14], B303914-BLK1, B303914-BS1, S069523-CCV1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Ethyl Acetate, Hexachlorobutadiene
22C1070-01[SVP-10], 22C1070-02[SVP-11], 22C1070-03[SVP-12], 22C1070-04[SVP-14], B303914-BLK1, B303914-BS1, S069523-CCV1

V-06 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, tert-Butyl Alcohol (TBA)
22C1070-02[SVP-11], 22C1070-03[SVP-12], B303914-BS2, S069523-CCV2, 22C1070-04[SVP-14]

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, Vinyl Acetate
B303914-BS1, S069523-CCV1, B303914-BS2, S069523-CCV2

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate
22C1070-01[SVP-10], 22C1070-02[SVP-11], 22C1070-03[SVP-12], 22C1070-04[SVP-14], B303914-BLK1, B303914-BS1, S069523-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate
B303914-BS1, S069523-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

Acetone

22C1070-03[SVP-12]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics

22C1070-02[SVP-11], 22C1070-03[SVP-12]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

Acetone

22C1070-02[SVP-11]

RL-11 Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22C1070-01RE1[SVP-10]

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
RL-11	Elevated reporting limit due to high concentration of target compounds.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 4/11/22 - Updated APH range process per client's request.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, trans-1,3-Dichloropropene, Vinyl Acetate

B303914-BS1, B303914-BS2

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,2-Dichloropropane, Heptane, tert-Butyl Alcohol (TBA)

B303914-BS1, 22C1077-01[SVP-05], 22C1077-02[SVP-06], 22C1077-03[SVP-07], 22C1077-04[SVP-08], 22C1077-05[SVP-09], 22C1077-06[SVP-13], B303914-BS2

V-04 Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene

22C1077-01[SVP-05], 22C1077-02[SVP-06], 22C1077-03[SVP-07], 22C1077-04[SVP-08], 22C1077-05[SVP-09], 22C1077-06[SVP-13], B303914-BLK1, B303914-BS1, S069523-CCV1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Ethyl Acetate, Hexachlorobutadiene

22C1077-01[SVP-05], 22C1077-02[SVP-06], 22C1077-03[SVP-07], 22C1077-04[SVP-08], 22C1077-05[SVP-09], 22C1077-06[SVP-13], B303914-BLK1, B303914-BS1, S069523-CCV1

V-06 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, tert-Butyl Alcohol (TBA)

22C1077-01[SVP-05], 22C1077-02[SVP-06], 22C1077-03[SVP-07], 22C1077-04[SVP-08], 22C1077-05[SVP-09], B303914-BS2, S069523-CCV2, 22C1077-06[SVP-13]

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, Vinyl Acetate

B303914-BS1, S069523-CCV1, B303914-BS2, S069523-CCV2

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22C1077-01[SVP-05], 22C1077-02[SVP-06], 22C1077-03[SVP-07], 22C1077-04[SVP-08], 22C1077-05[SVP-09], 22C1077-06[SVP-13], B303914-BLK1, B303914-BS1, S069523-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate

B303914-BS1, S069523-CCV1

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

2-Propanol, 2-methyl-, Acetone, Ethyl Acetate

22C1077-05[SVP-09], 22C1077-04[SVP-08]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics, C9-C12 Aliphatics

22C1077-02[SVP-06], 22C1077-04[SVP-08], 22C1077-05[SVP-09]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

Decamethylcyclopentasiloxane

22C1077-02[SVP-06]

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

ANALYTICAL RESULTS

Project Location: Huntersville, NC
Date Received: 3/16/2022
Field Sample #: SVP-13
Sample ID: 22C1077-06
Sample Matrix: Soil Gas
Sampled: 3/15/2022 08:46

Sample Description/Location:
Sub Description/Location:
Canister ID: 2019
Canister Size: 6 liter
Flow Controller ID: 4072
Sample Type: 30 min

Work Order: 22C1077
Initial Vacuum(in Hg): -30
Final Vacuum(in Hg): -5
Receipt Vacuum(in Hg): -3.1
Flow Controller Type: Fixed-Orifice
Flow Controller Calibration
RPD Pre and Post-Sampling: <20%

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Air Media Sample Receipt Checklist - (Rejection Criteria Listing - Using Acceptance Policy) Any False Statement will be brought to the attention of the Client - State True or False

Client: Apex

Received By: [signature] Date: 3/16/22 Time: 0927

How were the samples received? In Cooler: ___ On Ice: ___ No Ice: T

In Box: T Ambient: ___ Melted Ice: ___

Were samples within Temperature Compliance? 2-6°C: n/a By Gun #: ___ Actual Temp -: ___

By Blank #: ___ Actual Temp -: ___

Was Custody Seal Intact? n/a Were Samples Tampered with? n/a

Was COC Relinquished ? T Does Chain Agree With Samples? T

Are there any loose caps/valves on any samples? F

Is COC in ink/ Legible? T

Did COC Include all Pertinent Information? Client: T Analysis: T Sampler Name: T

Project: T ID's: T Collection Dates/Times: T

Are Sample Labels filled out and legible? T

Are there Rushes? F Who was notified? ___

Samples are received within holding time? T

Proper Media Used? T Individually Certified Cans? T

Are there Trip Blanks? F Is there enough Volume? T

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 5/24/22 - Revised at the request of the client Acetophenone was not removed from the C9-C12 aliphatic adjusted range.

REVISED REPORT - 5/2/22 - Revised To-15 compound list per clients request.

REVISED REPORT - 4/11/22 - Updated APH range process per client's request.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, trans-1,3-Dichloropropene, Vinyl Acetate
B303914-BS1, B303914-BS2

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,2-Dichloropropane, Heptane, tert-Butyl Alcohol (TBA)
B303914-BS1, 22C1082-01[SVP-01], 22C1082-02[SVP-02], 22C1082-03[SVP-03], 22C1082-04[SVP-04], B303914-BS2

V-04 Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene
22C1082-01[SVP-01], 22C1082-02[SVP-02], 22C1082-03[SVP-03], 22C1082-04[SVP-04], B303914-BLK1, B303914-BS1, S069523-CCV1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Ethyl Acetate, Hexachlorobutadiene
22C1082-01[SVP-01], 22C1082-02[SVP-02], 22C1082-03[SVP-03], 22C1082-04[SVP-04], B303914-BLK1, B303914-BS1, S069523-CCV1

V-06 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, tert-Butyl Alcohol (TBA)
22C1082-01[SVP-01], 22C1082-03[SVP-03], 22C1082-04[SVP-04], S069523-CCV2, 22C1082-02[SVP-02], B303914-BS2

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, Vinyl Acetate
B303914-BS1, S069523-CCV1, B303914-BS2, S069523-CCV2

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate
22C1082-01[SVP-01], 22C1082-02[SVP-02], 22C1082-03[SVP-03], 22C1082-04[SVP-04], B303914-BLK1, B303914-BS1, S069523-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate
B303914-BS1, S069523-CCV1

MADEP APH rev 1

Qualifications:

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

Acetone

22C1082-01[SVP-01]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics

22C1082-01[SVP-01], 22C1082-03[SVP-03]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

Acetone

22C1082-03[SVP-03]

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 5/2/22 - Revised To-15 compound list per clients request.

REVISED REPORT - 4/11/22 - Updated APH range process per client's request.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, trans-1,3-Dichloropropene, Vinyl Acetate
B303914-BS1, B303914-BS2

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,2-Dichloropropane, Heptane, tert-Butyl Alcohol (TBA)
22C1083-04[Ambient-02], B303914-BS1, 22C1083-01[Ambient-01], 22C1083-02[Dup-01], B303914-BS2

V-04 Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene
22C1083-01[Ambient-01], 22C1083-02[Dup-01], 22C1083-03[Trip Blank], 22C1083-04[Ambient-02], B303914-BLK1, B303914-BS1, S069523-CCV1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Ethyl Acetate, Hexachlorobutadiene
22C1083-01[Ambient-01], 22C1083-02[Dup-01], 22C1083-03[Trip Blank], 22C1083-04[Ambient-02], B303914-BLK1, B303914-BS1, S069523-CCV1

V-06 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

2,2,4-Trimethylpentane, tert-Butyl Alcohol (TBA)
22C1083-01[Ambient-01], 22C1083-02[Dup-01], B303914-BS2, S069523-CCV2

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,2,2-Tetrachloroethane, 2-Hexanone (MBK), 4-Methyl-2-pentanone (MIBK), Acrylonitrile, Methyl methacrylate, Vinyl Acetate
B303914-BS1, S069523-CCV1, B303914-BS2, S069523-CCV2

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate
22C1083-01[Ambient-01], 22C1083-02[Dup-01], 22C1083-03[Trip Blank], 22C1083-04[Ambient-02], B303914-BLK1, B303914-BS1, S069523-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Acetate
B303914-BS1, S069523-CCV1

MADEP APH rev 1

Qualifications:

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

Acetone

22C1083-02[Dup-01]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics

22C1083-01[Ambient-01], 22C1083-02[Dup-01]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22C1083-01[Ambient-01]

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D0889-01RE1[SVP-10], 22D0889-02RE1[SVP-11], 22D0889-03RE1[SVP-12], 22D0889-04RE1[SVP-14], B306258-BLK1, B306258-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D0889-01RE1[SVP-10], 22D0889-02RE1[SVP-11], 22D0889-03RE1[SVP-12], 22D0889-04RE1[SVP-14], B306258-BLK1, B306258-BS1, S070571-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B306227-BS1, S070556-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B306227-BS1, S070556-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

Nonanal

22D0889-03[SVP-12]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics, C9-C12 Aliphatics

22D0889-02[SVP-11], 22D0889-03[SVP-12], 22D0889-01[SVP-10]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

1-Hexanol, 2-ethyl-, Acetone

22D0889-01[SVP-10], 22D0889-03[SVP-12], 22D0889-02[SVP-11]

RL-11 Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22D0889-01RE1[SVP-10]

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Comments:
See TO-15 list from Andrew Street

Please use the following codes to indicate possible sample concentration within the Conc Code column above:
H - High; M - Medium; L - Low; C - Clean; U - Unknown

Matrix Codes:
SG = SOIL GAS
IA = INDOOR AIR
AMB = AMBIENT
SS = SUB SLAB
D = DUP
BL = BLANK
O = Other_____

Please fill out completely, sign, date and retain the yellow copy for your records

Summa canisters and flow controllers must be returned within 15 days of receipt or rental fees will apply

For summa canister and flow controller information please refer to Con-Test's Air Media Agreement

Air Media Sample Receipt Checklist - (Rejection Criteria Listing - Using Acceptance Policy) Any False Statement will be brought to the attention of the Client - State True or False

Client: Pace NC

Received By: MP | Date: 4/13/22 | Time: 953

How were the samples received? In Cooler: | On Ice: | No Ice: | In Box: T | Ambient: | Melted Ice:

Were samples within Temperature Compliance? 2-6°C: | By Gun #: | Actual Temp - | By Blank #: | Actual Temp -

Was Custody Seal Intact? NA | Were Samples Tampered with? NT

Was COC Relinquished ? T | Does Chain Agree With Samples? T

Are there any loose caps/valves on any samples? F

Is COC in ink/ Legible? T

Did COC Include all Pertinent Information? Client: T | Analysis: T | Sampler Name: T | Project: T | ID's: T | Collection Dates/Times: T

Are Sample Labels filled out and legible? T

Are there Rushes? F | Who was notified?

Samples are received within holding time? T

Proper Media Used? T | Individually Certified Cans? T

Are there Trip Blanks? F | Is there enough Volume? T

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Acrylonitrile, Ethyl Acetate, Hexachlorobutadiene

22D0897-03[SVP-03], B306302-BLK1, B306302-BS1, 22D0897-01RE1[SVP-01], 22D0897-02RE1[SVP-02], 22D0897-03RE1[SVP-03], 22D0897-04RE1[SVP-04], B306258-BLK1, B306258-BS1

V-04 Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene

22D0897-03[SVP-03], B306302-BLK1, B306302-BS1, S070596-CCV1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Acrylonitrile, Ethyl Acetate

22D0897-03[SVP-03], B306302-BLK1, B306302-BS1, S070596-CCV1, 22D0897-01RE1[SVP-01], 22D0897-02RE1[SVP-02], 22D0897-03RE1[SVP-03], 22D0897-04RE1[SVP-04], B306258-BLK1, B306258-BS1, S070571-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B306227-BS1, S070556-CCV1

V-34 Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22D0897-03[SVP-03], B306302-BLK1, B306302-BS1, S070596-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride, Vinyl Acetate

B306227-BS1, S070556-CCV1, B306302-BS1, S070596-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

Ethyl Acetate

22D0897-02[SVP-02]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics

22D0897-02[SVP-02], 22D0897-03[SVP-03]

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria. Reported result is estimated.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Air Sampling Media Certificate of Analysis

Date Analyzed: 3/22/2022 **Batch #:** J22A081015.D

Certification Type: *Batch Certified* ☐ *Individual Certified* ☑

Media Type: *Summa Canister* ☑ *Flow Controllers* ☐

Media IDs: BC1965

Note:Two ID's grouped together, for example BC2136/BC3145, represents matched pairs of certified summa canisters and flow controllers.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D0903-01RE1[Dup-01], 22D0903-02RE1[Trip Blank], B306258-BLK1, B306258-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D0903-01RE1[Dup-01], 22D0903-02RE1[Trip Blank], B306258-BLK1, B306258-BS1, S070571-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B306227-BS1, S070556-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B306227-BS1, S070556-CCV1

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D1001-01RE1[Ambient-01], 22D1001-02RE1[Ambient-02], B306258-BLK1, B306258-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D1001-01RE1[Ambient-01], 22D1001-02RE1[Ambient-02], B306258-BLK1, B306258-BS1, S070571-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B306227-BS1, S070556-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B306227-BS1, S070556-CCV1

MADEP APH rev 1

Qualifications:

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics

22D1001-01[Ambient-01], 22D1001-02[Ambient-02]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

Acetone

22D1001-02[Ambient-02]

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

ANALYTICAL RESULTS

Project Location: Huntersville, NC
Date Received: 4/13/2022
Field Sample #: Ambient-02
Sample ID: 22D1001-02
Sample Matrix: Ambient Air
Sampled: 4/12/2022 00:00

Sample Description/Location:
Sub Description/Location:
Canister ID: 1977
Canister Size: 6 liter
Flow Controller ID: 3710
Sample Type: 24 hr

Work Order: 22D1001
Initial Vacuum(in Hg): -28
Final Vacuum(in Hg): -9.5
Receipt Vacuum(in Hg): -11
Flow Controller Type: Fixed-Orifice
Flow Controller Calibration
RPD Pre and Post-Sampling: <20%

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

EPA TO-15

Qualifications:

L-03 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D1004-01RE1[SVP-05], 22D1004-02RE1[SVP-06], 22D1004-03RE1[SVP-07], 22D1004-04RE1[SVP-08], 22D1004-05RE1[SVP-09], 22D1004-06RE1[SVP-13], B306258-BLK1, B306258-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Acrylonitrile

22D1004-01RE1[SVP-05], 22D1004-02RE1[SVP-06], 22D1004-03RE1[SVP-07], 22D1004-04RE1[SVP-08], 22D1004-05RE1[SVP-09], 22D1004-06RE1[SVP-13], B306258-BLK1, B306258-BS1, S070571-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B306227-BS1, S070556-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B306227-BS1, S070556-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

1-Hexanol, 2-ethyl-, Acetone, Nonanal

22D1004-05[SVP-09]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics, C9-C12 Aliphatics

22D1004-05[SVP-09], 22D1004-06[SVP-13], 22D1004-02[SVP-06]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

Decamethylcyclopentasiloxane

22D1004-02[SVP-06]

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

I Have Not Confirmed Sample Container Numbers With Lab Staff Before Relinquishing Over Samples_____

con-test® ANALYTICAL LABORATORY

Doc# 278 Rev 6 2017

Air Media Sample Receipt Checklist - (Rejection Criteria Listing - Using Acceptance Policy) Any False Statement will be brought to the attention of the Client - State True or False

Client Pace NC

Received By	MP		Date	4/13/22		Time	953
How were the samples received?	In Cooler		On Ice			No Ice	
	In Box	T	Ambient			Melted Ice	
Were samples within Temperature Compliance? 2-6°C	By Gun #		Actual Temp -				
	By Blank #		Actual Temp -				
Was Custody Seal Intact?	NA		Were Samples Tampered with?			NT	
Was COC Relinquished ?	T		Does Chain Agree With Samples?			T	
Are there any loose caps/valves on any samples?	F						
Is COC in ink/ Legible?	T						
Did COC Include all Pertinent Information?	Client	T	Analysis	T		Sampler Name	T
	Project	T	ID's	T		Collection Dates/Times	T
Are Sample Labels filled out and legible?	T						
Are there Rushes?	F		Who was notified?				
Samples are received within holding time?	T						
Proper Media Used?	T		Individually Certified Cans?			T	
Are there Trip Blanks?	F		Is there enough Volume?			T

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,4-Dichlorobenzene

22E0954-01[SVP-05], 22E0954-03[SVP-07], B308608-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Naphthalene

22E0954-01[SVP-05], 22E0954-02[SVP-06], 22E0954-03[SVP-07], 22E0954-04[SVP-08], 22E0954-05[SVP-09], 22E0954-06[SVP-13], B308608-BLK1, B308608-BS1, S071603-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1, S071603-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B308608-BS1, S071603-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

Acetone

22E0954-02[SVP-06]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics, C9-C12 Aliphatics

22E0954-02[SVP-06], 22E0954-03[SVP-07], 22E0954-05[SVP-09]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

Decamethylcyclopentasiloxane

22E0954-02[SVP-06]

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22E0955

The results of analyses performed on the following samples submitted to Con-Test, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: Huntersville, NC

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Dup-01	22E0955-01	Soil Gas		-	
				EPA TO-15	
				MADEP APH rev 1	
Ambient-01	22E0955-02	Ambient Air		-	
Trip Blank	22E0955-03	Soil Gas		-

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 8/4/22 - RF to calculated TICs concentrations corrected.

REVISED REPORT - 6/30/22 - Sample Extraction Data (page 12) information updated.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

For APH for sample 22E0955-01 at the request of the client Acetophenone was not removed from the C9-C12 aliphatic adjusted range.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,4-Dichlorobenzene

22E0955-01[Dup-01], B308608-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Naphthalene

22E0955-01[Dup-01], 22E0955-03[Trip Blank], B308608-BLK1, B308608-BS1, S071603-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1, S071603-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B308608-BS1, S071603-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

Isopropyl alcohol, Nonanal

22E0955-01[Dup-01]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics, C9-C12 Aliphatics

22E0955-01[Dup-01]

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Comments:
See Andrew Street for TO-15 list
Contact Andrew Street before running Ambient_1, Ambient_2.

Please use the following codes to indicate possible sample concentration within the Conc Code column above:
H - High; M - Medium; L - Low; C - Clean; U - Unknown

Matrix Codes:
SG = SOIL GAS
IA = INDOOR AIR
AMB = AMBIENT
SS = SUB SLAB
D = DUP
BL = BLANK
O = Other_____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

con-test®

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,4-Dichlorobenzene

B308608-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Naphthalene

22E0956-01[SVP-10], 22E0956-02[SVP-11], 22E0956-03[SVP-12], 22E0956-04[SVP-14], 22E0956-05[SVP-15], B308608-BLK1, B308608-BS1, S071603-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1, S071603-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B308608-BS1, S071603-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

1-Hexanol, 2-ethyl-, Acetic acid, 2-ethylhexyl ester

22E0956-02[SVP-11]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C9-C12 Aliphatics

22E0956-01[SVP-10], 22E0956-02[SVP-11]

A-13 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.

Analyte & Samples(s) Qualified:

1-Hexanol, 2-ethyl-

22E0956-01[SVP-10]

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
A-13	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to <70% for the identification to be made.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22E0957

The results of analyses performed on the following samples submitted to Con-Test, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: Huntersville, NC

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 8/4/22 - RF to calculated TICs concentrations corrected.

For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

EPA TO-15

Qualifications:

L-01 Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1

L-05 Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,4-Dichlorobenzene

22E0957-04[SVP-04], B308608-BS1

V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Naphthalene

22E0957-01[SVP-01], 22E0957-02[SVP-02], 22E0957-03[SVP-03], 22E0957-04[SVP-04], B308608-BLK1, B308608-BS1, S071603-CCV1

V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Benzyl chloride

B308608-BS1, S071603-CCV1

V-36 Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,2,4-Trichlorobenzene, Benzyl chloride

B308608-BS1, S071603-CCV1

MADEP APH rev 1

Qualifications:

A-11 For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.

Analyte & Samples(s) Qualified:

1-Hexanol, 2-ethyl-

22E0957-04[SVP-04]

A-12 For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.

Analyte & Samples(s) Qualified:

C5-C8 Aliphatics, C9-C12 Aliphatics

22E0957-02[SVP-02], 22E0957-04[SVP-04]

MADEP APH rev 1

No significant modifications were made to the APH method.

All performance/acceptance standards for required QA/QC procedures were achieved unless otherwise indicated in this case narrative.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
RL	Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
LCS Dup	Duplicate Laboratory Control Sample
MS	Matrix Spike Sample
MS Dup	Duplicate Matrix Spike Sample
REC	Recovery
QC	Quality Control
ppbv	Parts per billion volume
EPA	United States Environmental Protection Agency
% REC	Percent Recovery
ND	Not Detected
N/A	Not Applicable
DL	Detection Limit
NC	Not Calculated
LFB/LCS	Lab Fortified Blank/Lab Control Sample
ORP	Oxidation-Reduction Potential
wet	Not dry weight corrected
% wt	Percent weight
Kg	Kilogram
g	Gram
mg	Milligram
µg	Microgram
ng	Nanogram
L	Liter
mL	Milliliter
µL	Microliter
m3	Cubic Meter
EPH	Extractable Petroleum Hydrocarbons
VPH	Volatile Petroleum Hydrocarbons
APH	Air Petroleum Hydrocarbons
FID	Flame Ionization Detector
PID	Photo Ionization Detector
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
A-11	For method APH, professional judgment was used for the Tentatively Identified Compounds (TICs) of non-APH compounds. The spectral library match was outside of method specifications of >85%, to >70% for the identification to be made.
A-12	For method APH, the Tentatively Identified Compounds - (non-APH), were subtracted from the associated carbon ranges.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-01	Laboratory fortified blank/laboratory control sample recovery outside of control limits. Data validation is not affected since all results are "not detected" for all samples in this batch for this compound and bias is on the high side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

Note: Blank Subtraction is not performed unless otherwise noted

V-36	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Data Validation Report

Site:	Colonial Pipeline
Laboratory:	Contest Analytical/Pace New England, East Longmeadow, MA
SDG Numbers:	21J0956 (revised 1/4/22), 21J0957 (revised 1/4/22), 21J0958 (revised 1/4/22)
Parameter:	Volatile Organic Compounds (VOCs) and Air-Phase Petroleum Hydrocarbons (APH)
Data Reviewer:	Kristen Morin/TRC
Peer reviewer:	Elizabeth Denly/TRC
Date:	January 4, 2022

Samples Reviewed and Evaluation Summary

SDG 21J0956 (revised 1/4/22)

4 Soil Vapor Samples: SVP-01, SVP-02, SVP-03, SVP-04

SDG 21J0957 (revised 1/4/22)

5 Soil Vapor Samples: SVP-10, SVP-11, SVP-12, SVP-14, SVP-15

SDG 21J0958 (revised 1/4/22)

6 Soil Vapor Samples: SVP-05, SVP-06, SVP-07, SVP-08, SVP-09, SVP-13

The above-listed soil vapor samples were collected on October 15, 2021 and were analyzed for VOCs by EPA method TO-15 and APH by Massachusetts Department of Environmental Protection (MassDEP) APH Method, Revision 1. The data validation was performed in accordance with the following guidance, modified for the methodologies utilized:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020

The data were evaluated based on the following parameters:

	•	Overall Evaluation of Data and Potential Usability Issues
	•	Data Completeness
*	•	Holding Times and Sample Integrity
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
*	•	Initial and Continuing Calibrations
*	•	Blanks
*	•	Surrogates
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
NA	•	Laboratory Duplicate Results
NA	•	Field Duplicate Results
	•	Sample Results and Reported Quantitation Limits (QLs)
*	•	Target Compound Identification
*	-	All criteria were met.
NA	-	A field duplicate pair and laboratory duplicate were not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives. Qualifications applied to the data as a result of sampling error were not required. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and APH results that were below the lowest calibration standard and QL; these results were qualified as estimated (J) in the associated samples. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive and nondetect results for ethyl acetate were qualified as estimated (J-/UJ) with a potential low bias in all samples in this data set due to low LCS recovery. However, the nondetect results for ethyl acetate in samples SVP-11 and SVP-15 were also qualified as estimated (J) by the laboratory due to detection below the lowest calibration standard and QL; thus, the overall qualification was J for ethyl acetate in these two samples. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive result for vinyl acetate in several samples were qualified as estimated (J) due to high LCS recovery and detection below the lowest calibration standard and QL. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

Data Completeness

The data packages were complete as received by the laboratory with the following exceptions/notes:

- In all three SDGs:
    - The GC/MS tune results were not provided for the GC/MS tune associated with the TO-15 initial calibration performed on 10/7/2021 on instrument SYSJ. The laboratory was contacted during validation and provided revised data packages to correct this issue.
    - The raw data were not provided for the flow controller pre- and post-sampling flow rates. Thus, the flow controller relative percent differences (RPDs) provided by the laboratory could not be recalculated during validation. The laboratory was contacted during validation and stated they did not have the ability to provide the raw values.
    - The result and response for vinyl acetate were blocked out by the laboratory on the raw data in the initial calibration verification (ICV) performed on 10/15/2021. The laboratory was contacted during validation and provided revised data packages to correct this issue.
    - The result and response for hexane were blocked out by the laboratory on the raw data in the low-level calibration verification check performed on 10/14/2021. The laboratory was contacted during validation and provided revised data packages to correct this issue.
    - During validation and review of the raw data, it was noted in several samples that APH target results detected between the method detection limit (MDL) and QL were not reported on the APH Form 1s by the laboratory, although both the MDL and QL were presented on the APH Form 1s. The laboratory was contacted during validation and provided revised data packages to correct this issue.
    - The units for APH hydrocarbon results on the Form 1s within the raw data were incorrectly noted by the laboratory as parts per billion by volume (ppbv) when these

results were in fact reported in micrograms per cubic meter (µg/m^3). The correct units were reported on the Qualified Form 1s that were utilized during validation.

- In SDG 21J0956, it appeared that the flow controller ID on the chain-of-custody (COC) for sample SVP-04 was identified as 1484; however, the flow controller ID for this sample was identified as 1489 by the laboratory. The laboratory was contacted during validation and stated that they did not have a flow controller with the ID 1484 and that the number 1484 on the COC was likely an error.

- In SDG 21J0957:
  - The pre- and post- sampling flow controller RPD was missing for sample SVP-10. The laboratory was contacted during validation and provided a revised data package to correct this issue.
  - The dilution factor for naphthalene (TO-15) in sample SVP-10 was incorrectly listed as 1-fold on the Form 1. All other results that were reported from the same analysis (analyzed on 10/20/21 at 23:23) were correctly reported using the 4-fold dilution factor; this was confirmed using the raw data. The laboratory was contacted during validation and provided a revised data package to correct this issue.
  - The laboratory was asked to confirm the nondetect result for MTBE (APH) in sample SVP-10 since a peak was present at a similar retention time according to the sample chromatogram. This result was confirmed by the laboratory to be nondetect.

No validation actions were required on the basis of these issues.

Holding Times and Sample Integrity

All holding time and canister vacuum criteria were met.

GC/MS Tunes

All criteria were met for the TO-15 and APH analyses.

Initial and Continuing Calibrations

All percent relative standard deviations, correlation coefficients, and relative response factors (RRFs) were within the acceptance criteria for target analytes in the initial calibrations (ICs) associated with the samples in this data set.

The QL checks in the ICs were within the acceptance criteria for target analytes that were calibrated using linear regression.

The RRFs and percent differences or percent drifts were within the acceptance criteria for target analytes in the continuing calibration standards associated with the samples in this data set.

Blanks

No target compounds were detected in the individual canister certification checks or the associated method blanks.

Surrogates

All surrogate percent recoveries (%Rs) were within the method acceptance limits for the TO-15 and

APH analyses.

Internal Standards

All criteria were met for the TO-15 and APH analyses.

LCS Results

All criteria were met for the APH analyses.

The following table summarizes the TO-15 LCS %Rs that did not meet the acceptance criteria of 70-130%, the associated samples, and the validation action.

LCS ID	Compound	LCS %R	Validation Action
B292948-BS1	Ethyl Acetate	69.2	The positive and nondetect results for ethyl acetate were qualified as estimated (J-/UJ) with a potential low bias in the associated samples. However, the nondetect results for ethyl acetate in samples SVP-11 and SVP-15 were also qualified as estimated (J) by the laboratory due to detection below the lowest calibration standard and QL; thus, the overall qualification was J for ethyl acetate in these two samples.
	Vinyl Acetate	143	The positive results for vinyl acetate in samples SVP-03, SVP-06, SVP-07, SVP-08, SVP-09, SVP-13, SVP-14, and SVP-15 would have been qualified as estimated (J+) with a potential high bias. However, these results were also qualified as estimated (J) by the laboratory due to detection below the lowest calibration standard and QL. Thus, the overall qualification was J for vinyl acetate in these samples. Qualification was not required for the remaining associated samples since vinyl acetate was not detected.
Associated samples: All samples in this data set.			

Laboratory Duplicate Results

A laboratory duplicate was not performed on a sample from this data set.

Field Duplicate Results

A field duplicate pair was not submitted with this sample set.

Sample Results and Reported Quantitation Limits

Select VOC and APH results were reported below the lowest calibration standard level and QL. These results were qualified as estimated (J) in the associated samples by the laboratory. It should be noted that due to a limitation in the laboratory's software, APH hydrocarbon ranges could not be reported down to the MDL.

Sample calculations were spot-checked; there were no errors noted.

The following table summarizes the dilutions that were required for the VOC and APH analyses; QLs were elevated accordingly.

SDG Number	Sample ID	Parameter	Dilution(s)	Reason for Dilution
21J0956	SVP-01	TO-15, APH	4-fold	4-fold dilutions were performed as part of the laboratory's standard operating procedure for soil vapor samples.
	SVP-02			
	SVP-03			
	SVP-04			
21J0958	SVP-05			
	SVP-06			
	SVP-07			
	SVP-08			
	SVP-09			
	SVP-13			
21J0957	SVP-11	TO-15, APH	4-fold	
	SVP-12			
	SVP-14			
	SVP-15			
	SVP-10	TO-15	4-fold, 40-fold, 300-fold	A 4-fold dilution was performed as part of the laboratory's standard operating procedure for soil vapor samples. A further 40-fold dilution was performed due to the concentrations of target analytes, which exceeded the calibration range in the 4-fold diluted analysis. A further 300-fold dilution was performed due to the concentration of 2,2,4-trimethylpentane, which exceeded the calibration range in the 40-fold diluted analysis. The laboratory combined results from the undiluted and diluted analyses in order to report all results within the calibration range and with the lowest possible QLs.
		APH	4-fold, 40-fold	A 4-fold dilution was performed as part of the laboratory's standard operating procedure for soil vapor samples. A further 40-fold dilution was performed due to the concentrations of benzene, toluene, and C5-C8 aliphatics, which exceeded the calibration range in the 4-fold diluted analysis. The laboratory combined results from the undiluted and diluted analyses in order to report all results within the calibration range and with the lowest possible QLs.

It should be noted that the APH method provides an option to include non-petroleum hydrocarbons in the C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. For this data set, non-petroleum hydrocarbons (if detected in TO-15) were included in the APH C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. Results for C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results would be lower if the non-petroleum hydrocarbon results were removed from the total concentrations for these ranges; however, based on the TO-15 results and the low concentrations of non-petroleum hydrocarbons detected in the samples in this data set, the reduction in concentrations would be minimal. No validation action was taken on this basis.

Target Compound Identification

All criteria were met.

Data Validation Report

Site:	Colonial Pipeline
Laboratory:	Contest Analytical/Pace New England, East Longmeadow, MA
SDG Numbers:	21L1374 (revised 2/25/22), 21L1378 (revised 2/25/22), 21L1379 (revised 2/25/22)
Parameter:	Volatile Organic Compounds (VOCs) and Air-Phase Petroleum Hydrocarbons (APH)
Data Reviewer:	Elizabeth Denly/TRC
Peer reviewer:	Kristen Morin/TRC
Date:	March 3, 2022

Samples Reviewed and Evaluation Summary

SDG 21L1374 (revised 2/25/22)

2 Ambient Air Samples: Ambient-1, Ambient-2

SDG 21L1378 (revised 2/25/22)

4 Soil Vapor Samples SVP-01, SVP-02, SVP-03, SVP-04

SDG 21L1379 (revised 2/25/22)

1 Soil Vapor Sample: Dup-01[1]
1 Trip Blank Sample: Trip Blank

[1]Field duplicate of SVP-04

The above-listed soil vapor, ambient air, and trip blank samples were collected on December 16 and 17, 2021 and were analyzed for VOCs by EPA method TO-15 and APH by Massachusetts Department of Environmental Protection (MassDEP) APH Method, Revision 1. The data validation was performed in accordance with the following guidance, modified for the methodologies utilized:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020

The data were evaluated based on the following parameters:

	• Overall Evaluation of Data and Potential Usability Issues
	• Data Completeness
	• Holding Times and Sample Integrity
*	• Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	• Initial and Continuing Calibrations
	• Blanks
*	• Surrogates
*	• Internal Standards
	• Laboratory Control Sample (LCS) Results
NA	• Laboratory Duplicate Results
*	• Field Duplicate Results
	• Sample Results and Reported Quantitation Limits (QLs)

*	•	Target Compound Identification
*	-	All criteria were met.
NA	-	A laboratory duplicate was not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives. Qualifications applied to the data as a result of sampling error are discussed below.

- The positive results for benzene (TO-15) in samples SVP-01, SVP-03, and DUP-01, and toluene (TO-15 and APH) in samples SVP-01, SVP-03, SVP-04, and DUP-01 were qualified as nondetect due to trip blank contamination.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and APH results that were below the lowest calibration standard and QL; these results were qualified as estimated (J) in the associated samples. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive and nondetect results for ethyl acetate were qualified as estimated (J-/UJ) with a potential low bias in all samples in this data set due to low LCS recoveries. The positive result for ethyl acetate in sample Trip Blank was also qualified as estimated (J) due to detection below the QL; the overall qualification for ethyl acetate in this sample was J. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive and nondetect results for naphthalene (APH) in all samples in this data set were qualified as estimated (J/UJ) due to a calibration nonconformance. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability

- The nondetect results for vinyl acetate were qualified as estimated (UJ) in samples Ambient-1, Ambient-2, SVP-03, and Trip Blank due to a calibration nonconformance. These results can be used for project objectives as nondetects with estimated QLs, which may have a minor impact on the data usability

Data Completeness

The data packages were complete as received by the laboratory with the following exceptions/notes:

- The raw data were not provided for the flow controller pre- and post-sampling flow rates. Thus, the flow controller relative percent differences (RPDs) provided by the laboratory could not be recalculated during validation. The laboratory was contacted during prior validation efforts and stated they did not have the ability to provide the raw values.
- The units for APH hydrocarbon results on the Form 1s within the raw data were incorrectly noted by the laboratory as parts per billion by volume (ppbv) when these results were in fact reported in micrograms per cubic meter ($\mu g/m^3$). The correct units were reported on the Qualified Form 1s that were utilized during validation.

- The integration of the 1,2,3-trimethylbenzene peak in samples SVP-01, SVP-03, and DUP-01 were not performed correctly. The laboratory was contacted during validation and corrected the integration and revised the results for 1,2,3-trimethylbenzene in these samples.
- A discrepancy was noted with the calibration date listed on the initial calibration summary forms, Form 6, for TO-15. However, the calibration information for target analytes that was reported on Form 6 for TO-15 corresponded to the calibration information within the raw data; the laboratory was not contacted about this issue.

No validation actions were required on the basis of these issues.

Holding Times and Sample Integrity

All canister vacuum criteria were met. Holding times were met for the APH analyses. Samples SVP-01, SVP-02, SVP-04, and DUP-01 were analyzed slightly outside the 5-day holding time for acrolein by five to seven hours. Since these samples were analyzed on the fifth day after collection, qualification of the acrolein data was not performed.

GC/MS Tunes

All criteria were met for the TO-15 and APH analyses.

Initial and Continuing Calibrations

The percent relative standard deviations (%RSDs), correlation coefficients, and relative response factors (RRFs) were within the acceptance criteria for target analytes in the initial calibrations (ICs) associated with the samples in this data set, with one exception as follows:

- The %RSD for 1,2,4-trichlorobenzene (39.6%) was outside of the acceptance criteria in the IC associated with samples SVP-01, SVP-02, SVP-04, and DUP-01. Qualification of the data was not required since 1,2,4-trichlorobenzene was not detected in these samples.

Initial calibration verification (ICV) nonconformances were not summarized in this report since the ICV analyses did not immediately precede any sample analyses.

The QL checks in the ICs were within the acceptance criteria for the target analyte (hexane) that was calibrated using linear regression for TO-15.

The RRFs and percent differences or percent drifts (%Ds) were within the acceptance criteria for target analytes in the continuing calibration (CC) standards associated with the samples in this data set with the following exceptions:

- The %D of naphthalene (45.3%) was outside of the acceptance criteria in the CC standard associated with the APH analysis of all samples. The positive and nondetect results for naphthalene (APH) in all samples in this data set were qualified as estimated (J/UJ).
- The %D of vinyl acetate (-32.3%) was outside of the acceptance criteria in the CC standard associated with the TO-15 analysis of samples Ambient-1, Ambient-2, SVP-03, and Trip Blank. The nondetect results for vinyl acetate in these samples were qualified as estimated (UJ).

Blanks

No target compounds were detected in the individual canister certification checks or the associated

method blanks. The following table summarizes the compounds detected in the trip blank sample and the validation actions.

Compound	Concentration Detected	2x Blank Concentration	Validation Actions
Benzene (TO-15)	0.0072 J ppbV	0.0144 ppbV	The positive results for benzene (TO-15) were qualified as nondetect at the QL in samples SVP-01, SVP-03, and DUP-01. Qualification of the data was not required in the remaining samples since benzene (TO-15) was detected at a concentration >2x the blank concentration in these samples
Ethyl acetate	0.14 J ppbV	0.28 ppbV	Qualification of the data was not required since either ethyl acetate was not detected or was detected at a concentration >2x the blank concentration in all samples.
Ethylbenzene (TO-15)	0.017 J ppbV	0.034 ppbV	Qualification of the data was not required since ethylbenzene (TO-15) was detected at a concentration >2x the blank concentration in all samples.
Toluene (TO-15)	0.17 ppbV	0.34 ppbV	The positive results for toluene (TO-15) were qualified as nondetect at the reported concentration in samples SVP-01, SVP-03, SVP-04, and DUP-01. Qualification of the data was not required in the remaining samples since toluene (TO-15) was detected at a concentration >2x the blank concentration in these samples.
m&p-Xylenes (TO-15)	0.017 J ppbV	0.034 ppbV	Qualification of the data was not required since m&p-xylenes (TO-15) were detected at a concentration >2x the blank concentration in all samples.
o-Xylene (TO-15)	0.0056 J ppbV	0.0112 ppbV	Qualification of the data was not required since o-xylene (TO-15) was detected at a concentration >2x the blank concentration in all samples.
Ethylbenzene (APH)	0.016 J ppbV	0.032 ppbV	Qualification of the data was not required since ethylbenzene (APH) was detected at a concentration >2x the blank concentration in all samples.
Toluene (APH)	0.16 ppbV	0.32 ppbV	The positive results for toluene (APH) were qualified as nondetect at the reported concentration in samples SVP-01, SVP-03, SVP-04, and DUP-01. Qualification of the data was not required in the remaining samples since toluene (APH) was detected at a concentration >2x the blank concentration in these samples.
C5-C8 Aliphatics	8.1 µg/m^3	16.2 µg/m^3	Qualification of the data was not required since C5-C8 aliphatics were detected at a concentration >2x the blank concentration in all samples.
C9-C12 Aliphatics	2.8 J µg/m^3	5.6 µg/m^3	Qualification of the data was not required since C9-C12 aliphatics were detected at a concentration >2x the blank concentration in all samples.

Surrogates

All surrogate percent recoveries (%Rs) were within the method acceptance limits for the TO-15 and APH analyses.

Internal Standards

All criteria were met for the TO-15 and APH analyses.

LCS Results

All criteria were met for the APH analyses.

The following table summarizes the TO-15 LCS %Rs that did not meet the acceptance criteria of 70-130%, the associated samples, and the validation action.

LCS ID	Compound	LCS %R	Validation Action
B297672-BS1	Ethyl Acetate	63.1	The positive and nondetect results for ethyl acetate were qualified as estimated (J-/UJ) with a potential low bias in the associated samples. The positive result for ethyl acetate in sample Trip Blank was also qualified as estimated (J) due to detection below the QL; the overall qualification for ethyl acetate in this sample was J.
	Vinyl Acetate	134	Qualification of the data was not required since vinyl acetate was not detected in the associated samples.
Associated samples: Ambient-1, Ambient-2, SVP-03, Trip Blank			
B297752-BS1	Ethyl Acetate	60.6	The nondetect results for ethyl acetate were qualified as estimated (UJ) with a potential low bias in the associated samples.
	n-Butylbenzene	135	Qualification of the data was not required since n-butylbenzene was not detected in the associated samples.
Associated samples: SVP-01, SVP-02, SVP-04, DUP-01			

Laboratory Duplicate Results

A laboratory duplicate was not performed on a sample from this data set.

Field Duplicate Results

Samples SVP-04 and Dup-01 were submitted as the field duplicate pair with this data set. The following table summarizes the RPDs and/or absolute differences (AbsDs), where applicable, of the detected results. All criteria were met.

Compound	QLs (µg/m^3)	SVP-04 (µg/m^3)	Dup-01 (µg/m^3)	RPD (%) or AbsD (µg/m^3)	Validation Action
Acetone	2.9	5.3	4.3	AbsD = 1.0	None; all criteria were met.

Trichlorofluoromethane	0.67	1.4	1.3	AbsD = 0.1	
1,1,2-Trichloro-1,2,2-trifluoroethane	0.92	0.59 J	0.56 J	AbsD = 0.03	
1,2,3-Trimethylbenzene	0.74	0.21 J	0.74 U	AbsD = 0.53	
1,2,4-Trimethylbenzene	0.15	0.92	0.92	AbsD = 0	
1,3,5-Trimethylbenzene	0.15	0.23	0.22	AbsD = 0.01	
m&p-Xylenes (TO-15)	0.26	1.7	1.7	RPD = 0	
o-Xylene (TO-15)	0.13	0.84	0.83	RPD = 1.2	
Benzene (APH)	0.19	0.079 J	0.067 J	AbsD = 0.012	
Ethylbenzene (APH)	0.26	0.37	0.40	AbsD = 0.03	
m&p-Xylenes (APH)	0.52	1.6	1.7	AbsD = 0.1	
o-Xylene (APH)	0.26	0.68	0.71	AbsD = 0.03	
Naphthalene (APH)	0.31	0.37	0.39	AbsD = 0.02	
C5-C8 Aliphatics	6.0	23	27	AbsD = 4	
C9-C12 Aliphatics	6.0	34	32	RPD = 6.1	
C9-C10 Aromatics	3.0	5.4	6.0	AbsD = 0.6	

Field duplicate criteria are as follows:

- RPD ≤ 50 when positive results for both samples are ≥ 5x QL
- AbsD < 2xQL when both results are < 5x QL

Sample Results and Reported Quantitation Limits

Select VOC and APH results were reported below the lowest calibration standard level and QL. These results were qualified as estimated (J) in the associated samples by the laboratory.

Sample calculations were spot-checked; there were no errors noted for the TO-15 and APH analyses.

Based on the canister pressurization factors and volume analyzed, with the exception of the Trip Blank, each sample resulted in dilution factors of 0.6 or 0.8, depending on the analysis. The dilution factor for the Trip Blank was 0.4.

It should be noted that the APH method provides an option to include non-petroleum hydrocarbons in the C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. For this data set, non-petroleum hydrocarbons (if detected in TO-15) were included in the APH C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. Results for C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results would be lower if the non-petroleum hydrocarbon results were removed from the total concentrations for these ranges; however, based on the TO-15 results and the low concentrations of non-petroleum hydrocarbons detected in the samples in this data set, the reduction in concentrations would be minimal. No validation action was taken on this basis.

Target Compound Identification

All criteria were met.

ANALYTICAL RESULTS

Project Location: Huntersville, NC
Date Received: 12/17/2021
Field Sample #: Ambient-2
Sample ID: 21L1374-02
Sample Matrix: Ambient Air
Sampled: 12/17/2021 08:00

Sample Description/Location:
Sub Description/Location:
Canister ID: 2451
Canister Size: 6 liter
Flow Controller ID: 3424
Sample Type: 24 hr

Work Order: 21L1374
Initial Vacuum(in Hg): -29
Final Vacuum(in Hg): -7
Receipt Vacuum(in Hg): -7.2
Flow Controller Type: Fixed-Orifice
Flow Controller Calibration
RPD Pre and Post-Sampling: <20%

Data Validation Report

Site: Colonial Pipeline
Laboratory: Contest Analytical/Pace New England, East Longmeadow, MA
SDG Numbers: 22A0604 (revised 2/23/22), 22A0612 (revised 2/23/22)
Parameter: Volatile Organic Compounds (VOCs) and Air-Phase Petroleum Hydrocarbons (APH)
Data Reviewer: Kristen Morin/TRC
Peer reviewer: Elizabeth Denly/TRC
Date: February 23, 2022

Samples Reviewed and Evaluation Summary

SDG 22A0 04 (revised 2/23/22)

4 Soil Vapor Samples: SVP-01, SVP-02, SVP-03, SVP-04

SDG 22A0 12 (revised 2/23/22)

2 Ambient Air Samples: Ambient-1, Ambient-2
1 Soil Vapor Sample: Dup-01[1]
1 Trip Blank Sample: Trip Blank

[1]Field duplicate of SVP-04

The above-listed soil vapor, ambient air, and trip blank samples were collected on January 11, 2022 and were analyzed for VOCs by EPA method TO-15 and APH by Massachusetts Department of Environmental Protection (MassDEP) APH Method, Revision 1. The data validation was performed in accordance with the following guidance, modified for the methodologies utilized:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020

The data were evaluated based on the following parameters:

	•	Overall Evaluation of Data and Potential Usability Issues
	•	Data Completeness
	•	Holding Times and Sample Integrity
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogates
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
NA	•	Laboratory Duplicate Results
	•	Field Duplicate Results
	•	Sample Results and Reported Quantitation Limits (QLs)
*	•	Target Compound Identification
*	-	All criteria were met.
NA	-	A laboratory duplicate was not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives. Qualifications applied to the data as a result of sampling error are discussed below.

- The positive results for 2-hexanone in samples SVP-04 and Dup-01 were qualified as estimated (J) due to field duplicate variability. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive results for heptane in samples SVP-01, SVP-04, Ambient-1, and Dup-01 were qualified as nondetects (U) due to trip blank contamination. These results can be used for project objectives as nondetects, which may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and APH results that were below the lowest calibration standard and QL; these results were qualified as estimated (J) in the associated samples. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The nondetect results for vinyl acetate were qualified as estimated (UJ) in all samples due to a continuing calibration nonconformance. These results can be used for project objectives as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The nondetect results for ethyl acetate, n-butylbenzene, and sec-butylbenzene were qualified as estimated (UJ) with a potential low bias in all samples in this data set due to low LCS recoveries. These results can be used for project objectives as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive result for acrolein in sample SVP-01 was qualified as estimated (J) with a potential high bias due to a holding time exceedance. This result can be used for project objectives as an estimated value, which may have a minor impact on the data usability.

- The positive results for acrolein in samples SVP-02, SVP-03, SVP-04, Ambient-1, Ambient-2, and Dup-01 were qualified as estimated (J) due to a holding time exceedance and detection below the QL. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

Data Completeness

The data packages were complete as received by the laboratory with the following exceptions/notes:

- The raw data were not provided for the flow controller pre- and post-sampling flow rates. Thus, the flow controller relative percent differences (RPDs) provided by the laboratory could not be recalculated during validation. The laboratory was contacted during prior validation efforts and stated they did not have the ability to provide the raw values.
- The units for APH hydrocarbon results on the Form 1s within the raw data were incorrectly noted by the laboratory as parts per billion by volume (ppbv) when these results were in fact reported in micrograms per cubic meter ($\mu g/m^3$). The correct units were reported on the Qualified Form 1s that were utilized during validation.

- A discrepancy was noted with the calibration date listed on the initial calibration summary form, Form 6, for TO-15. However, the calibration information for target analytes that was reported on Form 6 for TO-15 corresponded to the calibration information within the raw data; the laboratory was not contacted about this issue.
- The flow controller ID for sample Dup-01 was listed on the chain-of-custody (COC) as 44**8** ; however, the flow controller ID for this sample was logged in by the laboratory as 44 **8**. The laboratory was contacted during validation and provided a revised report to correct the flow controller ID for this sample to 4486.
- A flow controller ID was not listed on the COC for the trip blank sample. However, the laboratory logged in the flow controller ID for this sample as 4678. The laboratory also listed this flow controller ID as unused media on the Air Media Sample Receipt Checklist. The laboratory was contacted during validation and confirmed that the flow controller ID was listed in error for the trip blank sample; a revised report was issued to remove the flow controller ID from this sample.
- The raw data for the APH analysis of sample SVP-04 was missing in SDG 22A0604. The laboratory was contacted during validation and provided a revised report with the raw data for this sample.

No validation actions were required on the basis of these issues.

Holding Times and Sample Integrity

All canister vacuum criteria were met. Holding times were met for the APH analyses. As per the work plan, the TO-15 analyses were required to be performed within five days of collection specifically for acrolein due to the potential for the concentration of acrolein to increase in canisters over time because of its reactive nature. Samples in this data set were analyzed six days after collection for acrolein. Therefore, the positive results for acrolein in samples SVP-01, SVP-02, SVP-03, SVP-04, Ambient-1, Ambient-2, and Dup-01 were qualified as estimated (J) with a potential high bias. However, the detections of acrolein in samples SVP-02, SVP-03, SVP-04, Ambient-1, Ambient-2, and Dup-01 were also qualified as estimated due to detection below the QL; thus, the overall qualification was J. Qualification of the data was not required for nondetect results.

GC/MS Tunes

All criteria were met for the TO-15 and APH analyses.

Initial and Continuing Calibrations

All percent relative standard deviations, correlation coefficients, and relative response factors (RRFs) were within the acceptance criteria for target compounds in the initial calibrations (ICs) associated with the samples in this data set.

Initial calibration verification (ICV) nonconformances were not summarized in this report since the ICV analyses did not immediately precede any sample analyses.

The QL check in the IC was within the acceptance criteria for the target analyte (hexane) that was calibrated using linear regression for TO-15.

The RRFs were within the acceptance criteria for target analytes in the continuing calibration (CC) standards associated with the samples in this data set. The following table summarizes the percent differences (%Ds) or percent drifts in the CC standards for target compounds that were not within the acceptance criteria, the associated samples, and the validation action.

CC ID	Compound	%D	Validation Action
S067433-CCV1	Vinyl Acetate	-33.8	The nondetect results for vinyl acetate were qualified as estimated (UJ) in the associated samples.
Associated samples: All samples in this data set.			

Blanks

No target compounds were detected in the individual canister certification checks or the associated method blanks.

The following table summarizes the compounds that were detected in the trip blank sample, the associated samples, and the validation action.

Blank ID	Compound	Blank Concentration	Validation Action
Trip Blank	C5-C8 Aliphatics	4.5 µg/m^3	Qualification of the data was not required since the results for C5-C8 aliphatics were >2x the blank concentration in the associated samples.
	Heptane	0.07 J µg/m3	The positive results for heptane in samples SVP-01, SVP-04, and Dup-01 were qualified as nondetects (U) at the QL since the results were < the QL. The positive result for heptane in sample Ambient-1 was qualified as a nondetect (U) at the reported concentration since the result was > the QL and <2x the blank concentration. Qualification of the data was not required for the remaining associated samples since heptane was either not detected or was detected at a concentration >2x the blank concentration.
Associated samples: All samples in this data set.			

Surrogates

All surrogate percent recoveries (%Rs) were within the method acceptance limits for the TO-15 and APH analyses.

Internal Standards

All criteria were met for the TO-15 and APH analyses.

LCS Results

All criteria were met for the APH analyses.

The following table summarizes the TO-15 LCS %Rs that did not meet the acceptance criteria of 70-130%, the associated samples, and the validation action.

LCS ID	Compound	LCS %R	Validation Action
B299157-BS1	Ethyl Acetate	57.6	The nondetect results for ethyl acetate, n-butylbenzene, and sec-butylbenzene were qualified as estimated (UJ) with a potential low bias in the associated samples.
B299157-BS2	n-Butylbenzene	67.5	
	sec-Butylbenzene	69.3	
Associated samples: All samples in this data set.			

Laboratory Duplicate Results

A laboratory duplicate was not performed on a sample from this data set.

Field Duplicate Results

Samples SVP-04 and Dup-01 were submitted as the field duplicate pair with this data set. The following table summarizes the absolute differences (AbsDs) of the detected results. All criteria (AbsD < 2xQL when one or both results are < 5x QL) were met with the exception of 2-hexanone.

Compound	QLs (µg/m³)	SVP-04 (µg/m³)	Dup-01 (µg/m³)	AbsD (µg/m³)	Validation Action
Acetone	2.9	4.1	5.9	1.8	None; all criteria were met.
Acrolein	0.69	0.56 J	0.56 J	0	
Benzene (TO-15)	0.096	0.048 J	0.056 J	0.008	
2-Butanone	3.5	0.58 J	0.99 J	0.41

Toluene (TO-15)	0.11	0.28	0.28	0	
Trichlorofluoromethane	0.67	1.1	1.0	0.1	
1,1,2-Trichloro-1,2,2-trifluoroethane	0.92	0.37 J	0.37 J	0	
1,2,4-Trimethylbenzene	0.15	0.38	0.38	0	
1,3,5-Trimethylbenzene	0.15	0.077 J	0.083 J	0.006	
m&p-Xylenes (TO-15)	0.26	0.45	0.47	0.02	
o-Xylene (TO-15)	0.13	0.22	0.24	0.02	
Ethylbenzene (APH)	0.26	0.099 J	0.10 J	0.001	
Toluene (APH)	0.23	0.27	0.27	0	
Naphthalene (APH)	0.31	0.21 J	0.16 J	0.05	
m&p-Xylenes (APH)	0.52	0.43 J	0.45 J	0.02	
o-Xylene (APH)	0.26	0.21 J	0.23 J	0.02	
C5-C8 Aliphatics	6.0	25	34	9	
C9-C10 Aromatics	3.0	2.2 J	2.1 J	0.1	
C9-C12 Aliphatics	6.0	11	18	7	
2-Hexanone	0.12	0.14	0.41	0.27	The positive results for 2-hexanone were qualified as estimated (J) in samples SVP-04 and Dup-01.

Sample Results and Reported Quantitation Limits

Select VOC and APH results were reported below the lowest calibration standard level and QL. These results were qualified as estimated (J) in the associated samples by the laboratory.

Sample calculations were spot-checked; there were no errors noted for the TO-15 and APH analyses.

Based on the canister pressurization factors and volume analyzed, each sample except the trip blank resulted in dilution factors of 0.6; the canister pressurization factors and volume analyzed for the trip blank resulted in a dilution factor of 0.4.

It should be noted that the APH method provides an option to include non-petroleum hydrocarbons in the C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. For this data set, non-petroleum hydrocarbons (if detected in TO-15) were included in the APH C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. Results for C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results would be lower if the non-petroleum hydrocarbon results were removed from the total concentrations for these ranges; however, based on the TO-15 results and the low concentrations of non-petroleum hydrocarbons detected in the samples in this data set, the reduction in concentrations would be minimal. No validation action was taken on this basis.

Target Compound Identification

All criteria were met.

Data Validation Report

Site:	Colonial Pipeline
Laboratory:	Contest Analytical/Pace New England, East Longmeadow, MA
SDG Numbers:	22B0471 (revised 3/17/22), 22B1231 (revised 3/17/22), and 22B1233
Parameters:	Volatile Organic Compounds (VOCs) and Air-Phase Petroleum Hydrocarbons (APH)
Data Reviewer:	Kristen Morin/TRC
Peer reviewer:	Elizabeth Denly/TRC
Date:	March 18, 2022

Samples Reviewed and Evaluation Summary

SDG 22B0471 (revised 3/17/22)

2 Ambient Air Samples:	Ambient-1 (2/8/22), Ambient-2
1 Trip Blank Sample:	Trip Blank (2/8/22)

SDG 22B1231 (revised 3/17/22)

4 Soil Vapor Samples:	SVP-01, SVP-02, SVP-03, SVP-04

SDG 22B1233

1 Ambient Air Sample:	Ambient-01 (2/18/22)
1 Soil Vapor Sample:	Dup-01[1]
1 Trip Blank Sample:	Trip Blank (2/17/22)

[1]Field duplicate of SVP-04

The above-listed soil vapor, ambient air, and trip blank samples were collected on February 8, 17, and 18, 2022 and were analyzed for VOCs by EPA method TO-15 and APH by Massachusetts Department of Environmental Protection (MassDEP) APH Method, Revision 1. The data validation was performed in accordance with the following guidance, modified for the methodologies utilized:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020

The data were evaluated based on the following parameters:

	• Overall Evaluation of Data and Potential Usability Issues
	• Data Completeness
	• Holding Times and Sample Integrity
*	• Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	• Initial and Continuing Calibrations
	• Blanks
*	• Surrogates
*	• Internal Standards
	• Laboratory Control Sample (LCS) Results
NA	• Laboratory Duplicate Results
	• Field Duplicate Results

- Sample Results and Reported Quantitation Limits (QLs)

* - Target Compound Identification

* - All criteria were met.

NA - A laboratory duplicate was not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives. Qualifications applied to the data as a result of sampling error are discussed below.

- The positive results for ethyl acetate and C5-C8 aliphatics in samples SVP-04 and Dup-01 were qualified as estimated (J) due to field duplicate variability. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive results for ethyl acetate in samples Ambient-1 (2/8/22) and Ambient-2 were qualified as nondetects (UJ) due to trip blank contamination and low LCS recovery. These results can be used for project objectives as estimated nondetects, which may have a minor impact on the data usability.

- The positive and nondetect results for all TO-15 and APH analytes in sample Ambient-1 (2/8/22) were qualified as estimated (J/UJ) due to a high vacuum after sampling and flow controller calibration variability. These results can be used for project objectives as estimated values and as a nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive results for naphthalene (APH) in samples Ambient-1 (2/8/22) and Ambient-2, hexane in samples SVP-02, SVP-03, and Ambient-01 (2/18/22), and methylene chloride in samples SVP-03 and Ambient-01 (2/18/22) were qualified as nondetects (U) due to trip blank contamination. The result for naphthalene (APH) in sample Ambient-1 (2/8/22) was further qualified as estimated (UJ) due to a high vacuum after sampling and flow controller calibration variability. These results can be used for project objectives as nondetects and as a nondetect with an estimated QL, which may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and APH results that were below the lowest calibration standard and QL; these results were qualified as estimated (J) in the associated samples. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive results for acrolein in samples SVP-02, SVP-03, Ambient-01 (2/18/22), and Dup-01 were qualified as estimated (J) with a potential high bias due to a holding time exceedance. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive results for acrolein in samples SVP-01 and SVP-04 were qualified as estimated (J) due to a holding time exceedance and detection below the QL. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The nondetect results for vinyl acetate in all samples and the nondetect result for

trichlorofluoromethane in sample Trip Blank (2/17/22) were qualified as estimated (UJ) due to continuing calibration nonconformances. These results can be used for project objectives as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive and nondetect results for ethyl acetate in samples Trip Blank (2/8/22), SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), Dup-01, and Trip Blank (2/17/22) were qualified as estimated (J-/UJ) with a potential low bias due to low LCS recoveries. However, the results for ethyl acetate in samples SVP-04 and Dup-01 were also qualified as estimated (J) due to field duplicate variability and/or detection below the QL; thus the overall qualification was J for ethyl acetate in these two samples. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive results for trichlorofluoromethane in samples SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), and Dup-01 were qualified as estimated (J) due to high LCS recovery and a continuing calibration nonconformance. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

Data Completeness

The data packages were complete as received by the laboratory with the following exceptions/notes:

- The raw data were not provided for the flow controller pre- and post-sampling flow rates. Thus, the flow controller relative percent differences (RPDs) provided by the laboratory could not be recalculated during validation. The laboratory was contacted during prior validation efforts and stated they did not have the ability to provide the raw values.
- The units for APH hydrocarbon results on the Form 1s within the raw data were incorrectly noted by the laboratory as parts per billion by volume (ppbv) when these results were in fact reported in micrograms per cubic meter ($\mu g/m^3$). The correct units were reported on the Qualified Form 1s that were utilized during validation.
- A discrepancy was noted with the calibration date listed on the initial calibration summary form, Form 6, for TO-15. However, the calibration information for target analytes that was reported on Form 6 for TO-15 corresponded to the calibration information within the raw data; the laboratory was not contacted about this issue.
- The certification type was missing for the canister used to collect sample Ambient-1 (2/8/22). The laboratory was contacted during validation and provided a revised report to correct this issue.
- Raw data were provided for select TO-15 compounds that was not applicable to the reported results for the samples in SDGs 22B1231 and 22B1233. The laboratory was contacted during validation and confirmed the raw data from instrument S SG (quantitation method EX121121.m) were not applicable; these data were ignored during validation.
- A discrepancy was noted with the results for C9-C10 aromatics and C9-C12 aliphatics in sample SVP-01. The laboratory was contacted during validation and provided a revised report to correct this issue.

No validation actions were required on the basis of these issues.

Holding Times and Sample Integrity

All canister vacuum criteria were met. Holding times were met for the APH analyses. As per the work plan, the TO-15 analyses were required to be performed within five days of collection specifically for acrolein due to the potential for the concentration of acrolein to increase in canisters over time because

of its reactive nature. Samples SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), Trip Blank (2/17/22), and Dup-01 were analyzed six-seven days after collection for acrolein. Therefore, the positive results for acrolein in samples SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), and Dup-01 were qualified as estimated (J) with a potential high bias. However, the detections of acrolein in samples SVP-01 and SVP-04 were also qualified as estimated due to detection below the QL; thus, the overall qualification was J for these two samples. Qualification of the data was not required for nondetect results.

The pre- and post-flow controller calibration RPD exceeded 20% in sample Ambient-1 (2/8/22); the initial and final flow rates (2.73 mL/min and 1.25 mL/min, respectively) resulted in an RPD of 74.4%. The vacuum of this sample after sampling was high at 22.9 inches of mercury. Due to the reduction in flow rate over the sampling period, the canister did not fill properly and the associated sample results may not be representative of the location. The positive and nondetect results for all TO-15 and APH analytes were qualified as estimated (J/UJ) in sample Ambient-1 (2/8/22) due to this issue. It should be noted that this sample was re-collected on February 18, 2022 with no integrity issues.

GC/MS Tunes

All criteria were met for the TO-15 and APH analyses.

Initial and Continuing Calibrations

All percent relative standard deviations, correlation coefficients, and relative response factors (RRFs) were within the acceptance criteria for target compounds in the initial calibrations (ICs) associated with the samples in this data set.

Initial calibration verification (ICV) nonconformances were not summarized in this report since the ICV analyses did not immediately precede any sample analyses.

The QL check in the IC was within the acceptance criteria for the target analyte (hexane) that was calibrated using linear regression for TO-15.

The RRFs were within the acceptance criteria for target analytes in the continuing calibration (CC) standards associated with the samples in this data set. The following table summarizes the percent differences (%Ds) or percent drifts in the CC standards for target compounds that were not within the acceptance criteria, the associated samples, and the validation action.

CC ID	Compound	%D	Validation Action
S068325-CCV1	Vinyl Acetate	-32.1	The nondetect results for vinyl acetate were qualified as estimated (UJ) in the associated samples.
Associated samples: Ambient-1 (2/8/22), Ambient-2, Trip Blank (2/8/22)			
S068623-CCV1	Trichlorofluoromethane	40.5	The positive and nondetect results for trichlorofluoromethane were qualified as estimated (J/UJ) in the associated samples. However, the positive results for trichlorofluoromethane were also qualified as estimated (J) with a potential high bias due to high LCS recovery. Thus, the overall qualification for positive results for trichlorofluoromethane was J.
	Vinyl Acetate	-37.0	The nondetect results for vinyl acetate were qualified as estimated (UJ) in the associated samples.
Associated samples: SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), Dup-01, Trip Blank (2/17/22)			

Blanks

No target compounds were detected in the individual canister certification checks or the associated method blanks.

The following table summarizes the compounds that were detected in the trip blank samples, the associated samples, and the validation action.

Blank ID	Compound	Blank Concentration	Validation Action
Trip Blank (2/8/22)	Ethyl acetate	0.72 µg/m^3	The positive results for ethyl acetate and naphthalene (APH) in samples Ambient-1 (2/8/22) and Ambient-2 were qualified as nondetects (U) at the QL since the results were < the QL; the results for ethyl acetate in these two samples were further qualified as estimated (UJ) with a potential low bias due to low LCS recovery and the result for naphthalene (APH) in sample Ambient-1 (2/8/22) was further qualified as estimated (UJ) due to a high vacuum after sampling and flow controller calibration variability.
	Naphthalene (APH)	0.050 J µg/m^3	
	Toluene (TO-15)	0.048 J µg/m^3	Qualification of the data was not required since the results for toluene (TO-15) and C5-C8 aliphatics were >2x the blank concentration in the associated samples.
	C5-C8 Aliphatics	4.0 µg/m^3	
Associated samples: Ambient-1 (2/8/22), Ambient-2			
Trip Blank (2/17/22)	Hexane	0.38 J µg/m^3	The positive results for hexane in samples SVP-02, SVP-03, and Ambient-01 (2/18/22) were qualified as nondetects (U) at the QL since the results were < the QL. Qualification of the data was not required for the remaining associated samples since hexane was not detected.
	Methylene chloride	0.74 µg/m^3	The positive results for methylene chloride in samples SVP-03 and Ambient-01 (2/18/22) were qualified as nondetects (U) at the reported concentrations since the results were > the QL and < 2x the trip blank concentration. Qualification of the data was not required for the remaining associated samples since methylene chloride was not detected.
Associated samples: SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), Dup-01			

Surrogates

All surrogate percent recoveries (%Rs) were within the method acceptance limits for the TO-15 and APH analyses.

Internal Standards

All criteria were met for the TO-15 and APH analyses.

LCS Results

All criteria were met for the APH analyses.

The following table summarizes the TO-15 LCS %Rs that did not meet the acceptance criteria of 70-130%, the associated samples, and the validation action.

LCS ID	Compound	LCS %R	Validation Action
B301342-BS1	Ethyl Acetate	62.8	The positive results for ethyl acetate in samples Ambient-1 (2/8/22) and Ambient-2 were previously qualified as nondetect (U) due to trip bank contamination; these results were further qualified as estimated (UJ) with a potential low bias. The positive result for ethyl acetate in sample Trip Blank (2/8/22) was qualified as estimated (J-) with a potential low bias.
Associated samples: Ambient-1 (2/8/22), Ambient-2, Trip Blank (2/8/22)			
B302055-BS1	Ethyl Acetate	58.7	The positive and nondetect results for ethyl acetate in the associated samples were qualified as estimated (J-/UJ) with a potential low bias. However, the positive results for ethyl acetate in samples SVP-04 and Dup-01 were also qualified as estimated (J) due to field duplicate variability and/or detection below the QL; thus, the overall qualification was J for ethyl acetate in these two samples.
	Trichloro-fluoromethane	134	The positive results for trichlorofluoromethane in sample samples SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), and Dup-01 would have been qualified as estimated (J) with a potential high bias; however, these results were also qualified as estimated (J) due to a calibration nonconformance and/or a high vacuum after sampling and flow controller variability. Thus, the overall qualification was J. Qualification was not required for sample Trip Blank (2/17/22) since trichlorofluoromethane was not detected in this sample.
Associated samples: SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), Dup-01, Trip Blank (2/17/22)			
B302055-BS2	2,2,4-Trimethylpentane	67.9	Qualification was not required on this basis since the associated samples were re-analyzed for 2,2,4-trimethylpentane on a different day and instrument which had an acceptable LCS %R for 2,2,4-trimethylpentane.
Associated samples: SVP-01, SVP-02, SVP-03, SVP-04, Ambient-01 (2/18/22), Dup-01, Trip Blank (2/17/22)			

Laboratory Duplicate Results

A laboratory duplicate was not performed on a sample from this data set.

Field Duplicate Results

Samples SVP-04 and Dup-01 were submitted as the field duplicate pair with this data set. The following table summarizes the relative percent differences (RPDs) and absolute differences (AbsDs), where applicable, of the detected results. All criteria (RPDs <50% when both results are > 5x the QL and AbsD < 2xQL when one or both results are < 5x QL) were met with the exception of ethyl acetate and C5-C8 aliphatics.

Compound	QLs (µg/m^3)	SVP-04 (µg/m^3)	Dup-01 (µg/m^3)	RPD (%) or AbsD (µg/m^3)	Validation Action
Acetone	2.9	5.2	8.3	AbsD = 3.1	None; all criteria were met.
Acrolein	0.69	0.65 J	1.2	AbsD = 0.55	
2-Butanone	3.5	3.5 U	1.3 J	AbsD = 2.2	
tert-Butyl Alcohol	0.37	0.16 J	0.20 J	AbsD = 0.04	
Chloromethane	0.12	0.088 J	0.41	AbsD = 0.32	
1,4-Dichlorobenzene	0.18	0.35	0.34	AbsD = 0.01	
Dichlorodifluoromethane	0.15	1.2	1.3	RPD = 8.0	
Ethylbenzene (TO-15)	0.13	0.11 J	0.11 J	AbsD = 0.0	
2-Hexanone	0.12	0.17	0.37	AbsD = 0.2	
Isopropanol	2.9	1.4 J	4.9	AbsD = 3.5	

Compound	QLs (µg/m³)	SVP-04 (µg/m³)	Dup-01 (µg/m³)	RPD (%) or AbsD (µg/m³)	Validation Action
4-Methyl-2-pentanone	0.12	0.12 U	0.084 J	AbsD = 0.036	None; all criteria were met.
Naphthalene (TO-15)	0.16	0.33	0.37	AbsD = 0.04	
Styrene	0.13	0.14	0.14	AbsD = 0	
Tetrachloroethylene	0.20	0.39	0.40	AbsD = 0.01	
Toluene (TO-15)	0.11	0.56	0.54	AbsD = 0.02	
Trichlorofluoromethane	0.67	1.6	1.7	AbsD = 0.1	
1,1,2-Trichloro-1,2,2-trifluoroethane	0.92	0.46 J	0.45 J	AbsD = 0.01	
1,2,3-Trimethylbenzene	0.55	0.088 J	0.55 U	AbsD = 0.46	
1,2,4-Trimethylbenzene	0.15	0.29	0.38	AbsD = 0.09	
m&p-Xylenes (TO-15)	0.26	0.43	0.42	AbsD = 0.01	
o-Xylene (TO-15)	0.13	0.17	0.16	AbsD = 0.01	
Ethylbenzene (APH)	0.26	0.10 J	0.11 J	AbsD = 0.01	
Toluene (APH)	0.23	0.53	0.51	AbsD = 0.02	
Naphthalene (APH)	0.31	0.27 J	0.31 J	AbsD = 0.04	
m&p-Xylenes (APH)	0.52	0.40 J	0.40 J	AbsD = 0	
o-Xylene (APH)	0.26	0.16 J	0.15 J	AbsD = 0.01	
C9-C10 Aromatics	3.0	4.4	4.9	AbsD = 0.5	
C9-C12 Aliphatics	6.0	31	40	RPD = 25.4	
Ethyl acetate	1.1	3.8	0.62 J	AbsD = 3.2	The positive results for ethyl acetate and C5-C8 aliphatics were qualified as estimated (J) in samples SVP-04 and Dup-01.
C5-C8 Aliphatics	6.0	24	52	AbsD = 28	

Sample Results and Reported Quantitation Limits

Select VOC and APH results were reported below the lowest calibration standard level and QL. These results were qualified as estimated (J) in the associated samples by the laboratory.

Sample calculations were spot-checked; there were no errors noted for the TO-15 and APH analyses.

Based on the canister pressurization factors and volume analyzed, each sample except sample Ambient-1 (2/8/22) and both trip blanks resulted in dilution factors of 0.6-0.8; the canister pressurization factors and volume analyzed for samples Ambient-1 (2/8/22), Trip Blank (2/8/22), and Trip Blank (2/17/22) resulted in dilution factors of 2.0, 0.4, and 0.4, respectively. Due to the high vacuum, sample Ambient-1 (2/8/22) required a higher pressurization factor and therefore resulted in a higher dilution factor.

It should be noted that the APH method provides an option to include non-petroleum hydrocarbons in the C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. For this data set, non-petroleum hydrocarbons (if detected in TO-15) were included in the APH C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. Results for C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results would be lower if the non-petroleum hydrocarbon results were removed from the total concentrations for these ranges; however, based on the TO-15 results and the low concentrations of non-petroleum hydrocarbons detected in the samples in this data set, the reduction in concentrations would be minimal. No validation action was taken on this basis.

Target Compound Identification

All criteria were met.

Data Validation Report

Site: Colonial Pipeline
Laboratory: Contest Analytical/Pace New England, East Longmeadow, MA
SDG Numbers: 22C1082 (revised 5/25/22) and 22C1083 (revised 5/2/22)
Parameters: Volatile Organic Compounds (VOCs) and Air-Phase Petroleum Hydrocarbons (APH)
Data Reviewer: Kristen Morin/TRC
Peer reviewer: Elizabeth Denly/TRC
Date: May 25, 2022

Samples Reviewed and Evaluation Summary

SDG 22C1082 (revised 5/25/22)

4 Soil Vapor Samples: SVP-01, SVP-02, SVP-03, SVP-04

SDG 22C1083 (revised 5/2/22)

2 Ambient Air Samples: Ambient-01, Ambient-02
1 Soil Vapor Sample: Dup-01[1]
1 Trip Blank Sample: Trip Blank (2/17/22)

[1]Field Duplicate of SVP-04

The above-listed soil vapor, ambient air, and trip blank samples were collected on March 15, 2022 and were analyzed for VOCs by EPA method TO-15 and APH by Massachusetts Department of Environmental Protection (MassDEP) APH Method, Revision 1. The data validation was performed in accordance with the following guidance, modified for the methodologies utilized:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020

The data were evaluated based on the following parameters:

	• Overall Evaluation of Data and Potential Usability Issues
	• Data Completeness
	• Holding Times and Sample Integrity
	• Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	• Initial and Continuing Calibrations
	• Blanks
*	• Surrogates
*	• Internal Standards
	• Laboratory Control Sample (LCS) Results
NA	• Laboratory Duplicate Results
	• Field Duplicate Results
	• Sample Results and Reported Quantitation Limits (QLs)
	• Target Compound Identification

* - All criteria were met.
NA - A laboratory duplicate was not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives. Qualifications applied to the data as a result of sampling error are discussed below.

- The positive and nondetect results for acetone, chloromethane, benzene (TO-15 and APH), cyclohexane, ethylbenzene (TO-15 and APH), heptane, toluene (TO-15 and APH), 2,2,4-trimethylpentane, m&p-xylenes (TO-15 and APH), o-xylene (TO-15), and C5-C8 aliphatics in samples SVP-04 and Dup-01 were qualified as estimated due to field duplicate variability. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive results for hexane and/or methylene chloride in select samples were qualified as nondetects (U) due to trip blank contamination. These results can be used for project objectives as nondetects, which may have a minor impact on the data usability.

- The positive and nondetect results for all TO-15 and APH results in sample SVP-04 were qualified as estimated (J/UJ) due to a potential leak in the canister. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and APH results that were below the lowest calibration standard and QL; these results were qualified as estimated (J) in the associated samples. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive results for 1,2-dichloropropane in sample Ambient-02 and heptane in select samples were qualified as estimated (J) due to detection below the lowest calibration standard and QL and high LCS recovery. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive results for heptane in samples SVP-01, Ambient-01, and Ambient-02 were qualified as estimated (J) with a potential high bias due to high LCS recovery. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive and nondetect results for tert-butyl alcohol (TBA) in all samples were qualified as estimated (J/UJ) to high LCS recovery, a calibration nonconformance, and/or due to detection below the lowest calibration standard and QL. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive and nondetect results for several VOCs in all samples were qualified as estimated (J/UJ) due to continuing calibration nonconformances. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

Data Completeness

The data packages were complete as received by the laboratory with the following exceptions/notes:

- The raw data were not provided for the flow controller pre- and post-sampling flow rates. Thus, the flow controller relative percent differences (RPDs) provided by the laboratory could not be recalculated during validation. The laboratory was contacted during prior validation efforts and stated they did not have the ability to provide the raw values.
- The units for APH hydrocarbon results on the Form 1s within the raw data were incorrectly noted by the laboratory as parts per billion by volume (ppbv) when these results were in fact reported in micrograms per cubic meter ($\mu g/m^3$). The correct units were reported on the Qualified Form 1s that were utilized during validation.
- In both SDGs, a discrepancy was noted with the calibration date listed on the initial calibration summary form, Form 6, for TO-15. However, the calibration information for target analytes that was reported on Form 6 for TO-15 corresponded to the calibration information within the raw data. The laboratory was not contacted about this issue.
- In SDG 22C1083, a discrepancy was noted with the calibration information provided for 2,2,4-trimethylpentane (listed as calibration ID 2200143 on Form 6 and Form 7). During validation it was confirmed that this discrepancy was due to a rounding issue performed by the lab in the true calibration concentrations. However, it was confirmed during validation that the correct calibration information was used to quantitate all sample results; there is no adverse impact on the data usability due to this slight discrepancy. The laboratory was not contacted about this issue.
- In both SDGs, results for 2,2,4-trimethylpentane were not reported on the summary forms for the method blanks or LCSs. The laboratory was contacted during validation and provided revised reports to correct this issue.
- A discrepancy was noted with the dilution factor for the APH analyses of the method blanks in both SDGs and the trip blank sample in SDG 22C1083. The laboratory was contacted during validation and provided revised reports to correct this issue.
- In SDG 22C1082, a discrepancy was noted with the APH C9-C12 aliphatic range in sample SVP-03; a peak was subtracted from the C9-C12 aliphatic range that should not have been. The laboratory was contacted during validation and provided a revised report to correct this issue.

No validation actions were required on the basis of these issues.

Holding Times and Sample Integrity

All canister vacuum and sample integrity criteria were met except as noted below. Holding times were met for the APH and TO-15 analyses; as per the work plan, the TO-15 analyses were performed within five days of collection.

Prior to sampling, the canister vacuum for sample SVP-04 was 22 Hg. Typically, the pre-sampling vacuums are 29-30 Hg when they leave the laboratory. There was eight days between canister receipt by field staff and sampling; as such, the low vacuum indicates that the canister lost some vacuum prior to sampling and may be indicative of a small leak. The positive and nondetect results for all results in the TO-15 and APH analyses of sample SVP-04 were qualified as estimated (J/UJ) due to this issue.

GC/MS Tunes

All criteria were met for the TO-15 and APH analyses with one exception. Sample Ambient-02 was analyzed 40 minutes past the 24-hour GC/MS tune requirement for 2,2,4-trimethylpentane.

Professional judgement was used and no validation actions were taken on this basis since the associated GC/MS tune, continuing calibration (CC) standard, and LCS were within the method acceptance criteria.

Initial and Continuing Calibrations

All correlation coefficients and relative response factors (RRFs) were within the acceptance criteria for target compounds in the initial calibrations (ICs) associated with the samples in this data set.

The following table summarizes the percent relative standard deviation (%RSD) that did not meet the acceptance criteria in one of the ICs associated with the samples in this data set, the associated samples, and the validation actions.

IC	Compound	%RSD	Validation Actions
8/20/21 S SJ	1,2,4-Trichlorobenzene	39.6	Qualification was not required on this basis since 1,2,4-trichlorobenzene was not detected in the associated samples.
Associated sample: All samples in this data set			

Initial calibration verification (ICV) nonconformances were not summarized in this report since the ICV analyses did not immediately precede any sample analyses.

The QL check in the IC was within the acceptance criteria for the target analyte (hexane) that was calibrated using linear regression for TO-15.

The RRFs were within the acceptance criteria for target analytes in the CC standards associated with the samples in this data set. The following table summarizes the percent differences (%Ds) or percent drifts in the CC standards for target compounds that were not within the acceptance criteria, the associated samples, and the validation action.

CC ID	Compound	%D	Validation Action
S069523-CCV1	Ethyl acetate	-31.1	The positive and nondetect results for these compounds were qualified as estimated (J/UJ) in the associated samples.
	Hexachlorobutadiene	-32.7	
	2-Hexanone (MBK)	44.5	
	Methyl methacrylate	30.2	
	4-Methyl-2-pentanone (MIBK)	43.0	
	1,1,2,2-Tetrachloroethane	30.7	
	1,2,4-Trichlorobenzene	-42.8	
	Vinyl Acetate	37.3	
S069523-CCV2	Acrylonitrile	45.2	
	tert-Butyl Alcohol (TBA)	46.2	The positive and nondetect results for TBA in all associated samples were qualified as estimated (J/UJ); however, these results were also qualified as estimated (J) with a potential high bias due to high LCS recovery in all associated samples except Trip Blank and Ambient-02. Thus, the overall qualification was J for positive results.

CC ID	Compound	%D	Validation Action
S069523-CCV2	2,2,4-Trimethylpentane	35.2	No qualification was required for sample Ambient-02 since the result for 2,2,4-trimethylpentane was reported from a different analytical run and was associated with an acceptable CC standard %D. The positive and nondetect results for 2,2,4-trimethylpentane were qualified as estimated (J/UJ) in the remaining associated samples.
Associated samples: All samples in this data set			

Blanks

No target compounds were detected in the individual canister certification checks or the associated method blanks.

The following table summarizes the compounds that were detected in the trip blank sample, the associated samples, and the validation action.

Blank ID	Compound	Blank Concentration	Validation Action
Trip Blank	C5-C8 Aliphatics	4.6 µg/m^3	Qualification of the data was not required since the results for C5-C8 aliphatics and C9-C12 aliphatics were >2x the blank concentration in the associated samples.
	C9-C12 Aliphatics	4.9 µg/m^3	
Trip Blank	Hexane	0.43 J µg/m^3	The positive results for hexane in samples SVP-01, Dup-01, and Ambient-01 were qualified as nondetects (U) at the QL since the results were < the QL. Qualification of the data was not required for the remaining associated samples since hexane was either not detected or detected >2x the blank concentration.
	Methylene chloride	0.43 J µg/m^3	The positive results for methylene chloride in sample SVP-04 and Dup-01 were qualified as nondetects (U) at the QL since the results were < the QL. The positive result for methylene chloride in sample Ambient-01 was qualified as a nondetect (U) at the reported concentration since the result was > the QL and < 2x the blank concentration. Qualification of the data was not required for the remaining associated samples since methylene chloride was either not detected or detected >2x the blank concentration.
Associated samples: All samples in this data set			

Surrogates

All surrogate percent recoveries (%Rs) were within the method acceptance limits for the TO-15 and APH analyses.

Internal Standards

All criteria were met for the TO-15 and APH analyses.

LCS Results

All criteria were met for the APH analyses.

The following table summarizes the TO-15 LCS %Rs that did not meet the acceptance criteria of 70-130%, the associated samples, and the validation action.

LCS ID	Compound	LCS %R	Validation Action
B303914-BS1	1,2-Dichloropropane	133	The positive result for 1,2-dichloropropane in sample Ambient-02 would have been qualified as estimated (J) with a potential high bias; however, this result was also qualified as estimated (J) due to detection below the lowest calibration standard and QL. Thus, the overall qualification was J. Qualification was not required for the remaining associated samples since 1,2-dichloropropane was not detected.
	Heptane	136	The positive results for heptane in all associated samples except Trip Blank were qualified as estimated (J) with a potential high bias; however, these results were also qualified as estimated (J) in samples SVP-02, SVP-03, SVP-04, and Dup-01 due to detection below the lowest calibration standard and QL and/or field duplicate variability. Thus, the overall qualification was J for these samples. Qualification was not required for sample Trip Blank since heptane was not detected.
B303914-BS1	trans-1,3-Dichloropropene	132	Qualification was not required on this basis since the listed compounds were not detected in the associated samples.
	2-Hexanone (MBK)	142	
	Methyl methacrylate	132	
	4-Methyl-2-pentanone (MIBK)	144	
	1,1,2,2-Tetrachloroethane	141	
	Vinyl Acetate	143	
B303914-BS2	Acrylonitrile	140	
	tert-Butyl Alcohol (TBA)	142	The positive results for TBA in all associated samples except Trip Blank and Ambient-02 were qualified as estimated (J) with a potential high bias; however, these results were also qualified as estimated (J) either due to a calibration nonconformance and/or due to detection below the lowest calibration standard and QL. Thus, the overall qualification was J for these samples. Qualification was not required for samples Trip Blank and Ambient-02 since TBA was not detected.
Associated samples: All samples in this data set			

Laboratory Duplicate Results

A laboratory duplicate was not performed on a sample from this data set.

Field Duplicate Results

Samples SVP-04 and Dup-01 were submitted as the field duplicate pair with this data set. The following table summarizes the RPDs and absolute differences (AbsDs), where applicable, of the detected results. All criteria (RPDs ≤50% when both results are ≥ 5x the QL and AbsD < 2xQL when one or both results are < 5x QL) were met with the exception of several compounds as noted in **bold** below.

Compound	QLs (µg/m³)	SVP-04 (µg/m³)	Dup-01 (µg/m³)	RPD (%) or AbsD (µg/m³)	Validation Action
Acetone	2.9	2.9 U	11	**AbsD 8 1**	The positive and nondetect results for acetone and chloromethane in samples SVP-04 and Dup-01 were qualified as estimated (J/UJ).

C9-C12 Aliphatics	6.0	50	55	RPD = 9.5	

Sample Results and Reported Quantitation Limits

Select VOC and APH results were reported below the lowest calibration standard level and QL. These results were qualified as estimated (J) in the associated samples by the laboratory.

Sample calculations were spot-checked; there were no errors noted for the TO-15 and APH analyses.

Based on the canister pressurization factors and volume analyzed, each sample resulted in dilution factors of 0.4-0.6. Sample Ambient-02 was also analyzed at a 4-fold dilution due to the concentration of 2,2,4-trimethylpentane which exceeded the calibration range in the undiluted analysis. Results of the undiluted and diluted analyses were combined by the laboratory in order to report all results within calibration range and with the lowest possible QLs.

It should be noted that the APH method provides an option to include non-petroleum hydrocarbons in the C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. For this data set, non-petroleum hydrocarbons were not included in the APH C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results.

Target Compound Identification

All criteria were met with the following exceptions. The spectral library match was outside of method specifications of >85% for the identification to be made for the following compounds which were subtracted from the C5-C8 aliphatic ranges of the listed samples:

- acetone in the APH analyses of samples SVP-01, SVP-03, and Dup-01; and
- ethyl acetate in the APH analysis of sample Ambient-01.

No validation actions were taken on this basis as the identifications were confirmed to be accurate in the TO-15 analysis.

Data Validation Report

Site: Colonial Pipeline
Laboratory: Contest Analytical/Pace New England, East Longmeadow, MA
SDG Numbers: 22D0897 (revised 06/01/22), 22D0903 (revised 06/01/22), 22D1001
Parameters: Volatile Organic Compounds (VOCs) and Air-Phase Petroleum Hydrocarbons (APH)
Data Reviewer: Kristen Morin/TRC
Peer reviewer: Elizabeth Denly/TRC
Date: June 6, 2022

Samples Reviewed and Evaluation Summary

SDG 22D0897 (revised 0 /01/22)

4 Soil Vapor Samples: SVP-01, SVP-02, SVP-03, SVP-04

SDG 22D0903 (revised 0 /01/22)

1 Soil Vapor Sample: Dup-01 (Field Duplicate of SVP-04)
1 Trip Blank Sample: Trip Blank

SDG 22D1001

2 Ambient Air Samples: Ambient-01, Ambient-02

The above-listed soil vapor, ambient air, and trip blank samples were collected on April 12, 2022 and were analyzed for VOCs by EPA method TO-15 and APH by Massachusetts Department of Environmental Protection (MassDEP) APH Method, Revision 1. The data validation was performed in accordance with the following guidance, modified for the methodologies utilized:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020

The data were evaluated based on the following parameters:

	•	Overall Evaluation of Data and Potential Usability Issues
	•	Data Completeness
	•	Holding Times and Sample Integrity
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogates
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
NA	•	Laboratory Duplicate Results
	•	Field Duplicate Results
	•	Sample Results and Reported Quantitation Limits (QLs)
	•	Target Compound Identification
*	-	All criteria were met.
NA	-	A laboratory duplicate was not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives. Qualifications applied to the data as a result of sampling error are discussed below.

- The positive results for hexane in samples SVP-02, SVP-04, Dup-01, Ambient-01, and Ambient-02 were qualified as nondetects (U) due to trip blank contamination. These results can be used for project objectives as nondetects, which may have a minor impact on the data usability.

- The positive results for C9-C12 aliphatics in samples SVP-04 and Dup-01 were qualified as estimated (J) due to field duplicate variability. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and APH results that were below the lowest calibration standard and QL; these results were qualified as estimated (J) in the associated samples. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive result for acrolein in sample SVP-03 was qualified as estimated (J) with a potential high bias due to a holding time exceedance. This result can be used for project objectives as an estimated value, which may have a minor impact on the data usability.

- The nondetect results for acrylonitrile in all samples, and ethyl acetate, hexachlorobutadiene, and 1,2,4-trichlorobenzene in sample SVP-03 were qualified as estimated (UJ) with a potential low bias due to low LCS recoveries. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The nondetect results for benzyl chloride in all samples except SVP-03, acrylonitrile in all samples, and ethyl acetate and 1,2,4-trichlorobenzene in sample SVP-03 were qualified as estimated (UJ) due to continuing calibration nonconformances. These results can be used for project objectives as nondetects with estimated QLs, which may have a minor impact on the data usability.

Data Completeness

The data packages were complete as received by the laboratory with the following exceptions/notes:

- The raw data were not provided for the flow controller pre- and post-sampling flow rates. Thus, the flow controller relative percent differences (RPDs) provided by the laboratory could not be recalculated during validation. The laboratory was contacted during prior validation efforts and stated they did not have the ability to provide the raw values.
- The units for APH hydrocarbon results on the Form 1s within the raw data were incorrectly noted by the laboratory as parts per billion by volume (ppbv) when these results were in fact reported in micrograms per cubic meter ($\mu g/m^3$). The correct units were reported on the Qualified Form 1s that were utilized during validation.
- In SDGs 22D0897 and 22D0903, the Lab Receipt Pressure fields on the chain-of-custody (COC) were not completed by the laboratory. However, this information was reported on the sample Analytical Results and Sample Receipt Checklist pages. The laboratory was not contacted about this issue.

- In SDG 22D0897, the laboratory did not report TO-15 tentatively identified compounds (TICs) as per prior communication with the project team for sample SVP-03. The laboratory was contacted during validation and provided a revised report to correct this issue.
- In SDG 22D0903, the final vacuum in the field was recorded on the COC as 3 Hg. However, the Analytical Results and Sample Receipt Checklist pages listed the final vacuum in the field as -5 Hg. Since both final vacuum field records were within 5 Hg of the lab receipt vacuum, the laboratory was not contacted about this issue.
- In SDG 22D0903, a discrepancy was noted with the dilution factor for acrylonitrile in sample Dup-01. The laboratory was contacted during validation and provided a revised report to correct this issue.
- In SDG 22D1001, a discrepancy was noted with the flow controller and canister IDs for sample Ambient-0; the flow controller and canister IDs were inadvertently swapped and written in the wrong fields on the COC. Also, the canister ID (inadvertently listed under flow controller ID on the COC) for this sample was written on the COC as 218 but the canister ID was recorded by the laboratory as 2183 on the Sample Receipt Checklist, Analytical Results, and Media Certificate of Analysis pages. The canister ID written on the COC (inadvertently listed under flow controller ID on the COC) was likely missing the last number (3); the laboratory was not contacted about this issue.

No validation actions were required on the basis of these issues.

Holding Times and Sample Integrity

All canister vacuum criteria were met. Holding times were met for the APH analyses. As per the work plan, the TO-15 analyses were required to be performed within five days of collection specifically for acrolein due to the potential for the concentration of acrolein to increase in canisters over time because of its reactive nature. Sample SVP-03 was analyzed eight days after collection for acrolein. Therefore, the positive result for acrolein in sample SVP-03 was qualified as estimated (J) with a potential high bias.

GC/MS Tunes

All criteria were met for the TO-15 and APH analyses.

Initial and Continuing Calibrations

All correlation coefficients and relative response factors (RRFs) were within the acceptance criteria for target compounds in the initial calibrations (ICs) associated with the samples in this data set.

The following table summarizes the percent relative standard deviation (%RSD) that did not meet the acceptance criteria in one of the ICs associated with the samples in this data set, the associated samples, and the validation actions.

IC	Compound	%RSD	Validation Actions
8/20/21 S SJ	1,2,4-Trichlorobenzene	39.6	Qualification was not required on this basis since 1,2,4-trichlorobenzene was not detected in the associated sample.
Associated sample: SVP-03			

Initial calibration verification (ICV) nonconformances were not summarized in this report since the ICV analyses did not immediately precede any sample analyses.

The QL checks in the ICs were within the acceptance criteria for the target analyte (hexane) that was calibrated using linear regression for TO-15.

The RRFs were within the acceptance criteria for target analytes in the continuing calibration (CC) standards associated with the samples in this data set. The following table summarizes the percent differences (%Ds) or percent drifts in the CC standards for target compounds that were not within the acceptance criteria, the associated samples, and the validation action.

CC ID	Compound	%D	Validation Action
S070556-CCV1	Benzyl chloride	36.2	The nondetect results for benzyl chloride were qualified as estimated (UJ) in the associated samples.
Associated samples: All samples in this data set except SVP-03			
S070571-CCV1	Acrylonitrile	-33.2	The nondetect results for acrylonitrile were qualified as estimated (UJ) in the associated samples.
Associated samples: All samples in this data set			
S070596-CCV1	Ethyl Acetate	-43.8	The nondetect results for ethyl acetate and 1,2,4-trichlorobenzene were qualified as estimated (UJ) in sample SVP-03.
	1,2,4-Trichlorobenzene	-38.4	
Associated sample: SVP-03			

Blanks

No target compounds were detected in the individual canister certification checks or the associated method blanks.

The following table summarizes the compounds that were detected in the trip blank sample, the associated samples, and the validation action.

Blank ID	Compound	Blank Concentration	Validation Action
Trip Blank	C5-C8 Aliphatics	6.6 µg/m^3	Qualification of the data was not required since the results for C5-C8 aliphatics were >2x the blank concentration in the associated samples.
	Hexane	0.59 J µg/m^3	The positive results for hexane in samples SVP-02, SVP-04, Dup-01, Ambient-01, and Ambient-02 were qualified as nondetects (U) at the QL since the results were < the QL. Qualification of the data was not required for the remaining associated samples since hexane was not detected.
Associated samples: All samples in this data set			

Surrogates

All surrogate percent recoveries (%Rs) were within the method acceptance limits for the TO-15 and APH analyses.

Internal Standards

All criteria were met for the TO-15 and APH analyses.

LCS Results

All criteria were met for the APH analyses.

The following table summarizes the TO-15 LCS %Rs that did not meet the acceptance criteria of 70-

130%, the associated samples, and the validation action.

LCS ID	Compound	LCS %R	Validation Action
B306258-BS1	Acrylonitrile	65.6	The nondetect results for acrylonitrile in all samples were qualified as estimated (UJ) with a potential low bias.
Associated samples: All samples in this data set			
B306302-BS1	Ethyl Acetate	60.7	The nondetect results for ethyl acetate, hexachlorobutadiene, and 1,2,4-trichlorobenzene in sample SVP-03 were qualified as estimated (UJ) with a potential low bias.
	Hexachlorobutadiene	68.7	
	1,2,4-Trichlorobenzene	59.7	
Associated sample: SVP-03			

Laboratory Duplicate Results

A laboratory duplicate was not performed on a sample from this data set.

Field Duplicate Results

Samples SVP-04 and Dup-01 were submitted as the field duplicate pair with this data set. The following table summarizes the RPDs and absolute differences (AbsDs), where applicable, of the detected results. All criteria (RPDs ≤50% when both results are ≥ 5x the QL and AbsD < 2xQL when one or both results are < 5x QL) were met except as noted for C9-C12 aliphatics.

Compound	QLs (µg/m³)	SVP-04 (µg/m³)	Dup-01 (µg/m³)	RPD (%) or AbsD (µg/m³)	Validation Action
Acetone	2.9	4.1	4.6	AbsD = 0.50	None; all criteria were met.
Acrolein	0.69	0.53 J	0.58 J	AbsD = 0.05	
2-Butanone	3.5	3.5 U	1.1 J	AbsD = 2.4	
tert-Butyl Alcohol	0.37	0.37 U	0.17 J	AbsD = 0.20	
Carbon Tetrachloride	0.19	0.18 J	0.19 U	AbsD = 0.01	
Chloromethane	0.12	0.061 J	0.12 U	AbsD = 0.059	
1,4-Dichlorobenzene	0.18	0.27	0.27	AbsD = 0	
Dichlorodifluoromethane	0.15	2.3	2.4	RPD = 4.3	
Ethylbenzene (TO-15)	0.13	0.29	0.30	AbsD = 0.01	
4-Methyl-2-pentanone	0.12	0.12 U	0.18	AbsD = 0.06	
Naphthalene (TO-15)	0.16	1.1	1.1	RPD = 0	
Styrene	0.13	0.14	0.15	AbsD = 0.01	
Toluene (TO-15)	0.11	0.56	0.57	RPD = 1.8	
Trichlorofluoromethane	0.67	1.3	1.3	AbsD = 0	
1,1,2-Trichloro-1,2,2-trifluoroethane	0.92	0.60 J	0.58 J	AbsD = 0.02	
1,2,3-Trimethylbenzene	0.55	0.23 J	0.24 J	AbsD = 0.01	
1,2,4-Trimethylbenzene	0.15	1.1	1.1	RPD = 0	
1,3,5-Trimethylbenzene	0.15	0.27	0.26	AbsD = 0.01	
m&p-Xylenes (TO-15)	0.26	1.3	1.3	RPD = 0	
o-Xylene (TO-15)	0.13	0.69	0.69	RPD = 0	
Benzene (APH)	0.19	0.067 J	0.19 U	AbsD = 0.12	
Ethylbenzene (APH)	0.26	0.27	0.26	AbsD = 0.01	
Toluene (APH)	0.23	0.55	0.53	AbsD = 0.02	
Naphthalene (APH)	0.31	0.80	0.84	AbsD = 0.04	
m&p-Xylenes (APH)	0.52	1.3	1.2	RPD = 0.10	

Compound	QLs (µg/m^3)	SVP-04 (µg/m^3)	Dup-01 (µg/m^3)	RPD (%) or AbsD (µg/m^3)	Validation Action
o-Xylene (APH)	0.26	0.60	0.59	AbsD = 0.01	None; all criteria were met.
C5-C8 Aliphatics	6.0	26	33	AbsD = 7.0	
C9-C10 Aromatics	3.0	8.3	8.4	AbsD = 0.10	
C9-C12 Aliphatics	6.0	29	41	AbsD = 12	The positive results for C9-C12 aliphatics in samples SVP-04 and Dup-01 were qualified as estimated (J).

Sample Results and Reported Quantitation Limits

Select VOC and APH results were reported below the lowest calibration standard level and QL. These results were qualified as estimated (J) in the associated samples by the laboratory.

Sample calculations were spot-checked; there were no errors noted for the TO-15 and APH analyses.

Based on the canister pressurization factors and volume analyzed, each sample resulted in dilution factors of 0.4-0.8.

It should be noted that the APH method provides an option to exclude non-petroleum hydrocarbons in the C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. For this data set, non-petroleum hydrocarbons were not included in the APH C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results.

Target Compound Identification

All criteria were met with the following exceptions. The spectral library match was outside of method specifications of >85% for the identification to be made for the following compounds which were subtracted from the C5-C8 aliphatic ranges of the listed samples:

- ethyl acetate in the APH analysis of sample SVP-02; and
- acetone in the APH analysis of sample Ambient-02.

No validation actions were taken on this basis as the identifications were confirmed to be accurate in the TO-15 analysis.

The following compounds could not be reported as target analytes for method TO-15 due to laboratory limitations: allyl chloride, chlorodifluoromethane, ethyl tert-butyl ether, isopropyl ether, and vinyl bromide. The laboratory performed TIC library searches to check for the presence of these compounds; these compounds were not identified in the samples in this data set.

Data Validation Report

Site:	Colonial Pipeline
Laboratory:	Contest Analytical/Pace New England, East Longmeadow, MA
SDG Numbers:	22E0955 (Revised 8/4/22), 22E0957 (Revised 8/4/22)
Parameters:	Volatile Organic Compounds (VOCs) and Air-Phase Petroleum Hydrocarbons (APH)
Data Reviewer:	Kristen Morin/TRC
Peer reviewer:	Elizabeth Denly/TRC
Date:	August 4, 2022

Samples Reviewed and Evaluation Summary

SDG 22E0955 (Revised 8/4/22)

1 Soil Vapor Sample:	Dup-01 (Field Duplicate of SVP-04)
1 Trip Blank Sample:	Trip Blank

SDG 22E0957 (Revised 8/4/22)

4 Soil Vapor Samples:	SVP-01, SVP-02, SVP-03, SVP-04

The above-listed soil vapor and trip blank samples were collected on May 11, 2022 and were analyzed for VOCs by EPA method TO-15 and APH by Massachusetts Department of Environmental Protection (MassDEP) APH Method, Revision 1. The data validation was performed in accordance with the following guidance, modified for the methodologies utilized:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020

The data were evaluated based on the following parameters:

	•	Overall Evaluation of Data and Potential Usability Issues
	•	Data Completeness
	•	Holding Times and Sample Integrity
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogates
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
NA	•	Laboratory Duplicate Results
	•	Field Duplicate Results
	•	Sample Results and Reported Quantitation Limits (QLs)
	•	Target Compound Identification
*	-	All criteria were met.
NA	-	A laboratory duplicate was not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives. Qualifications applied to the data as a result of sampling

error are discussed below.

- The positive results for hexane in samples SVP-01, SVP-02, SVP-03, and SVP-04 were qualified as nondetects (U) due to trip blank contamination. These results can be used for project objectives as nondetects, which may have a minor impact on the data usability.

- The positive and nondetect results for benzene (TO-15), tert-butyl alcohol, cyclohexane, 1,2-dichloroethane, ethyl acetate, ethylbenzene (TO-15), heptane, isopropanol, 4-methyl-2-pentanone (MIBK), propylbenzene, styrene, toluene (TO-15), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, m&p-xylenes (TO-15), o-xylene (TO-15), benzene (APH), ethylbenzene (APH), toluene (APH), m&p-xylenes (APH), o-xylene (APH), C5-C8 aliphatics, and C9-C10 aromatics in samples SVP-04 and Dup-01 were qualified as estimated (J/UJ) due to field duplicate variability. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and APH results that were below the lowest calibration standard and QL; these results were qualified as estimated (J) in the associated samples. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive and nondetect results for benzyl chloride and naphthalene (TO-15) were qualified as estimated (J/UJ) in all samples due to continuing calibration nonconformances. These results can be used for project objectives as estimated values and as nondetects with estimated QLs, which may have a minor impact on the data usability.

- The positive results for 1,4-dichlorobenzene in samples SVP-04 and DUP-01 were qualified as estimated (J) with a potential high bias due to high LCS recovery. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The positive results for C9-C12 aliphatics in sample SVP-04, and C5-C8 aliphatics and C9-C12 aliphatics in sample Dup-01 were qualified as estimated (J) due to spectral library matches outside of method specifications for tentatively identified compounds (TICs) that were subtracted out of the APH ranges. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

Data Completeness

The data packages were complete as received by the laboratory with the following exceptions/notes:

- The raw data were not provided for the flow controller pre- and post-sampling flow rates. Thus, the flow controller relative percent differences (RPDs) provided by the laboratory could not be recalculated during validation. The laboratory was contacted during prior validation efforts and stated they did not have the ability to provide the raw values.
- The units for APH hydrocarbon results on the Form 1s within the raw data were incorrectly noted by the laboratory as parts per billion by volume (ppbv) when these results were in fact reported in micrograms per cubic meter ($\mu g/m^3$). The correct units were reported on the Qualified Form 1s that were utilized during validation.
- In SDG 22E0955, two ambient air samples (Ambient-01 and Ambient-02) were collected and submitted to the laboratory but were not reported due to an issue with the canisters.

- In SDG 22E0955, a discrepancy was noted with the TO-15 dilution factor for the trip blank sample. The laboratory was contacted during validation and provided a revised level II report to correct this issue; a revised Level 4 data package was not provided.
- In both SDGs, the raw data for the GC/MS tune performed prior to the initial calibration on instrument S SK on 3/6/22 was not provided by the laboratory. The laboratory stated on the Non-Conformance Form within the raw data for this initial calibration that the tune passed requirements. The laboratory was not asked to provide the missing raw data since the samples were analyzed on a different date and associated with a different GC/MS tune; the raw data were provided and all criteria were met for the GC/MS tune that was analyzed on the same day as the samples.

No validation actions were required on the basis of these issues.

Holding Times and Sample Integrity

Prior to sampling, the canister vacuum for sample Dup-01 was 26 Hg. Typically, the pre-sampling vacuums are 29-30 Hg when they leave the laboratory. Since the flow controller and canister vacuum criteria were met and since the canister vacuum was only slightly below the typical pre-sampling vacuum for this sample, no validation actions were taken on this basis. All canister vacuum criteria were met for the remaining samples.

Holding times were met for the APH analyses. As per the work plan, the TO-15 analyses were required to be performed within five days of collection specifically for acrolein due to the potential for the concentration of acrolein to increase in canisters over time because of its reactive nature. Samples were analyzed 13.5-18.5 hours after the 5-day holding time (120 hours) expired for acrolein; however, since samples were analyzed on the 5th day after collection but less than six days (144 hours) after collection for acrolein, no validation actions were taken on this basis.

GC/MS Tunes

All criteria were met for the TO-15 and APH analyses.

Initial and Continuing Calibrations

All percent relative standard deviations, correlation coefficients, and relative response factors (RRFs) were within the acceptance criteria for target compounds in the initial calibrations (ICs) associated with the samples in this data set. The QL check in the IC was within the acceptance criteria for the target analyte (hexane) that was calibrated using linear regression for TO-15.

Initial calibration verification (ICV) nonconformances were not summarized in this report since the ICV analyses did not immediately precede any sample analyses.

The RRFs were within the acceptance criteria for target analytes in the continuing calibration (CC) standards associated with the samples in this data set. The following table summarizes the percent differences (%Ds) or percent drifts in the CC standards for target compounds that were not within the acceptance criteria, the associated samples, and the validation action.

CC ID	Compound	%D	Validation Action
S071603-CCV1	Benzyl chloride	31.9	The positive and nondetect results for benzyl chloride and naphthalene (TO-15) were qualified as estimated (J/UJ) in the associated samples.
	Naphthalene (TO-15)	-34.1	
Associated samples: All samples in this data set			

Blanks

No target compounds were detected in the individual canister certification checks or the associated method blanks.

The following table summarizes the compounds that were detected in the trip blank sample, the associated samples, and the validation action.

Blank ID	Compound	Blank Concentration	Validation Action
Trip Blank	C5-C8 Aliphatics	4.3 µg/m^3	Qualification of the data was not required since the results for C5-C8 aliphatics were >2x the blank concentration in the associated samples.
	Hexane	0.74 J µg/m^3	The positive results for hexane in samples SVP-01, SVP-02, SVP-03, and SVP-04 were qualified as nondetects (U) at the QL since the results were < the QL. Qualification of the data was not required for sample Dup-01 since hexane was detected >2x the blank concentration.
Associated samples: All samples in this data set			

Surrogates

All surrogate percent recoveries (%Rs) were within the method acceptance limits for the TO-15 and APH analyses.

Internal Standards

All criteria were met for the TO-15 and APH analyses.

LCS Results

All criteria were met for the APH analyses.

The following table summarizes the TO-15 LCS %Rs that did not meet the acceptance criteria of 70-130%, the associated samples, and the validation action.

LCS ID	Compound	LCS %R	Validation Action
B308608-BS1	Benzyl chloride	157	No qualification was required since benzyl chloride was not detected in the associated samples.
	1,4-Dichlorobenzene	139	The positive results for 1,4-dichlorobenzene in samples SVP-04 and DUP-01 were qualified as estimated (J) with a potential high bias. No qualification was required for the remaining associated samples since 1,4-dichlorobenzene was not detected.
Associated samples: All samples in this data set			

Laboratory Duplicate Results

A laboratory duplicate was not performed on a sample from this data set.

Field Duplicate Results

Samples SVP-04 and Dup-01 were submitted as the field duplicate pair with this data set. The following table summarizes the RPDs and absolute differences (AbsDs), where applicable, of the detected

results. All criteria (RPDs ≤50% when both results are ≥ 5x the QL and AbsD < 2xQL when one or both results are < 5x QL) were met except as noted for several compounds in **bold** below.

Compound	QLs (µg/m³)	SVP-04 (µg/m³)	Dup-01 (µg/m³)	RPD (%) or AbsD (µg/m³)	Validation Action

Sample Results and Reported Quantitation Limits

Select VOC and APH results were reported below the lowest calibration standard level and QL. These

results were qualified as estimated (J) in the associated samples by the laboratory.

Sample calculations were spot-checked; there were no errors noted for the TO-15 and APH analyses.

Based on the canister pressurization factors and volume analyzed, each sample resulted in dilution factors of 0.4-0.6.

It should be noted that the APH method provides an option to exclude non-petroleum hydrocarbons in the C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results. For this data set, non-petroleum hydrocarbons were not included in the APH C5-C8 aliphatic and C9-C12 aliphatic hydrocarbon range results.

Target Compound Identification

All criteria were met with the following exceptions. The spectral library matches were slightly outside of method specifications of >85% for the identification to be made for the following compounds which were subtracted from the ranges noted below of the listed samples:

- 1-hexanol, 2-ethyl- which was subtracted from the C9-C12 aliphatic range in the APH analysis of sample SVP-04 (spectral match 78%);
- isopropyl alcohol which was subtracted from the C5-C8 aliphatic range in the APH analysis the APH analysis of sample DUP-01 (spectral match 78%); and
- nonanal which was subtracted from the C9-C12 aliphatic range in the APH analysis the APH analysis of sample DUP-01 (spectral match 72%).

No validation actions were taken on this basis for isopropyl alcohol as the identification was confirmed to be accurate in the TO-15 analysis of sample DUP-01.

Since the remaining TIC identifications listed above were not confirmed to be accurate in the corresponding TO-15 analysis and since the spectral library matches were outside of method specifications, the positive results for the ranges that the TICs were subtracted from, the C9-C12 aliphatic range in sample SVP-04 and the C5-C8 aliphatic and C9-C12 aliphatic ranges in sample Dup-01, were qualified as estimated (J).

The following compounds could not be reported as target analytes for method TO-15 due to laboratory limitations: allyl chloride, chlorodifluoromethane, ethyl tert-butyl ether, isopropyl ether, and vinyl bromide. The laboratory performed tentatively identified compound library searches to check for the presence of these compounds in the samples; these compounds were not identified in the samples in this data set.

Notes:

	Sample collected, results pending
x	Rainfall event (Rain > 1-inch within 24-hour period)
U	Not present above the associated level; blank contamination exists
Bold Values	Bold values indicate compound was detected above laboratory reporting limit

RE: Project: CPC HUNTERSVILLE SW
Pace Project No.: 92604307

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on May 12, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Charlotte

A revised report is being issued on 6/2/22 to include GRO reanalysis results.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Taylor M Cannon for
Bonnie Vang

QUALIFIERS

Project: CPC HUNTERSVILLE SW
Pace Project No.: 92604307

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.

RE: Project: CPC Huntersville (SW-Seep-1)
Pace Project No.: 92605777

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on May 12, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com
(704)875-9092
Project Manager

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Pace Analytical Services, LLC
9800 Kincey Ave. Suite 100
Huntersville, NC 28078
(704)875-9092

QUALIFIERS

Project: CPC Huntersville (SW-Seep-1)
Pace Project No.: 92605777

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

CLIENT NOTIFICATION/RESOLUTION

Client would like to re-run 8260 on Seep-1 Confluence and also requested a level IV data package.
PM had to re-log Seep-1 Confluence under a new WO# 92605777 and report the level IV report.

Concurrence[1]:	Zachary Neigh, AECOM	Date:	06/21/2022

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
1. Were holding times met?	✓			8260D and 8015C: ≤14 days (preserved).	
2. Were sample storage and preservation requirements met?	✓			• The temperature of containers upon receipt at the laboratory met EPA storage requirements of ≤6°C. • Zero headspace was observed in VOA vials containing all water samples at time of analysis. • The laboratory verified that samples were properly preserved for all parameters.	
3. Were measurement results for all project-specified target analytes reported?	✓				
4. Were project-specified Reporting Limits Objectives achieved?	✓				
5. Do sample prep dates occur before analytical dates?	✓				
6. Was a method blank analyzed with each batch?	✓				
8. Were target analytes reported in the laboratory blanks above the DL?	✓			8015C: Method Blank 3650684[2]: Gas Range Organics (C6-C10) @ 0.036 J ug/L (RL 0.08, DL 0.034)	
9. Were target analytes reported in field blank analyses (e.g., trip, ~~ambient, field, or~~ equipment) above the DL?		✓			
10. Were analytes detected in samples at concentrations below the BCAL?	✓			BCAL: Gas Range Organics (C6-C10) @ 0.18 ug/L Associated detected sample results below the BCAL are qualified due the presence of blank contamination. The sample detetction limit was elevated to the amount found in the sample and the result was U-flagged.	U
11. Was a field duplicate analyzed?		✓		DUP-1-20220512 is the field duplicate of SW-19-20220512	
12. Was precision deemed acceptable as defined by DV Guidelines?			✓	Precision could not be evaluated as all results were non-detect.	
13. Was a LCS analyzed with each batch?	✓				
14. Were LCS' recoveries within lab/project[3] specifications?	✓			LCS only	
15. Were LCS/LCSD RPD within lab specifications?			✓		
16. Was a MS/MSD pair analyzed with each batch?	✓				
17. Is the MS/MSD parent sample a project-specific sample? *Only project-specific samples have been listed.*	✓			• 8015: 92604307002 (SW-3-20220512), MS/MSD • 8260D: 92604307002 (SW-3-20220512), MS/MSD	

[1] Lead verifier
[2] Associated samples: 92604307002 and 92604307008
[3] For best data management practice, recovery should fall within the more stringent of laboratory control limits OR 60 to 140% of the true value.

Data Validation Checklist (Continued)

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
18. Were MS/MSD recoveries within lab and project[2] specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*	✓				
19. Were MS/MSD RPD within lab specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*	✓				
20. Was a post digestion spike analyzed for inorganics? *Only project-specific samples have been listed.*			✓		
21. Was a project-specific sample selected by the laboratory for the post digestion spike analysis?			✓		
22. Were post-digestion spike recoveries within lab/project specifications? *Only QC results for project samples are evaluated.*			✓		
23. Was a serial dilution analysis for inorganics?			✓		
24. Is the serial dilution parent sample a project-specific sample? *Only project-specific samples have been listed.*			✓		
25. Is the percent difference between the serially diluted result and undiluted result less 10% (for those analytes with native concentrations greater than 50x the DL)? *Only QC results for project samples are evaluated.*			✓		
26. Was a laboratory duplicate analyzed?		✓			
27. Is the laboratory duplicate sample a project-specific sample? *Only project-specific samples have been listed.*			✓		
28. Do laboratory duplicate results meet lab specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*	✓				
29. For organics, were initial and continuing calibration standards analyzed at the lab/project-specified frequency for each instrument?			✓	Not evaluated; not part of the scope of work.	
30. Were tuning and a calibration results within laboratory, method, and project specifications?			✓	Not evaluated; not part of the scope of work.	
31. Were surrogate recoveries within lab specifications?	✓				
32. Were internal standard results within lab specifications?			✓	Not evaluated; not part of the scope of work.	
33. Were sample results, which were determined by GC/HPLC, confirmed using a second column of dissimilar stationary phase or detector, and the %D between primary and secondary results less than 40 for all detected analytes?			✓		
34. Were TIC reported and were reported results qualified as estimated concentrations?			✓		
35. Is the moisture content in any soil/sediment sample greater than 70%? If yes, then results should be reported on a wet-weight basis.			✓		

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
36. Were lab comments included in report? If yes, summarize contents or attach a copy of the narrative.		✓			

Comments:

All sample concentrations that are less than the RL but greater than the MDL are considered estimated (J-flagged).

The data review process was modeled after the *USEPA CLP NFG for Superfund Organic Methods Data Review* (EPA, November 2020). Sample results have been qualified based on the results of the data review process (**Attachment C)**. In performing the data evaluation, AECOM assumed that the data reported by the laboratory are complete, compliant, and an accurate representation of the raw data. Criteria for acceptability of data were based upon available site information, analytical method requirements, guidance documents, and professional judgment.

Flag Definitions:

E Exceeds calibration range
J Estimated value
J+ Estimated value, biased high
J- Estimated value, biased low
UJ Not detected and the detection limit is estimated
U Not present above the associated level; blank contamination exists
R Unusable data

Acronyms:

%D Percent difference
°C Degrees Celsius
BTEX Benzene, toluene, ethylbenzene, and xylenes
CLP Contract Laboratory Program
DF Dilution factor
DL Detection limit
DV Data validation
EPA Environmental Protection Agency
GC Gas chromatography
GRO Gasoline range organics
HPLC High pressure liquid chromatography
LCS Laboratory control sample
LCSD Laboratory control sample duplicate
MDL Method detection limit
MS Matrix spike
MSD Matrix spike duplicate
NFG National Functional Guidelines
QC Quality control
RL Reporting limit
RPD Relative percent difference
SW-846 *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA
TIC Tentatively identified compound
VOA Volatile organic analysis
VOC Volatile organic compounds

Data Validation Checklist
Organic and Inorganic Analyses

Project:	Colonial Pipeline Huntersville	Project No:	60674226
Work Order:	92605777	Methods:	SW-846 8260D VOC (BTEX)
Laboratory:	Pace Analytical Services - Charlotte	Associated Sample IDs:	Refer to **Attachment A** (Sample summary)
Matrix:	Surface Water	Sample Dates:	05/12/2022
Reviewer:	Julianne McCurdy, AECOM	Date:	06/10/2022
Concurrence[1]:	Zachary Neigh, AECOM	Date:	06/21/2022

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
1. Were holding times met?	✓			8260D: ≤14 days (preserved).	
2. Were sample storage and preservation requirements met?	✓			• The temperature of containers upon receipt at the laboratory met EPA storage requirements of ≤6°C. • Zero headspace was observed in VOA vials containing all water samples at time of analysis. • The laboratory verified that samples were properly preserved for all parameters.	
3. Were measurement results for all project-specified target analytes reported?	✓				
4. Were project-specified Reporting Limits Objectives achieved?	✓				
5. Do sample prep dates occur before analytical dates?			✓		
6. Was a method blank analyzed with each batch?	✓				
8. Were target analytes reported in the laboratory blanks above the DL?		✓			
9. Were target analytes reported in field blank analyses (e.g., trip, ~~ambient, field, or~~ equipment) above the DL?			✓		
10. Were analytes detected in samples at concentrations similar to that observed in blanks?			✓	Blank contamination does not exist.	
11. Was a field duplicate analyzed?			✓		
12. Was precision deemed acceptable as defined by DV Guidelines?			✓		
13. Was a LCS analyzed with each batch?	✓				
14. Were LCS' recoveries within lab/project[2] specifications?	✓			LCS only	
15. Were LCS/LCSD RPD within lab specifications?			✓		
16. Was a MS/MSD pair analyzed with each batch?	✓				
17. Is the MS/MSD parent sample a project-specific sample? *Only project-specific samples have been listed.*		✓			
18. Were MS/MSD recoveries within lab and project[2] specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*			✓		

[1] Lead verifier

[2] For best data management practice, recovery should fall within the more stringent of laboratory control limits OR 60 to 140% of the true value.

Data Validation Checklist (Continued)

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
19. Were MS/MSD RPD within lab specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*			✓		
20. Was a post digestion spike analyzed for inorganics? *Only project-specific samples have been listed.*			✓		
21. Was a project-specific sample selected by the laboratory for the post digestion spike analysis?			✓		
22. Were post-digestion spike recoveries within lab/project specifications? *Only QC results for project samples are evaluated.*			✓		
23. Was a serial dilution analysis for inorganics?			✓		
24. Is the serial dilution parent sample a project-specific sample? *Only project-specific samples have been listed.*			✓		
25. Is the percent difference between the serially diluted result and undiluted result less 10% (for those analytes with native concentrations greater than 50x the DL)? *Only QC results for project samples are evaluated.*			✓		
26. Was a laboratory duplicate analyzed?		✓			
27. Is the laboratory duplicate sample a project-specific sample? *Only project-specific samples have been listed.*			✓		
28. Do laboratory duplicate results meet lab specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*			✓		
29. For organics, were initial and continuing calibration standards analyzed at the lab/project-specified frequency for each instrument?	✓				
30. Were tuning and a calibration results within laboratory, method, and project specifications?	✓				
31. Were surrogate recoveries within lab specifications?	✓				
32. Were internal standard results within lab specifications?	✓				
33. Were sample results, which were determined by GC/HPLC, confirmed using a second column of dissimilar stationary phase or detector, and the %D between primary and secondary results less than 40 for all detected analytes?			✓		
34. Were TIC reported and were reported results qualified as estimated concentrations?			✓		
35. Is the moisture content in any soil/sediment sample greater than 70%? If yes, then results should be reported on a wet-weight basis.			✓		
36. Were lab comments included in report? If yes, summarize contents or attach a copy of the narrative.		✓			
37. Were results verified with a Stage 3 recalulation?	✓			Recalculation was performed on SEEP-1 CONFLUENCE 20220512. See **Attachment B** for details.	

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag

Comments:

All sample concentrations that are less than the RL but greater than the MDL are considered estimated (J-flagged).

The data review process was modeled after the *USEPA CLP NFG for Superfund Organic Methods Data Review* (EPA, November 2020). Sample results have been qualified based on the results of the data review process (**Attachment C)**. In performing the data evaluation, AECOM assumed that the data reported by the laboratory are complete, compliant, and an accurate representation of the raw data. Criteria for acceptability of data were based upon available site information, analytical method requirements, guidance documents, and professional judgment.

Flag Definitions:

E Exceeds calibration range
J Estimated value
J+ Estimated value, biased high
J- Estimated value, biased low
UJ Not detected and the detection limit is estimated
U Not present above the associated level; blank contamination exists
R Unusable data

Data Validation Checklist
Organic and Inorganic Analyses

Project:	Colonial Pipeline Huntersville	Project No:	60674226
Work Order:	92605777	Methods:	SW-846 8260D VOC (BTEX)
Laboratory:	Pace Analytical Services - Charlotte	Associated Sample IDs:	Refer to **Attachment A** (Sample summary)
Matrix:	Surface Water	Sample Dates:	05/12/2022
Reviewer:	Julianne McCurdy, AECOM	Date:	06/10/2022
Concurrence[1]:	Zachary Neigh, AECOM	Date:	06/21/2022

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
1. Were holding times met?	✓			8260D: ≤14 days (preserved).	
2. Were sample storage and preservation requirements met?	✓			• The temperature of containers upon receipt at the laboratory met EPA storage requirements of ≤6°C. • Zero headspace was observed in VOA vials containing all water samples at time of analysis. • The laboratory verified that samples were properly preserved for all parameters.	
3. Were measurement results for all project-specified target analytes reported?	✓				
4. Were project-specified Reporting Limits Objectives achieved?	✓				
5. Do sample prep dates occur before analytical dates?			✓		
6. Was a method blank analyzed with each batch?	✓				
8. Were target analytes reported in the laboratory blanks above the DL?		✓			
9. Were target analytes reported in field blank analyses (e.g., trip, ~~ambient, field, or~~ equipment) above the DL?			✓		
10. Were analytes detected in samples at concentrations similar to that observed in blanks?			✓	Blank contamination does not exist.	
11. Was a field duplicate analyzed?			✓		
12. Was precision deemed acceptable as defined by DV Guidelines?			✓		
13. Was a LCS analyzed with each batch?	✓				
14. Were LCS' recoveries within lab/project[2] specifications?	✓			LCS only	
15. Were LCS/LCSD RPD within lab specifications?			✓		
16. Was a MS/MSD pair analyzed with each batch?	✓				
17. Is the MS/MSD parent sample a project-specific sample? *Only project-specific samples have been listed.*		✓			
18. Were MS/MSD recoveries within lab and project[2] specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*			✓		

[1] Lead verifier

[2] For best data management practice, recovery should fall within the more stringent of laboratory control limits OR 60 to 140% of the true value.

Data Validation Checklist (Continued)

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
19. Were MS/MSD RPD within lab specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*			✓		
20. Was a post digestion spike analyzed for inorganics? *Only project-specific samples have been listed.*			✓		
21. Was a project-specific sample selected by the laboratory for the post digestion spike analysis?			✓		
22. Were post-digestion spike recoveries within lab/project specifications? *Only QC results for project samples are evaluated.*			✓		
23. Was a serial dilution analysis for inorganics?			✓		
24. Is the serial dilution parent sample a project-specific sample? *Only project-specific samples have been listed.*			✓		
25. Is the percent difference between the serially diluted result and undiluted result less 10% (for those analytes with native concentrations greater than 50x the DL)? *Only QC results for project samples are evaluated.*			✓		
26. Was a laboratory duplicate analyzed?		✓			
27. Is the laboratory duplicate sample a project-specific sample? *Only project-specific samples have been listed.*			✓		
28. Do laboratory duplicate results meet lab specifications? *Only QC results for project samples analyzed and reported under this laboratory report number are evaluated.*			✓		
29. For organics, were initial and continuing calibration standards analyzed at the lab/project-specified frequency for each instrument?	✓				
30. Were tuning and a calibration results within laboratory, method, and project specifications?	✓				
31. Were surrogate recoveries within lab specifications?	✓				
32. Were internal standard results within lab specifications?	✓				
33. Were sample results, which were determined by GC/HPLC, confirmed using a second column of dissimilar stationary phase or detector, and the %D between primary and secondary results less than 40 for all detected analytes?			✓		
34. Were TIC reported and were reported results qualified as estimated concentrations?			✓		
35. Is the moisture content in any soil/sediment sample greater than 70%? If yes, then results should be reported on a wet-weight basis.			✓		
36. Were lab comments included in report? If yes, summarize contents or attach a copy of the narrative.		✓			

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag

Comments:

All sample concentrations that are less than the RL but greater than the MDL are considered estimated (J-flagged).

The data review process was modeled after the *USEPA CLP NFG for Superfund Organic Methods Data Review* (EPA, November 2020). Sample results have been qualified based on the results of the data review process (**Attachment B)**. In performing the data evaluation, AECOM assumed that the data reported by the laboratory are complete, compliant, and an accurate representation of the raw data. Criteria for acceptability of data were based upon available site information, analytical method requirements, guidance documents, and professional judgment.

Flag Definitions:

E Exceeds calibration range
J Estimated value
J+ Estimated value, biased high
J- Estimated value, biased low
UJ Not detected and the detection limit is estimated
U Not present above the associated level; blank contamination exists
R Unusable data

Acronyms:

%D Percent difference
°C Degrees Celsius
BTEX Benzene, toluene, ethylbenzene, and xylenes
CLP Contract Laboratory Program
DF Dilution factor

High-Resolution Light Non-Aqueous Phase Liquid (LNAPL) Conceptual Site Model Assessment, 2020-L1-2448 Release February/March 2021

Summary

COLUMBIA Technologies, LLC (COLUMBIA), in collaboration with **Apex Companies, LLC (Apex)**, conducted a high-resolution site assessment (HRSA) of the Colonial Pipeline 2020-L1-2448 Release site located at 14511 Huntersville-Concord Road, Huntersville, NC (the Site) during the period of February 2 to March 25, 2021.

The primary objectives of this assessment were to characterize the extent and physical characteristics of the remaining LNAPL accumulations, to identify the soil structure in which any residual LNAPL resides for permeability, and to provide information to assess the LNAPL recoverability.

To accomplish these objectives, a High-Resolution Site Characterization (HRSC) was conducted and an updated LNAPL Conceptual Site Model (LCSM) was developed in accordance with the guidelines of the Interstate Technology and Regulatory Council (ITRC), *LNAPL-3: LNAPL Site Management: LCSM Evolution, Decision Process, and Remedial Technologies (2018)*.

The updated LCSM presented herein is based on high-resolution direct sensing measurements made by **COLUMBIA** and pertinent Site data provided by **Apex.**

An overview of the Site and the HRSC survey locations identified by **Apex** are presented in **Figure 5** (see end of this report). As discussed further below, these survey locations were adjusted during the course of the survey, in consultation with **Apex** based on daily review of the HRSC results as they were developed.

Direct sensing survey locations consist of 45 OiHpt stations in and around Areas of Potential Concern (AOPC) designated by **Apex**. OIP and HPT data were collected in each of the 45 OiHpt stations.

These direct-sensing stations were

initially located at the Site adjacent to existing monitoring and recovery wells with significant apparent in-well LNAPL thickness based on gauging data provided by **Apex**.

Subsequent locations were added to define the LNAPL footprint.

The OIP technology was used to delineate residual LNAPL, and adjacent lithologic logs were useful to “calibrate” OiHpt data.

The highest saturations were identified in the north, northeast and northwest and southwest of the release point as evidenced by very high OIP responses.

OIP data were generally consistent with prior conventional data and supplemented and confirmed the prior data. The highest OIP saturations corresponded generally well to areas with the greatest LNAPL thickness in monitoring wells.

The highest saturation of LNAPL was found in low lying ‘basins’ within the transition zone to the bedrock interface, particularly in areas with significant interbedding of courser grained (high permeability zones) and finer grained (low permeability zones) soils.

Significant mass of residual LNAPL was identified both above and below the air-water interface.

The interpreted data are useful to support future efforts at the site, including (for example) locating additional recovery wells, as may be warranted.

Figures 5 and **8** through **13** provide a visualization of the residual LNAPL in both plan and elevation views**.**

Conclusions and selected figures in this report are based on and generated from an interactive 3D model.

Preliminary Conceptual Site Model

(Information provided by Apex)

Site and Release History

*"*The Site is a recent gasoline release site discovered on the 14 August 2020 and is located approximately 350 feet northeast of where the Colonial Pipeline Company (CPC) pipeline 1 crosses the Huntersville-Concord Road (SR-2448) between Lawther Road and Asbury Chapel Road. The release is now commonly referred to as the 2020-L1-SR2448 Release. The release point is identified on the site location map provided as **Figure 3**.

Site Lithology

Based on a review of the 1985 Geologic Map of North Carolina (NCDNR), the site is underlain by a thick overburden characterized by sequence of silty clay, silty sand and clay soils which are derived from weathered granites or diorites or metamorphosed quartz diorite. This saprolite overburden varies in thickness across the site from 20 feet near the release point to over 100 feet. Fine to medium silty sand is observed at the transitional bedrock interface. Drilling and geophysics data indicate that bedrock is at its highest elevation in the immediate area of the release extending to the south across Huntersville-Concord Road. Bedrock depths roughly descend in all directions from the immediate release area.

Site Hydrogeology

Depth to groundwater at the site ranges from less than 10 feet below ground surface at the north limit of the study area, where the ground surface lies at lower elevations, to over 50 feet below ground surface in the vicinity of MW-41 and MW-55, where the competent bedrock is encountered at greater depths. The water table occurs primarily in the saprolite unit; however, bedrock rises locally above the water table in some areas of the Site. The potentiometric map indicates that groundwater elevations are highest proximal to the release area flowing north and south in a radial pattern. Surficial groundwater at the site is estimated to flow in a general northerly and southerly direction. The gradient magnitude and groundwater flow velocities are discussed in **Apex** reports

Mobile LNAPL

Mobile LNAPL i.e., LNAPL at greater than residual saturation has been recorded in several monitoring and recovery wells at steady state (non-pumping) conditions across the site as shown on the LNAPL distribution map. Cognizance is made of the fact that considering the site is a relatively new release site, this data are highly transient.

Potential Receptor

The potential receptors identified by Apex include Water Supply Wells, Public

Water Supplies, and Surface Water.

Initial Response and Remedial Activities

Initial response activities undertaken in August 2020 included excavation of contaminated soil and surface recovery of LNAPL in the vicinity of the release point.

The current remedial effort includes intermittent active recovery air sparge and soil vapor extraction, vacuum enhanced recovery, and hydraulic control.

Significant volume in excess of 1 million gallons of LNAPL has been recovered from the site since the inception of this effort.

Apex's Preliminary Conceptual Site Model is discussed in Comprehensive Site Assessment Report SR 2448/Pipeline Right of Way, Jan 2021.

Methods, Assumptions, and Procedures

This HRSC was conducted in accordance with the guidelines of the Interstate Technology and Regulatory Council (ITRC), *LNAPL-3: LNAPL Site Management: LCSM Evolution, Decision Process, and Remedial Technologies (2018)*.

Planning and development of this HRSC involved a review of available Site documentation provided by **Apex** including but not limited to:

- Monitoring and Recovery well gauging data
- Groundwater potentiometric surface Maps
- LNAPL distribution maps
- Delineation of soil sampling data
- Borehole drilling logs
- Depth to bedrock data
- Surface geophysics profiles
- Borehole geophysics logs

These preliminary data were reviewed to develop an understanding of the existing Conceptual Site model (CSM) and indications of residual LNAPL impacts. Some of these data have been pertinently integrated and used in the further development of the LNAPL conceptual site model as shown in the 2D and 3D visualizations appended at the end of the report.

Direct sensing survey stations are shown in **Figure 4**. Direct sensing survey locations consist of 45 OiHpt stations in and around Areas of Potential Concern (AOPC) designated by **Apex**. OIP and HPT data were collected in each of the 45 OiHpt stations.

These direct-sensing stations were initially located at the Site adjacent to existing monitoring and recovery wells with significant apparent in-well LNAPL thickness based on gauging data provided by **Apex**.

Subsequent locations were added where needed to further define the LNAPL footprint.

Ultraviolet Optical Image Profiler (OIP)

Utilizing OIP, the vertical distribution and relative concentrations of LNAPL in the subsurface can be discerned at the centimeter scale. Initial OIP stations were advanced in proximity to selected monitoring and recovery wells with significant apparent in-well LNAPL thickness. These first lines of evidence enabled the team to characterize the presence and depth interval of LNAPL at the impacted locations. The observed response of the OIP system at these locations then served as a reference for delineation of LNAPL present at the Site.

The remaining OIP stations were planned and advanced at selected locations stepping out from the responses discovered during the initial borings to establish lateral boundaries to

the LNAPL mass and confirm LNAPL plume stability.

Hydraulic Profiling Tool (HPT) and Electrical Conductivity Dipole

COLUMBIA used an OiHpt probe which features a Hydraulic Profiling Tool (HPT) and an Electrical Conductivity (EC) system to evaluate subsurface hydrostratigraphy at the Site.

The HPT identifies soil intervals exhibiting higher hydraulic permeability or heterogeneities that infer preferential pathways for the movement of LNAPL or dissolved-phase contaminants, and lower permeability layers that often serve as storage zones for residual hydrocarbons. HPT pressure logs record changes in hydraulic pressure measured directly as water is pumped into the formation at a constant rate. These logs reveal the variability and relative hydraulic conductivity of the soil.

The Electrical Conductivity dipole array is mounted at the tip of the probe that measures the electrical conductivity (EC) of soil and groundwater. EC measurements identify changes in the soil's electrical conductivity that can be related to changes in stratigraphy, providing insight into contaminant pathways when viewed in relation to chemical detector response. Low EC values generally indicate coarse-grained materials (sand and gravel), while higher EC values usually indicate elevated clay content, although water chemistry and other Site-specific factors may influence EC response as well.

General conductivity ranges for basic soil types are presented in **Figure 1,** below (Geoprobe, 2015).

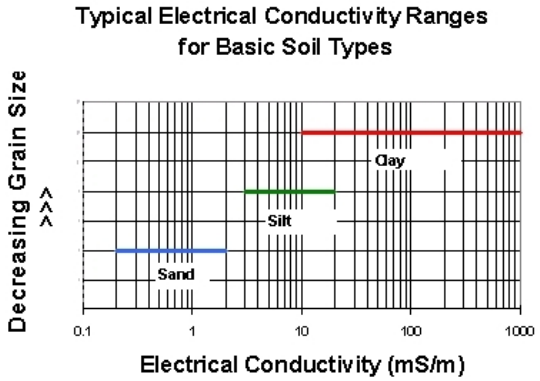

Figure 1

Modelling and Visualization

COLUMBIA's SmartData Solutions® together with C-Tech EVS-Pro® was used to carryout real-time data collection, analysis, visualization, mapping and modelling of the LCSM.

OiHpt data along with all the data provided by **Apex** has been integrated to generate descriptive static and interactive 2D cross-sections and 3D models of the LCSM. The cross-sections and models depict the LNAPL plume distribution as it relates to the hydrogeologic architecture of the site and other key features such as the release point, monitoring and recovery wells which have been installed at the site as part of the site overall investigation and remedial activities.

Assumptions and Limitations

The following limitations and assumptions are noted:

- The OIP sensor is located 18 inches from the bottom of the probe tip, which means that at probing refusal thin zones below the sensor may be unmapped. Further, due to variability in lithology across the Site, it was not always possible to advance the OIP probe to the bedrock interface. The implication is that there are areas where LNAPL may not have been fully delineated especially in the transition zone of the overburden to bedrock interface.
- The existence of LNAPL below the probing depth was inferred and can later be verified through other drilling and sampling techniques.

.

Results and Discussion

Figures 5 to **10** at the end of the report provide a visualization of the direct sensing data depicting the residual LNAPL bodies.

LNAPL Distribution

The HRSC OIP data indicate a fairly wide lateral and vertical distribution of residual phase gasoline LNAPL in an almost radial fashion from the release point as shown in **Figure 5**. The highest OIP responses (>50%) were mainly found northeast, northwest and southwest of the release point, while slightly lower but still significant responses were recorded in the south and southeast. This distribution pattern can be explained by the fact that the initial release occurred at relatively shallow depth close to the surface at high pressure causing LNAPL to be dispersed in a random radial fashion.

The LNAPL distribution plume mapped using OIP response data were calibrated using in-well LNAPL thickness data collected by **Apex** during the various well gauging events. This is illustrated in **Figure 6,** which shows a close mirroring of the OIP response contours and LNAPL thickness contours.

The outer edges of the LNAPL plume were bounded by diminishing OIP response, or by well gauging data collected by **Apex**, except in areas where access was limited such as the private property located off Asbury Chapel Road, south of Huntersville-Concord Road. However, very low to no OIP response was recorded at OIP-10, OIP-22 and OIP-23 located just north of this property as such giving confidence that the LNAPL plume was bounded fairly well at those points.

While access issues were encountered North of Huntersville-Concord Road, within the Oehler Nature Reserve due to a limit to the number of trees that could be cut down, the LNAPL plume was bounded fairly well as evidenced by very low to no OIP response recorded at OIP-29 and OIP-30 in the northeast; OIP-25 and OIP-26 in the north; OIP-4 and OIP-27 in the northwest; and OIP-39, OIP-06, OIP-31, and OIP-32 in the west to south west.

In the east, OIP-15 recorded a relatively high response and there is no bounding point beyond this point due to access issues. This point is located close to a hydraulic control well and this may explain the results, however uncertainty remains high in terms of the extent and bounding of the LNAPL plume beyond this point. **COLUMBIA** understands that this has been addressed by Apex with subsequent delineation efforts.

Once the pressurized release ceased, LNAPL continued to distribute across the site influenced by gravitational force (LNAPL driving head), site topography and hydrostratigraphy. This is evidenced by the observed pattern of LNAPL

distribution and is line with the state of the science described by LNAPL-3, ITRC, 2018.

The LNAPL distribution pattern across the site is described in relation to these factors and is illustrated along cross-sections A-A', B-B', and C-C' (**Figure 7)** and integrated data visualization in **Figures 8** to **13.** All the individual OiHpt logs used in these cross-sections are shown in **Appendix D.**

LNAPL Head and Topography

Surveyed depth to bedrock data provided by **Apex** was used to model the transition zone geometry at the bedrock interface and is indicated by the orange line in the cross-sections (**Figures 8** to **13**). An analysis of the three cross-sections reveals that from the initial release point, LNAPL is likely to have flowed under gravity and pooled in the lower areas near the bedrock interface which acted as 'basins' trapping significant mass of LNAPL. The release occurred in the vicinity of OIP-05 and RW-17 which are located in the area with the shallowest depth to bedrock approximately 20.5 feet below grade. From this point LNAPL flowed under gravity following the dip in topography, settling in the low 'basins' near the bedrock interface around OIP-08 southwest of the release point, and OIP-20 in the northeast as shown in **Figures 8** and **9**. The trend is demonstrated in the South – North cross-section (**Figures 10** and **11**) which shows that from the release point near OIP-05, LNAPL flowed under gravity mainly to the north with a significant body pooling in the lower basin near OIP-02, RW-31, RW-57, RW61. Similarly, the southeast – northwest cross-sections (**Figures 12** and **13**) demonstrate that LNAPL flowed from the highest point following the dip in bedrock topography settling in lower basins mainly in the northwest near OIP-03 and RW-30 where the gradient from the release is more pronounced, but also migrated and settled near the bedrock interface in the lower areas in the southeast near OIP-07 and OIP-16.

Hydrostratigraphic Heterogeneity

Another controlling factor that played a significant role in the distribution of residual LNAPL across the Site is hydrostratigraphic heterogeneity.

The HPT data were used to model the hydrostratigraphy of the Site and were correlated with OIP data to provide an explanation of the distribution pattern observed at the Site. High HPT pressure and low system flow are indicative of low permeability soils. Higher permeability is manifested by low hydraulic pressure and normal system flow.

For this Site, HPT data identified highly complex soils indicative of interbedded high and low permeability as shown in the log for OIP-20 (**Figure 14**). The lower permeability strata play an important role in retaining or inhibiting the movement of any residual LNAPL and water.

Figures 8 to **13** demonstrate that higher OIP responses (areas of high LNAPL saturation) correspond to areas with significant interbedding of low and high

HPT pressures. This shows that following cessation of the initial release where LNAPL was migrating under a significant driving head and gravity following bedrock topography, LNAPL was trapped in the high permeability zones represented by low HPT pressure (sands), which are bounded by lower permeability zones (silt and clay) which are represented by high HPT pressure zones in the cross-sections.

Water Table and LNAPL Stability

Another significant observation is the distribution of LNAPL in relation to the water table. Reference (N) provides a comprehensive update of the current science and understanding of LNAPL distribution in the subsurface and how it changes over time.

Corrected depth to water data from gauging events undertaken during the wet and dry season were provided by **Apex**. These data were used to generate the High and Low water table represented by turquoise and blue lines in **Figures 8** to **13.** The residual LNAPL was identified both above and below the air-water interface and exhibited the characteristics of all three zones shown in **Figure 2,** below.

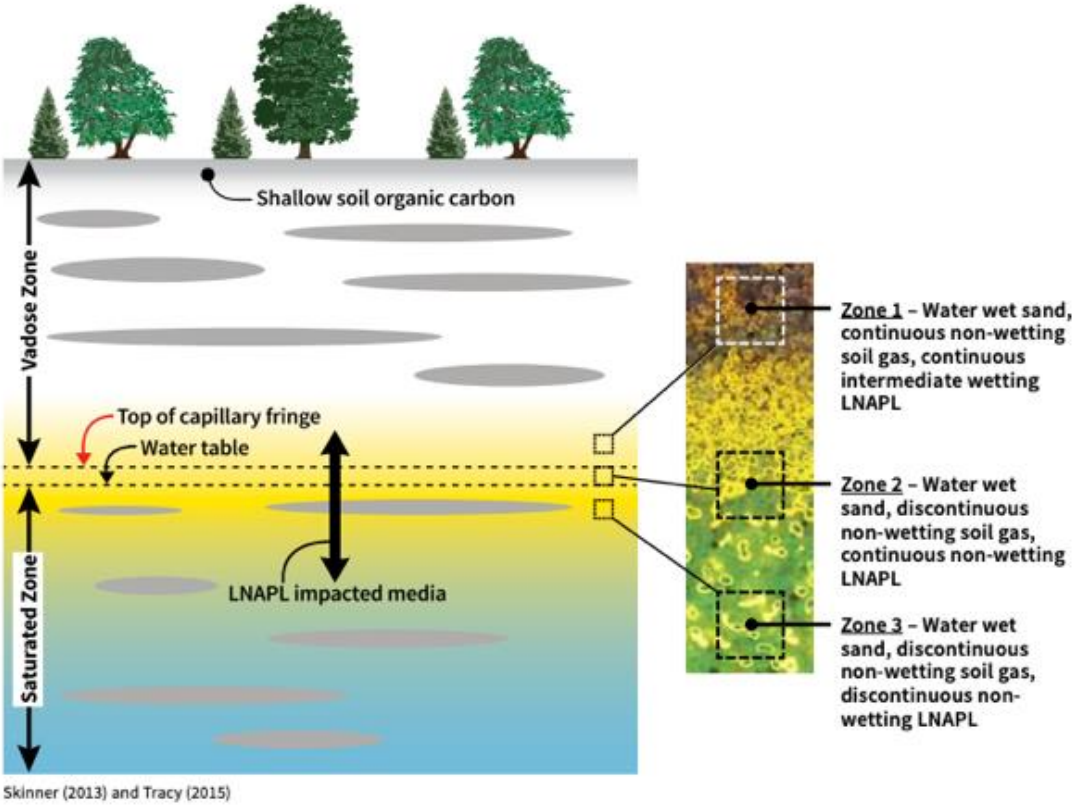

Figure 2 – LNAPL Distribution in the Subsurface[1]

[1] API Soil & Groundwater Research Bulletin No. 9., Brost et al., June 2000. *Non-Aqueous Phase Liquid (NAPL) Mobility Limits in Soil*.

This observation is important and dispels the common misconception that "*LNAPL floats on the water table or capillary fringe like a pancake and does not penetrate below the water table*". According to ITRC LNAPL-3, LNAPL does not float on the water table in a uniform, high-saturation, "pancake"-like layer. The LNAPL is distributed above, at, and below the water table at saturations that vary vertically depending on past conditions such as LNAPL driving head and water table fluctuations.

Quality Control and Data Anomalies

Each direct sensing instrument was operated in accordance with the manufacturer's standard operating procedures and the *Standard Practice for Direct Push Technology for Volatile Contaminant Logging with the Membrane Interface Probe (MIP)* ASTM STANDARD D7352 – 07.

Performance testing was conducted on each system prior to and following each survey sounding. These procedures are outlined in **Appendix B.**

A QC review of the OiHpt logs for this project did not reveal any anomalies in the operation or either system that would have resulted in a lack of detection of petroleum LNAPL.

The direct-sensing logs generated for this assessment are presented in **Appendix C** and **D**.

Conclusions

1. This high-resolution assessment at the Colonial Pipeline 2020-L1-2448 Release Site identified widely distributed residual LNAPL based on a number of OIP logs.
2. OIP data were generally consistent with prior conventional data and supplemented and confirmed the prior data.
3. The highest OIP saturations corresponded generally well to areas with the greatest LNAPL thickness in monitoring wells.
4. The highest saturation of LNAPL was found in low lying ‘basins’ within the transition zone to the bedrock interface, particularly in areas with significant interbedding of courser grained (high permeability zones) and finer grained (low permeability zones). The low permeability zones acted as traps of the LNAPL mass once the initial driving head had ceased.
5. Significant mass of residual LNAPL was identified both above and below the air-water interface.
6. The interpreted data are useful to support future efforts at the site, including (for example) locating additional recovery wells, as may be warranted.

List of Symbols, Abbreviations, and Acronyms

Symbol or Abbreviation	Definition
CSM	**Conceptual Site Model.** A **CSM** is a method to describe what is known or can be inferred about a site for the purpose of making a decision. A CSM generally will address physical, chemical and biological systems; contaminant release and transport; societal issues; policy, land use, and exposures.
DPT	**Direct**-**Push Technology** (DPT) refers to a group of techniques used for subsurface investigation by driving, pushing and/or vibrating small-diameter rods into the ground.
HPT	**Hydraulic Profiling Tool**. The **HPT** is a logging **tool** that measures the pressure required to inject a flow of water into the soil as the probe is advanced into the subsurface. In addition to measurement of injection pressure, the HPT can also be used to measure hydrostatic pressure under the zero-flow condition.
LCSM	**LNAPL Conceptual Site Model.** A **LCSM** is a conceptual site model focused on the release and transport of LNAPL contaminants.
LIF	**Laser-induced fluorescence** is a spectroscopic method in which an atom or molecule is excited to a higher energy level by the absorption of laser light followed by spontaneous emission of light.
LNAPL	**Light Non-Aqueous Phase Liquids** are groundwater contaminants that are not soluble in water and have lower density than water, in contrast to a **DNAPL** which has higher density than water.
Migrating LNAPL	**Migrating LNAPL.** Migrating LNAPL refers to plume-scale behavior; the overall body or a portion of the LNAPL body is expanding. The mechanisms that drive LNAPL migration are sufficient to overcome resistive forces.
Mobile LNAPL	**Mobile LNAPL.** Mobile LNAPL represents a pore-scale concept. LNAPL occupies a sufficient fraction of the total porosity to form an interconnected network but does not contain the driving forces on the LNAPL body to exceed the resistive forces.
OIP	**Optical Image Profiler.** An OIP is a tool that uses LED light in the ultraviolet spectrum to excite fluorescent molecules that exist in the vast majority of hazardous non-aqueous phase liquids (NAPLs) such as petroleum fuels/oils, coal tars, and creosotes.
PHC	**Petroleum Hydrocarbons.** The presence of petroleum hydrocarbon fuels in any phase. **(PHC).**

Residual LNAPL	**Residual LNAPL.** Residual LNAPL represents a pore-scale concept whereby LNAPL occupies a fraction of pore space that is discontinuous and too small for LNAPL flow to occur.
VOC	**Volatile organic compounds** (**VOCs**) are organic chemicals that have a high vapor pressure at ordinary room temperature. Their high vapor pressure results from a low boiling point, which causes large numbers of molecules to evaporate or sublimate from the liquid or solid form of the compound and enter the surrounding air, a trait known as volatility.

Conversion Factors

Inch/Ounce/Pound/PSI to International System of Units

Multiply	By	To obtain
	Length	
Inch (in.)	2.54	Centimeter (cm)
Inch (in.)	25.4	Millimeter (mm)
Foot (ft.)	0.3048	Meter (m)
	Volume	
Ounce (oz.)	29.6	Milliliters (ml)
Gallon (gal)	3.8	Liters (L)
	Pressure	
Pounds per Square Inch (psi)	6.89	Kilopascals (kPa)
	Hydraulic Conductivity	
Feet per day (ft/day)	0.0003527	Centimeters per second (cm/sec)

Temperature in degrees Celsius (^oC) is converted to degrees Fahrenheit (^oF) as

$$(^oF) = (1.8 \times (^oC)) + 32$$

Datum

Horizontal and vertical coordinates are referenced from the World Geodetic System 1984 [EPSG:4326].

Supplemental Information

Electrical conductivity (EC) is provided in millisiemens per meter (mS/meter).

Concentrations of chemical constituents in water are provided in either milligrams per liter (mg/L) or micrograms per liter (μg/L).

Concentrations of chemical constituents in soil are provided in either milligrams per kilogram (mg/kg) or micrograms per kilogram (μg/kg).

Concentrations of chemical constituents in vapor are provided in either milligrams per cubic meter (mg/m^3) or micrograms per cubic meter ($\mu g/m^3$).

APPENDICES

APPENDIX A - Direct Sensing Equipment Description

Optical Image Profiler (OIP)

The OIP system employs an excitation beam of light from an LED at 275 nanometers (nm). Any residual phase PAHs present in the soil matrix will absorb and then release this photon energy in the form of fluorescence.

This fluorescence is captured via a UV camera in the probe. Individual OIP logs consist of a primary graph of fluorescence as a % of the optical image recorded by the UV camera. Visible light images can also be captured if desired. The camera records the UV images at a rate of 30 frames per second.

OIP screening is performed by pushing or hammering the OIP probe into the soil at the target rate of two centimeters per second (0.8 inches per second). As the OIP is advanced, the fluorescence in each frame is captured and analyzed and displayed in real-time as a function of depth.

OIP system data is presented as a percentage of the optical window showing fluorescence. OIP system performance is checked using know compounds such as diesel, motor oil, and gasoline. Site specific products may be used as an additional performance check

Any fluorescence response is normally indicative of residual phase petroleum hydrocarbons, though some naturally occurring materials such as limestone will also fluoresce to a lesser and more monochromatic degree.

Electrical Conductivity (EC)

Soil electrical conductivity, the inverse of soil resistivity, is measured using a dipole arrangement. In this process, an alternating electrical current is transmitted through the soil from the center, isolated pin of the probe. This current is then passed back to the probe body. The voltage response of the imposed current to the soil is measured across these same two points. Conductivity is measured in Siemens/meter, and due to the low conductivity of earth materials, the EC probe uses millisiemens/meter (mS/m). The probe is reasonably accurate in the range of 5 to 400 mS/m.

The electrical properties of soil vary by geological setting. Therefore, conductivity measurements will vary both in magnitude and the relative change from one soil type to another in each geological setting. In general, at a given location, lower conductivity values are characteristic of larger particles such as cobbles and sands, while higher conductivities are characteristic of finer sized particles such as finer sand, silts, and clays. Observed conductivities significantly higher than 400 mS/m are indicative of ionic materials other than soil. Examples include saltwater intrusion, the presence of ionic chemicals from storage or injection, or potentially soil mixtures with metallic compounds.

Hydraulic Profiling Tool (HPT)

The HPT portion of the system is used to create high-resolution, real-time profiles of soil hydraulic properties, which can be used to infer permeability and hydraulic conductivity. The HPT system consists of a controller, a pump, a transfer line (trunkline) which is pre-strung through the DPT rods, a pressure transducer, a permeable screen, and a field computer.

HPT screening is performed simultaneously with the EC logging. As the tool is advanced, water is pumped through the trunkline and passes into the soil through the permeable screen. The flow is regulated as to be as constant as possible. The pressure required to inject the constant flow of water into the soil, known as the HPT pressure, is monitored by the pressure transducer and recorded on the field computer in pounds per square inch (psi) versus depth. The flow rate of the water into the soil formation is also measured and recorded in milliliters per minute (mL/min) versus depth.

Static pressure measurements (dissipation tests) can also be made by stopping at discrete intervals, allowing users to determine the static water level. The dissipation test provides an estimate of the static water level, based on the hydraulic head imposed on the probe at rest as compared to the pressure measured at the surface prior to starting each location push. Dissipation tests are best to run in coarse-grained materials (sands and gravels) to assure that the local ambient hydrostatic pressure is measured quickly and accurately.

To perform a dissipation test, the HPT probe is advanced to a depth below the water table and the water flow is stopped. The pressure dissipation (reduction of pressure gradient caused by forcibly pumping water into the formation) is monitored until a stable value is observed. The dissipation usually takes the shape of a curve approaching an inflection point or stable value. The stable value is then used for the hydraulic pressure at that depth and can be used to estimate static water depth. The HPT software can also provide an estimate of K (a value used in hydrogeologic calculations) to provide an interpretation of the hydraulic permeability of the formation.

Depth Measurement

Depth in feet is measured and recorded using a precision potentiometer with a 100-inch linear range. The potentiometer is mounted on the mast of the DPT rig and a counterweight anchored to the foot of the rig. Measurements are recorded on the down stroke of the mast, as the tooling string is pushed into the ground, and is accurate within 1/10th of an inch. The reference elevation (depth) reported for each individual boring is established by setting the data logger to zero feet with the sensing window of the downhole probe aligned with the ground surface.

True boring elevations can be established with the addition of survey data if provided for in the scope of work.

APPENDIX B – Quality Control Procedures

System Quality Control Checks

Direct sensing technologies such as MIP, UVOST®, and OIP provide qualitative or semi-quantitative direct contact measurements of conditions in the soil, water, and vapor matrix of the subsurface. Correct performance response of the instruments is determined using standards or mixtures of known values or concentrations. Before and after each measurement run, the instruments are tested with these known standards to ensure their response is within an acceptable range.

The nature of direct-sensing technology is different than a typical laboratory analysis. In the lab, a known volume of a known concentration is introduced to the system, the compounds are separated chromatographically, and the response for each individual compound is recorded. This process is highly reproducible, and precise standards exist for laboratory control limits.

These performance tests of direct sensing instruments are not calibrations, per se. While the instrument response can be expected to be linear for a single chemical compound or in the known matrix conditions of the performance test standards, matrix conditions and chemical mixtures will be highly variable throughout the measurement run in subsurface.

In MIP, for instance, subsurface compounds diffuse across the MIP membrane, enter the carrier gas stream, and are transported directly to the GC. There is no chromatographic separation, just total response with depth.

Several other factors affect direct-sensing responses.

For OIP and UVOST®, these factors include:

- Soil grain size
- Interferences from fluorescent minerals such as limestones
- Contaminant types
- Degree of saturation
- System performance

For MIP, these factors include:

- The diffusion rate across the MIP membrane. This differs for every compound, based on:
    - Vapor pressure
    - Solubility
    - Interactions with other compounds
    - Membrane age and wear
- Ambient temperature
- Temperature of the subsurface
- Soil conditions (Clays provide a higher response than sands, due to increased back-pressure at the membrane)
- Detector response for each compound
- System performance

Copyright © 2020 by COLUMBIA Technologies LLC

For these reasons, a "calibration" is not possible. The variables within compounds of interest, mixtures of compounds, and subsurface conditions cannot be standardized. However, system performance can. Therefore, COLUMBIA Technologies implements protocols to test and evaluate system performance to produce the highest quality data in the industry. The results of these performance tests are maintained with each project file and available upon request.

UVOST® System Performance Tests

As a quality control check, the UVOST® system response is evaluated prior to and upon completion of each UVOST® screening location. This evaluation is completed using a Reference Emitter (RE) that consists of a blend of NAPL and produces a consistent fluorescence response over the four wavelengths monitored by the UVOST® system. Collected data is then presented as a percentage of the RE. Using the same RE at each location and site allows normalization of data collected over several locations, sites, or screening events. The RE standard is provided by the manufacturer, Dakota Technologies, and is the same for all UVOST® systems currently in operation.

In addition to obtaining a baseline RE for each location, the background reading of the UVOST® system is electronically recorded prior to insertion into the soil. This background reading is required to be less than 0.5% of RE prior to the start of any testing. The background during tool advancement typically stays at or below the surface background reading – giving confidence that any increases in fluorescence are "true" readings and not fluctuations or variations in background.

OIP System Performance Tests

OIP system performance is checked using known compounds such as diesel, synthetic motor oil, and gasoline. A visible target is used to verify the camera is functioning properly and check image focus. A black box test is then run to verify the OIP window is clear of contaminants that may result in false positives. The known compounds are then tested to verify the functionality of the UV light source and camera detection. Site specific products may be used as an additional performance check.

MIP System Performance Tests

System response is checked via Performance Tests with known compounds at known concentrations to verify that the system is responding to an acceptable level. On the recommendation of the manufacturer, Geoprobe Systems, this minimum acceptable response level is established as five times the standard deviation of the baseline noise level for each detector.

These tests vary, mostly due to ambient

Copyright © 2020 by COLUMBIA Technologies LLC

temperature and the age of the membrane. So, rather than looking for a specific response factor, the system is monitored for an acceptable response. When the response is not acceptable, the system is investigated, and corrective actions are implemented as necessary.

COLUMBIA Technologies performs several levels of MIP system evaluation for each project:

- Pre-Mobilization 5-Point Response Check
- Site Arrival 5-Point Response Check
- Pre-log Midpoint Response Check
- Post-Log Midpoint Response Check

For 5-point response tests, the system is evaluated at 0.10, 0.50, 1.0, 5.0, and 10.0 ppm to check response across three orders of magnitude of concentrations. For sites with expected petroleum contamination the system is checked using Toluene. For sites where chlorinated VOCs are expected, the system is checked using Trichloroethene (TCE). Site -specific compounds may be used where appropriate.

As an ongoing quality control check, the MIP system response is evaluated using a 1.0 ppm performance test solution prior to and upon completion of each MIP location. The resulting response values are recorded and compared to the results of the 5-point performance tests. When the response tests fall below 25% of the baseline value, corrective action must be taken.

Low-Level MIP System performance Test

The Low-Level system is evaluated using a similar 5-point response test. The test concentrations are 10, 50, 100, 500, and 1,000 ppb, using Toluene or TCE as appropriate. Ongoing Response tests are performed using a 100-ppb solution.

HPT System Performance Test

The EC dipole is evaluated using a brass and stainless-steel test jig, resulting in known values of 55 and 290 millisiemens (mS). Results must fall within 10% of the expected values; otherwise corrective action must be performed.

The HPT pressure and flow sensors are also evaluated using static (no flow) and dynamic (flow at approximately 150 milliliters per minute) hydraulic pressure measurements at two different head elevations, six inches apart. The difference for each test must be 0.2 psi, +/- 10%; otherwise corrective action must be performed.

APPENDIX H

PUMP TEST SUMMARY

October 25, 2021

Mr. Jeff Morrison
Colonial Pipeline Company

Subject: **Pump Test Report**
Colonial Pipeline, SR 2448, Huntersville, Mecklenburg County, North Carolina
2020-L1-2448 Release
Bedrock Monitoring Wells MW-90D and MW-91D
Apex Project No. CPC21018

Dear Jeff,

Apex Companies, LLC (Apex) prepared this report to document pump tests conducted in monitoring wells MW-90D and MW-91D, completed on June 28-29, 2021. These tests were performed at the Colonial Pipeline Company (CPC) Huntersville-Concord Road (State Road 2448 [SR 2448]) pipeline release site located near Huntersville, Mecklenburg County, North Carolina (the Site) to evaluate inter-well fracture flow and the relationship between fracture flow and flow in the saturated overburden. A secondary objective was to, if possible, evaluate aquifer parameters related to the groundwater and light non-aqueous phase liquid (LNAPL). The ultimate objective was to guide the placement of additional bedrock monitoring wells and extraction wells.

1.0 WELL DRILLING AND EVALUATION

The wells were drilled using air rotary methods from May 17-20, 2021 and from May 18-21, 2021, respectively, and consist of a grouted 4-inch PVC surface isolation casing keyed into competent bedrock with an open bedrock borehole. Boring logs are provided as **Appendix A**. The wells were drilled proximal to the release area (**Figure 1**) to aid in horizontal and vertical delineation of free- and dissolved-phase contaminants at the site. Prior to drilling these monitoring wells, no free-phase product, or LNAPL, was detected in any existing supply wells or monitoring wells constructed in the bedrock strata below the transitional zone between saprolite and bedrock. These test wells, however, were drilled in locations where the saprolite overburden is known to be impacted in both the saturated interval (below the water table) and unsaturated interval (above the water table). On May 26, 2021 approximately 10 feet and 15 feet of LNAPL were measured in MW-90D and -91D, respectively.

Geophysical logging of both boreholes was completed on June 22, 2021 including an acoustic televiewer, which was used to interpret fracture locations, aperture thickness, and dip. A *Summary and Discussion of Geophysical Logging* is provided as **Appendix B**. **Table M-1** summarizes the findings from drilling MW-90D and -91D.

Table M-1 Summary of Monitoring Well MW-90D and -91D Borings

Well ID	Ground Surface Elevation	Bedrock Elevation	Bottom of Surface Isolation Casing Elevation	Primary Fracture Elevations (Dip Angle)	Secondary Fracture Elevations (Dip Angle)	Apparent Impacted Fracture Elevations (Dip Angle)	Bottom of Borehole Elevation
MW-90D	729.23	708	694.8	679.1 (3), 657.3 (7), 655.1 (3)	681.7 (33), 677.6 (62), 675.6 (65), 671.0 (59)	657.3 (7), 655.1 (3)	646
MW-91D	734.90	705	694.2	684.3 (6), 657.3 (2)	689.1 (54), 688.9 (63), 672.4 (56), 665.4 (67), 662.4 (26), 661.7 (68), 657.8 (71), 656.8 (72), 654.6 (76), 652.5 (45)	657.3 (2)	644

Note: All elevations referenced to feet above mean sea level (msl)

A preliminary evaluation of data collected prior to the pump test, including boring logs and the interpretive geophysical logs, indicated that the location of LNAPL was a major sub-horizontal fracture located roughly between 655 and 658 feet above msl [or 74 and 77 feet below ground surface (bgs)] in the area of the release. The interpreted fracture aperture was 11 and 2 inches at MW-90D and MW-91D, respectively.

The pump tests performed on June 28 and 29, 2021 utilizing packers to isolate the lower water-bearing zones was completed to identify the source of LNAPL and to describe the relationship of fracture flow with the saturated overburden hydrostratigraphic unit.

2.0 PUMP TEST FIELD ACTIVITIES

The following monitoring and recovery wells were selected for observation during the pump tests: MW-90D, MW-91D, MW-24, MW-25, MW-41, MW-71, RW-07, RW-10, RW-12, RW-13, RW-14, RW-15, RW-16, RW-17, RW-18, RW-20, RW-21, RW-25, RW-34, RW-38, RW-43, RW-45, and RW-47.

Prior to installation of packers and initiation of pump tests at MW-90D and MW-91D, pneumatic total fluid recovery pumps were shut off and removed, where necessary, from the aforementioned wells selected for observation. The time available for stabilization at the observation wells was limited to a period of 2 to 4 hours, but assumed sufficient to identify direct connectivity to the test wells during pumping.

An electric submersible pump was used for the pump tests. The pump was connected to a battery located approximately 100 feet from the well and the pump was discharged to a plastic tote located approximately 100 feet upwind from the well locations. Pump tests were terminated as necessary to maintain submergence of the pump housing in water. Apex monitored combustible vapors during pumping in the work area around the well, the discharge location, and the battery location. Liquid levels were measured in the aforementioned observation wells and the test well using oil/water interface probes accurate to 0.01-foot. The flow rate was measured by a timed 1-gallon graduated vessel.

A total of three tests were performed:

- MW-90D, bottom of single packer at 69 feet bgs (elev. 660 feet), pump at 80 feet bgs (elev. 649 feet)

- MW-90D, straddle packers from 30 to 67 feet bgs (elev. 662 to 699 feet), pump at 66 feet bgs (elev. 663 feet)
- MW-91D, bottom of single packer at 69 feet bgs (elev. 666 feet), pump at 89.5 feet bgs (elev. 645.5 feet)

2.1 MW-90D, single packer at 660 feet, bottom of well at 646 feet

This test evaluated primary water-bearing zones from 655 to 657 feet. The well was pumped for 85 minutes in this configuration; initially at 1 gallon per minute (gpm), increased to 1.8 gpm after 62 minutes. The total water level was drawn down 13.60 feet in this zone. The LNAPL thickness decreased from approximately 12 to 0 feet after 72 minutes of pumping. Liquid levels above the packer reduced approximately 10 feet during the test, which may be attributed to minor leakage across the packer or lack of upflow from the primary water-bearing zone. A response was induced at MW-91D; 4.53 feet LNAPL drawdown and 4.82 feet water level drawdown. No other responses were identified at observation wells, including RW-13, the nearest overburden well to MW-90D. After 15 hours of recovery while maintaining pressure on the packer, water levels recovered to nearly the static water level and 0.03 feet LNAPL was measured.

2.2 MW-90D, straddle packer 662 to 699 feet

This test primarily evaluated a primary water-bearing zone at 679 feet. The well was pumped for 26 minutes in this configuration; initially at 1.2 gpm, decreased to 0.6 gpm after 8 minutes. The total water level was drawn down 9.50 feet in this zone. The LNAPL thickness decreased from approximately 11 to 10 feet after 19 minutes of pumping. No apparent response was induced at MW-91D or other observation wells.

2.3 MW-91D, single packer at 666 feet, bottom of well at 644 feet

This test evaluated a primary water-bearing zone at 657 feet. The well was pumped for 42 minutes in this configuration at an average rate of approximately 0.6 gpm. The test was terminated to maintain submergence of the pump housing in water. The total water level was drawn down 42.64 feet in this zone. The LNAPL thickness decreased from approximately 8.5 to 2.5 feet after 28 minutes of pumping. Liquid levels above the packer reduced approximately 3.5 feet during the test, which may be attributed to minor leakage across the packer or lack of upflow from the primary water-bearing zone. A response was induced at MW-90D; approximately 1 foot LNAPL drawdown and approximately 10 feet water level drawdown. It should be noted, however, that liquid levels at MW-90D were not fully stabilized before start of this test. No other responses were identified at observation wells. After 16 hours of recovery while maintaining pressure on the packer, LNAPL and water levels recovered to approximately the pre-pumping levels.

3.0 DISCUSSION

The structural interpretation from the downhole geophysical logs and the elevations of the primary water-bearing fractures indicates a major sub-horizontal fracture between 655 and 658 feet above msl in the area of the release, correlating to a depth of approximately 75 feet bgs in this area and 50 feet or more below the top of bedrock and consisting of generally competent rock. The packer-assisted pump test of this zone at MW-90D resulted in a total removal of LNAPL. However, the results of this test cannot rule out a slow recharge of LNAPL within this zone. During subsequent drilling of MW-91DD (**Figure 1**), which was drilled to provide further vertical delineation of impacts in bedrock, the presence of gasoline vapors was noted at an elevation of approximately 660 feet (~73 feet bgs) as drilling advanced through this zone.

While the interconnectivity of the fractures described above was confirmed between MW-90D and -91D, aquifer parameters were ultimately not estimated due to the short test duration and simultaneous removal of both LNAPL and groundwater.

The subsurface consists of three general hydrostratigraphic units: the saprolite overburden, the transition zone at the top of bedrock, and the bedrock. The zone of greatest permeability and the primary zone of transport of LNAPL at this site is the transition zone at the top of bedrock, where the majority of flow is parallel to the bedrock surface. At locations where fractures intersect this transition zone, LNAPL may enter fractures. LNAPL may displace water in high-angle (vertical and sub-vertical) fractures if accompanied by a high head pressure of LNAPL or may be transported through or may be transported through a low-angle

fracture system from LNAPL accumulated in bedrock troughs surrounding the area of the release. Such troughs with evidence of LNAPL intersecting bedrock can be inferred from the OIP data in multiple directions from the release, but particularly to the north.

Sincerely,
Apex Companies, LLC

1 Geophysical Logging of Boreholes

During logging, each probe is connected to a steel armored wireline cable containing typically from 1 to 7 electrical conducting wires. The cable is physically wound on a mechanical drawworks and each probe is lowered or raised slowly in the borehole from a boom or sheave suspended above the borehole. The data is recorded directly to a computer acquisition device connected to the upper end of the electrical conductors. Power is supplied to the probes through the conductors, and a digitized signal is transmitted back to the recording device. Most logs are generated by lowering the probe to the bottom and logging up, with the exception of the temperature log, which is typically logged going down the hole to generate the best results by going thru a relatively undisturbed fluid column. Logging rates are generally between 4 and 25 feet per minute, with slower rates for the acoustic televiewer, moderate to slow rates for the temperature curve, and moderate to faster rates for the caliper probe. EM flowmeter data is recorded while stationary in the borehole at depths selected by the logger and/or site representative. The following logs were collected for each borehole:

1.1 Acoustic Televiewer (ATV)

The Century Geophysical 9804 acoustic televiewer creates images by transmitting and receiving an ultrasonic acoustic pulse reflected from the walls of the borehole. In-situ rock conditions can be viewed when evaluating the rock mass for joint locations, joint spacing and condition of the joints. The televiewer allows viewing of the borehole walls in areas of poor rock core recovery or in zones of weak and/or fractured rock. The borehole televiewers allow proper repositioning of the recovered core pieces or core sections where recovery was low and intervals have been lost. The amplitude of the reflected acoustic pulse represents the properties of the bedrock formation. Lighter colored features are generated from the higher amplitude waves and represent a sound and smooth borehole. Reflected energy that is lost in voids, fractures and discontinuities produces dark bands on the amplitude log. The ATV requires the borehole to be filled with fluid but can be performed in murky conditions or holes filled with drilling slurry.

The acoustic televiewer excels at creating images of the fractures, joints, bedding planes and other structural features of the bedrock formation. Fractures or other planar features that intersect the borehole wall will appear as sinusoidal waves in the televiewer image. The dip direction of the feature can be determined by the orientation of the low side of the sinusoidal wave. Televiewers orient their images utilizing a three-axis magnetometer and three-component accelerometer allowing accurate orientation recording of the images from inclined or vertical boreholes. The three-dimensional image of the borehole wall is displayed in two dimensions by “unwrapping” the image along a common point, typically the north side of a borehole. The probes are centered in the borehole with centralizing bands in two locations along the probe. Structural features are picked manually from the televiewer logs

searching for the sinusoidal forms. Each feature detected is rated based on type of feature (fracture, bedding, etc.) and apparent aperture (thickness of opening measured in tenths of an inch) then its apparent orientation is depicted on the log by displaying a matching sinusoid superimposed on the borehole image. The feature information is then processed using the borehole deviation measurements to generate a true dip dataset. The true dip data is displayed as a tadpole style structure log and on an equal area polar projection diagram.

The polar projection diagram is used to summarize the structural orientation information contained in the true dip dataset. It can be easier to identify structural features and relations from the projection plot than from the structure log columns. A polar projection plot displays each pair of orientation data (i.e., dip and dip direction) as a single point in the projection plane. The distance from the center of the projection plane represents the dip angle, the azimuth position on the circle shows the dip direction.

1.2 Fluid Temperature/Conductivity/Natural Gamma

Temperature logs are the recorded temperature of the surrounding air or water with respect to depth. Temperature logs can indicate where water is entering or leaving a borehole. Abrupt changes in the slope of the temperature curve can be used to locate and monitor zones of interest. During a temperature survey, data accuracy is ensured by maintaining a downward logging speed of approximately 8 to 10 feet per minute. This provides an adequate time buffer to allow sensors to respond to minor temperature changes. The fluid conductivity log provides borehole fluid electrolytic measurements. Water with lower dissolved solids concentrations will yield much lower fluid conductivity values than a liquid containing a relatively high amount of dissolved solids. Fluid conductivity curves often deflect where water producing apertures or formations are transmitting water into or out of the well with a contrasting composition relative to the borehole fluid. The fluid conductivity log is usually collected simultaneously with the temperature log.

Gamma logs are one of the most widely used geophysical logs. They are used primarily to identify changes in lithology and the relative amounts of original clay material in various sedimentary units and transformed metamorphic units. The gamma log provides a record of the total natural gamma radiation detected within a given energy range. The most significant naturally occurring, gamma-emitting radioisotopes are potassium-40 and the daughter products of the uranium and thorium decay series. If gamma-emitting artificial radioisotopes have been introduced by humans into the groundwater system, they will also produce part of the radiation measured. A Century 8144 probe was used in this investigation to acquire these three data sets.

1.3 Single Point Resistance

Single point resistance systems measure the resistance in ohms between an electrode in the borehole and one buried at the surface. Conductive minerals and surface conduction on clay particles can

contribute to current flow in some rocks. Current flow is also affected by the amount of water and its dissolved constituents in the flow pattern. As a result, the effective porosity of a formation and the interstitial fluid salinity have the greatest effect on resistance. The interpretation of resistance logs is generally straightforward. A sand unit or sandstone usually gives a relatively high ohmic response while clay and shale units will have a much lower ohmic value. Crystalline and metamorphic rocks react similarly, with the more quartzitic rocks having higher resistance, tight formations have a high resistance and fractured zones with interstitial fluids or weathered rock with clay typically have a lower resistance. A Century 8144 probe was used in this investigation for the single point resistance log.

1.4 3-Arm Caliper

Caliper measurements are simply the average diameter of the borehole at a given depth. The caliper tool collects and transmits data as the tool is lifted upwards in the borehole. Three spring-loaded arms, acting in conjunction with each other, measure the average diameter of the borehole. The caliper tool is used to locate fractures, determine casing intervals and measure the overall diameter of the drilled hole. Caliper logs are collected by calibrating the down-hole tool with a measuring template, lowering the tool to the desired depth, remotely opening the feeler arms, and then logging the open borehole and casing diameter in an upward direction. A Century 9064 probe was used in this investigation for the caliper log.

1.5 EM Flowmeter

The model 9721 EM Flowmeter tool is used in the environmental and hydrology industries to measure fluid movement in a borehole. The instrument measures flow rates using the principal of Faraday's Law of Induction. The downhole probe consists of an electromagnet and two electrodes located 180 degrees apart and 90 degrees to the magnetic field inside of a hollow cylinder. The voltage induced by a conductor moving at right angles through the magnetic field is directly proportional to the velocity of the conductor (water) through the field. The tool is capable of measuring low velocity flow rates down to 50 ml/min (0.01 GPM) and increased flow rates up to 40 liters/min (10.57 GPM), through the tool's 1-inch inside diameter sensor. When using the tool to measure low velocity flow rates a rubber skirt is attached to the outside of the sensor to block off the bore hole and force the fluid to pass through the 1-inch diameter opening inside the sensor coil. The electromagnetic flowmeter log is lowered to the bottom of each hole and raised to various stationery flow stations to record the flow at that station. Flow stations were selected based on the televiewer log and caliper fracture locations and the temperature and fluid conductivity results. Typically flow stations were taken above and below a zone of interest to see change in flow at various locations in the boring.

2 Composite Geophysical Log Summaries

2.1 Site: Colonial Pipeline, Huntersville, NC.

Note for all logs: Datum for Geophysical logs is Ground Level, and all footage references are the measured depth below ground level in each hole. Structural features with tabulated dip angle and dip direction of fractures and other features, graphical vertical logs of the ATV data, EM flowmeter data, and composite logs were submitted in December of 2020.

2.1.1 MW-7D

> Water Level was 26.75 feet on 12/11/2020 when logged; Base of casing was set at 78.3 feet in this hole. The bottom of the logged interval is 167.98 feet.

> A very small water flow up the hole was measured (on the order of 0.01 GPM), from essentially the bottom of the hole up to near base of casing.

> The caliper log indicates a smooth borehole with little variation aside from the larger fracture apertures.

> The interval from 122 feet to 128 feet has indications of potential water movement indicated by 3 temperature spikes associated with a major open fracture at 124.6 feet. The fracture has an aperture of 2.97 inches a high angle dip of 74.97 degrees with a dip direction azimuth of 40.64 degrees and is one of only 3 fractures with an orientation in the northeast quadrant.

> ATV/Stereonet data shows fractures have a dip direction loosely trending west.

2.1.2 MW-25D

> Water Level was 44.5 feet on 12/11/2020 when logged; Base of casing was set at 74.5 feet in this hole. Bottom of the logged interval is 137.39 feet.

> A very small water flow up the hole was measured (on the order of 0.02 - 0.03 GPM), grading from 0.03 at the bottom flow station at 131.0 feet to effectively 0.0 GPM at 115.0 feet and back to 0.03 GPM up hole at 68 feet.

> The caliper log indicates a smooth borehole with little variation.

> There were no indications of water movement based on Temperature logs.

> ATV/Stereonet data shows 8 high angle fractures from 45 to 79 degrees dip angle. Of the high angle fractures, a group of 5 have a dip direction azimuth between 16 and 45 degrees. The remaining 3 high angle fractures are oriented between 287 – 341 degrees.

2.1.3 MW-36D

> Water Level was 22.2 feet on 12/10/2020 when logged; Base of casing was set at 79.1 feet in this hole. The bottom of the logged interval is 138.42 feet.

> Effectively zero flow was measured from the bottom to 110.0 feet. A very slight up hole flow of 0.3 GPM was measured at 100.0 feet decreasing to 0.14 GPM at 85.0 feet.

> The caliper log indicates a relatively smooth borehole with a slight decrease in diameter and slight increase in rugosity from 115.7 feet to bottom.

> The interval from 110.0 feet to 124.0 feet has indications of potential water movement indicated by 3 temperature spikes associated with the top of an alternating light and dark zone on the acoustic televiewer log that spans most of the interval. This interval contains only 1 fracture at 115.45 feet with a very slight aperture, a 12.86 degree dip angle, and dip direction azimuth of 302.74 degrees. This zone is also outlined by a decrease in single point resistivity.

> ATV/Stereonet data shows 8 high angle fractures between 66 and 77 degrees dip angle with a dip direction azimuth between 60 and 80 degrees. All other fractures have a dip of less than 15 degrees. The interval below 124.0 feet to the bottom of the borehole contains all but 4 of the 21 fractures indicated on the ATV log including all of the high angle fractures.

2.1.4 MW-57D

> Water Level was 8.8 feet on 12/11/2020 when logged; Base of casing was set at 94.9 feet in this hole. The bottom of the logged interval is 79.73 feet.

> A very small water flow down the hole was measured (on the order of 0.01 GPM), from essentially the bottom of the hole up to near base of casing. Due to the shallow hole depth and depth of casing, only 2 EM flowmeter stations were recorded in the open hole interval.

> The caliper log indicates a smooth borehole.

> ATV image shows a broken zone from the base of casing at 94.9 feet to 96.9 feet with 1 major fracture at 95.8 feet with an aperture of 1.96 inches, 20.01 degree dip angle, and dip direction azimuth of 197.8 degrees. Temperature spikes in this zone suggest water movement.

> ATV/Stereonet data shows 6 total features. 1 high angle fracture at 101.11 feet with a 64.03 degree dip angle and a dip direction azimuth of 41.3 degrees. All other fractures have a dip of less than 45 degrees. The feature at 103.88 feet is not classified as a fracture. It delineates a sharp contact between an upper zone of relatively high ATV amplitude (indicating tight rock mass) from a lower zone of low ATV amplitude (indicating soft, weak or fractured rock mass).

2.1.5 MW-59D

> Water Level was 43.1 feet on 12/10/2020 when logged; Base of casing was set at 70.0 feet in this hole. The bottom of the logged interval is 160.79 feet.

> Effectively zero flow was measured in this hole.

> The caliper log indicates a smooth borehole.

> Temperature spikes at approximately 110 feet and 151 feet could indicate water movement but do not correlate with any other log responses.

> ATV/Stereonet data shows the following fracture groups:

- 5 high angle fractures between 82 and 86 degree dip angle with dip direction azimuth between 68 and 89 degrees.
- 5 high angle fractures between 73 and 76 degree dip angle with dip direction azimuth between 13 and 43 degrees.
- 2 high angle fractures with 47.3 and 75.09 degree dip angles and dip direction azimuth of 354.6 and 359.7 degrees respectively.
- 2 high angle fractures with 62.93 and 65.97 degree dip angles and dip direction azimuth of 143.0 and 139.3 degrees respectively.

2.1.6 MW-61D

> Water Level was 50.7 feet on 12/11/2020 when logged; Base of casing was set at 77.5 feet in this hole. The bottom of the logged interval is 112.47 feet.

> A very small water flow down the hole was measured (on the order of 0.02 GPM) at 118.0. The rest of the open hole interval measured essentially zero flow.

> The caliper log indicates a variable and rough borehole. Major increases in borehole diameter are measured at 81 – 83 feet, 85-86 feet, and again at 99 -103.

> The interval from casing to 102.5 feet appears to be soft and has a fracture zone at 87.5 – 89 feet. Temperature spikes at 82.5, 89.5, and 91.4 feet suggest water movement. A sharp deflection in resistivity at 98.0 - 103.0 feet is also present.

> ATV/Stereonet data shows. 1 high angle fracture at 90.79 feet with a 62.11 degree dip angle and a dip direction azimuth of 143.66 degrees. 6 fractures have a dip of less than 26.0 degrees. 2 features are not classified as fractures. They delineate a sharp contact between zones of relatively high ATV amplitude (indicating tight rock mass) from zones of low ATV amplitude (indicating soft, weak or fractured rock mass).

2.1.7 Walker WSW

> Water Level was 28.7 feet on 12/10/2020 when logged; Base of casing was set at 48.1 feet in this hole. The bottom of the logged interval is 178.36 feet.

> Low Up hole flow rates were measured in this hole. Increasing from bottom to top.

- 0.03 GPM at 170 feet.

- 0.05 – 0.06 GPM from 150 feet to 70 feet.
- 0.08 GPM near base of casing

> The caliper log indicates a relatively smooth borehole with increased diameter at corresponding fracture aperture.

> Several temperature spikes from 105 feet to 111 feet indicate formation water movement and correlate with ATV fracture data.

> There are 5 major fractures with large aperture from the base of casing to 74 feet. The fractures have varying dip angle and orientation.

> The rock mass is fractured from 81.0 feet to 142.0 feet 35 of 40 fracture features are identified in this interval

> ATV/Stereonet data shows the following fracture groups:

> 10 fractures with variable dip angle have a dip direction azimuth between 270 and 330 degrees.

> 13 fractures with variable dip angle have a dip direction azimuth between 60 and 110 degrees.

1 Geophysical Logging of Boreholes

During logging, each probe is connected to a steel armored wireline cable containing typically from 1 to 7 electrical conducting wires. The cable is physically wound on a mechanical drawworks and each probe is lowered or raised slowly in the borehole from a boom or sheave suspended above the borehole. The data is recorded directly to a computer acquisition device connected to the upper end of the electrical conductors. Power is supplied to the probes through the conductors, and a digitized signal is transmitted back to the recording device. Most logs are generated by lowering the probe to the bottom and logging up, with the exception of the temperature log, which is typically logged going down the hole to generate the best results by going through a relatively undisturbed fluid column. Logging rates are generally between 4 and 25 feet per minute, with slower rates for the acoustic televiewer, moderate to slow rates for the temperature curve, and moderate to faster rates for the caliper probe. EM flowmeter data is recorded while stationary in the borehole at depths selected by the logger and/or site representative. The following logs were collected for each borehole:

1.1 Acoustic Televiewer (ATV)

The Century Geophysical 9804 acoustic televiewer creates images by transmitting and receiving an ultrasonic acoustic pulse reflected from the walls of the borehole. In-situ rock conditions can be viewed when evaluating the rock mass for joint locations, joint spacing and condition of the joints. The televiewer allows viewing of the borehole walls in areas of poor rock core recovery or in zones of weak and/or fractured rock. The borehole televiewers allow proper repositioning of the recovered core pieces or core sections where recovery was low, and intervals have been lost. The amplitude of the reflected acoustic pulse represents the properties of the bedrock formation. Lighter colored features are generated from the higher amplitude waves and represent a sound and smooth borehole. Reflected energy that is lost in voids, fractures and discontinuities produces dark bands on the amplitude log. The ATV requires the borehole to be filled with fluid but can be performed in murky conditions or holes filled with drilling slurry.

The acoustic televiewer excels at creating images of the fractures, joints, bedding planes and other structural features of the bedrock formation. Fractures or other planar features that intersect the borehole wall will appear as sinusoidal waves in the televiewer image. The dip direction of the feature can be determined by the orientation of the low side of the sinusoidal wave. Televiewers orient their images utilizing a three-axis magnetometer and three-component accelerometer allowing accurate orientation recording of the images from inclined or vertical boreholes. The three-dimensional image of the borehole wall is displayed in two dimensions by “unwrapping” the image along a common point, typically the north side of a borehole. The probes are centered in the borehole with centralizing bands in two locations along the probe. Structural features are picked manually from the

televiewer logs searching for the sinusoidal forms. Each feature detected is rated based on type of feature (fracture, bedding, etc.) and apparent aperture (thickness of opening measured in tenths of an inch) then its apparent orientation is depicted on the log by displaying a matching sinusoid superimposed on the borehole image. The feature information is then processed using the borehole deviation measurements to generate a true dip dataset. The true dip data is displayed as a tadpole style structure log and on an equal area polar projection diagram.

The polar projection diagram is used to summarize the structural orientation information contained in the true dip dataset. It can be easier to identify structural features and relations from the projection plot than from the structure log columns. A polar projection plot displays each pair of orientation data (i.e., dip and dip direction) as a single point in the projection plane. The distance from the center of the projection plane represents the dip angle, the azimuth position on the circle shows the dip direction.

1.2 Fluid Temperature/Conductivity/Natural Gamma

Temperature logs are the recorded temperature of the surrounding air or water with respect to depth. Temperature logs can indicate where water is entering or leaving a borehole. Abrupt changes in the slope of the temperature curve can be used to locate and monitor zones of interest. During a temperature survey, data accuracy is ensured by maintaining a downward logging speed of approximately 8 to 10 feet per minute. This provides an adequate time buffer to allow sensors to respond to minor temperature changes. The fluid conductivity log provides borehole fluid electrolytic measurements. Water with lower dissolved solids concentrations will yield much lower fluid conductivity values than a liquid containing a relatively high number of dissolved solids. Fluid conductivity curves often deflect where water producing apertures or formations are transmitting water into or out of the well with a contrasting composition relative to the borehole fluid. The fluid conductivity log is usually collected simultaneously with the temperature log.

Gamma logs are one of the most widely used geophysical logs. They are used primarily to identify changes in lithology and the relative amounts of original clay material in various sedimentary units and transformed metamorphic units. The gamma log provides a record of the total natural gamma radiation detected within a given energy range. The most significant naturally occurring, gamma-emitting radioisotopes are potassium-40 and the daughter products of the uranium and thorium decay series. If gamma-emitting artificial radioisotopes have been introduced by humans into the groundwater system, they will also produce part of the radiation measured. A Century 8144 probe was used in this investigation to acquire these three data sets.

1.3 Single Point Resistance

Single point resistance systems measure the resistance in ohms between an electrode in the borehole and one buried at the surface. Conductive minerals and surface conduction on clay particles can contribute to current flow in some rocks. Current flow is also affected by the amount of water and its dissolved constituents in the flow pattern. As a result, the effective porosity of a formation and the interstitial fluid salinity have the greatest effect on resistance. The interpretation of resistance logs is generally straightforward. A sand unit or sandstone usually gives a relatively high ohmic response while clay and shale units will have a much lower ohmic value. Crystalline and metamorphic rocks react similarly, with the more quartzitic rocks having higher resistance, tight formations have a high resistance and fractured zones with interstitial fluids or weathered rock with clay typically have a lower resistance. A Century 8144 probe was used in this investigation for the single point resistance log.

1.4 3-Arm Caliper

Caliper measurements are simply the average diameter of the borehole at a given depth. The caliper tool collects and transmits data as the tool is lifted upwards in the borehole. Three spring-loaded arms, acting in conjunction with each other, measure the average diameter of the borehole. The caliper tool is used to locate fractures, determine casing intervals, and measure the overall diameter of the drilled hole. Caliper logs are collected by calibrating the down-hole tool with a measuring template, lowering the tool to the desired depth, remotely opening the feeler arms, and then logging the open borehole and casing diameter in an upward direction. A Century 9064 probe was used in this investigation for the caliper log.

1.5 EM Flowmeter

The model 9721 EM Flowmeter tool is used in the environmental and hydrology industries to measure fluid movement in a borehole. The instrument measures flow rates using the principal of Faraday's Law of Induction. The downhole probe consists of an electromagnet and two electrodes located 180 degrees apart and 90 degrees to the magnetic field inside of a hollow cylinder. The voltage induced by a conductor moving at right angles through the magnetic field is directly proportional to the velocity of the conductor (water) through the field. The tool is capable of measuring low velocity flow rates down to 50 ml/min (0.01 GPM) and increased flow rates up to 40 liters/min (10.57 GPM), through the tool's 1-inch inside diameter sensor. When using the tool to measure low velocity flow rates a rubber skirt is attached to the outside of the sensor to block off the bore hole and force the fluid to pass through the 1-inch diameter opening inside the sensor coil. The electromagnetic flowmeter log is lowered to the bottom of each hole and raised to various stationery flow stations to record the flow at that station. Flow stations were selected based on the televiewer log and caliper fracture locations

and the temperature and fluid conductivity results. Typically flow stations were taken above and below a zone of interest to see change in flow at various locations in the boring.

2 Composite Geophysical Log Summaries

2.1 Site: Colonial Pipeline, Huntersville, NC.

Note for all logs: Datum for Geophysical logs is Ground Level, and all footage references are the measured depth below ground level in each hole. Structural features with tabulated dip angle and dip direction of fractures and other features, graphical vertical logs of the ATV data, EM flowmeter data, and composite logs were submitted in October 2021. Logging was conducted on September 14 and 21 and October 08 and 11, 2021.

2.1.1 MW-89D

> Water Level was 43.6 feet on 9/14/2021 when logged; base of casing was set at 68.4 feet in this hole. The bottom of the logged interval is 140.3 feet.

> Very slight up hole flow was measured at all flow stations.

> The caliper log indicates a smooth borehole with little variation and no large open fractures.

> The interval from 96.0 feet to 105.0 feet has indications of potential water flow. This is indicated by flow readings of 0.02 GPM at 96.0 and 105.0 feet and by several temperature spikes present in the interval.

> ATV/Stereonet data shows 14 fractures. The following summary is grouped by dip direction.

- 6 – dip angle 59 – 77, dip direction 0 – 60 degrees
- 3 – dip angle 62 – 70, dip direction 245 – 273 degrees
- 5 – low dip angle <10 degrees

2.1.2 MW-90DD

> This hole was logged on 9/14/2021 and again on 10/11/2021 due to low water level.

> Water Level was 159.8 feet on 09/14/2021 and 76.8 feet when re-logged on 10/11/2021; base of casing was set at 119.1 feet in this hole. Bottom of the logged interval is 193.3 feet.

> Very slight up hole flow was measured at 2 flow stations on 9/14/2021. Slight downhole flow was measured at all stations on 10/11/2021. Rain prior to the 10/11/2021 log could explain the downhole flow.

> The caliper log indicates a smooth borehole. An uncased portion of the larger diameter top hole can be seen directly below the bottom of casing.

> Temperature/Resistivity logs do not indicate any definitive areas of inflow.

> ATV/Stereonet data from the 10/11/2021 log shows 18 fractures. Fractures are fairly evenly distributed in dip direction with slightly higher dip angles to the south.

2.1.3 MW-91DD

> Water Level was 195.8 feet on 09/21/2021 when logged; base of casing was set at 120.0 feet in this hole. The bottom of the logged interval is 199.8 feet.

> Due to low water level minimal data was acquired.

> A downhole video was recorded on 10/11/2021. The video showed no significant inflow. Fractures recorded on the video were tight and partially to completely filled.

> Negligible flow was measured at a single flow station.

> The caliper log indicates a relatively smooth borehole with little variation.

> ATV/Stereonet data shows 1 feature at 196.9 feet. A tight fracture with a dip angle of 79.80 degrees and dip direction of 224.76 degrees and was verified on the downhole video.

2.1.4 MW-97D

> Water Level was 23.1 feet on 10/8/2021 when logged; base of casing was set at 88.7 feet in this hole. The bottom of the logged interval is 133.3 feet.

> Negligible flow was measured at each flow station.

> The caliper log indicates a smooth borehole.

> ATV and Temperature/Resistivity logs indicate a flow interval at 123.0 – 127.0 feet. Decreased resistivity along with a group of minor and large fractures are present. The temperature log also spikes just above this interval.

> A large fracture at 115.8 feet exhibits decreased resistivity, potentially indicating an area of flow. No other supporting data is present on the other logs.

> ATV/Stereonet data shows 16 fractures. The following summary is grouped by dip direction.

- 7 – dip angle 39 – 75, dip direction 255 – 279 degrees

- 2 – dip angle 77– 83, dip direction 167 – 182 degrees
- 3 – dip angle 38 – 40, dip direction 327 – 357 degrees
- 4 – low dip angle <12 degrees

2.1.5 MW-04D

> Water Level was 30.2 feet on 10/8/2021 when logged; base of casing was set at 89.3 feet in this hole. The bottom of the logged interval is 143.9 feet.

> Negligible flow was measured at each flow station.

> The caliper log indicates a smooth borehole.

> ATV and Temperature/Resistivity logs indicate several potential flow intervals corresponding to zones of decreased resistivity coupled with groups of fractures.

> ATV and Temperature/Resistivity data indicate several potential flow intervals. Zones of decreased resistivity coupled with groups of fractures occur at the intervals below.

- 99.0 – 103.0 feet. Decreased resistivity coupled with 3 minor fractures and a vertical feature.
- 106.0 – 111.0 feet. Decreased resistivity coupled with a mixed fracture group and vertical feature. Bound by darker zones potentially indicating increased weathering.
- 1140.0 feet to bottom. Alternating zones of decreased resistivity and fracture groups. A temperature spike at 127.0 feet corresponds to a fractured zone from 121.0 – 129.0 feet.

> ATV/Stereonet data shows 22 fractures. The following summary is grouped by dip direction.

- 5 – dip angle 65 – 75, dip direction 33 – 57 degrees
- 4 – dip angle 41– 81, dip direction 82 – 111 degrees
- 3 – dip angle 40 – 72, dip direction 149 – 179 degrees
- 4 – dip angle 34 – 63, dip direction 273 – 286 degrees
- 4 – dip angle 59 – 77, dip direction 329 – 359 degrees
- 2 - low dip angle <10 degrees

Sincerely,

MARSHALL MILLER & ASSOCIATES, INC.

GEOPHYSICAL REPORTS

February 24, 2022

Mr. John Wyatt
Colonial Pipeline Company
4295 Cromwell Rd. #311
Chattanooga, Tennessee 37421

Re: **Summary of Structural Geology Data from Acoustic Televiewer Downhole Geophysical Logging**
Colonial Pipeline Company – 2020-L1-2448 Release Incident
Huntersville, Mecklenburg County, North Carolina
Incident Number 95827

To Whom it May Concern:

Apex Companies, LLC (dba Maryland Apex Engineering, PC; Apex) retained Marshall Miller & Associates (MM&A) on behalf of Colonial Pipeline Company to prepare a summary of structural geology data associated with downhole Acoustic Televiewer (ATV) logging at bedrock wells associated with Incident Number 95827 in Huntersville, Mecklenburg County, North Carolina. Apex concurs with the means and methods MM&A employed for evaluation of the ATV data.

If you have any questions or concerns, please do not hesitate to contact the undersigned at (704) 799-6390.

Sincerely,
Apex Companies, LLC (dba, Maryland Apex Engineering, PC)

Subject: Summary of Structural Geology Data from Acoustic Televiewer (*ATV*) Downhole Geophysical Logging for CPC Site, Huntersville, North Carolina

Dear John:

This report summarizes structural geology/discontinuity data collected by **Marshall Miller & Associates, Inc. (*MM&A*)** via Acoustic Televiewer (*ATV*) Downhole Geophysical Logging at the Colonial Pipeline Company (*CPC*) Site at Huntersville, North Carolina for **Apex Companies, LLC (*Apex*)**.

We greatly appreciate the opportunity to work with Apex. Please contact us if you have any questions or comments.

Sincerely,
Marshall Miller & Associates, Inc.

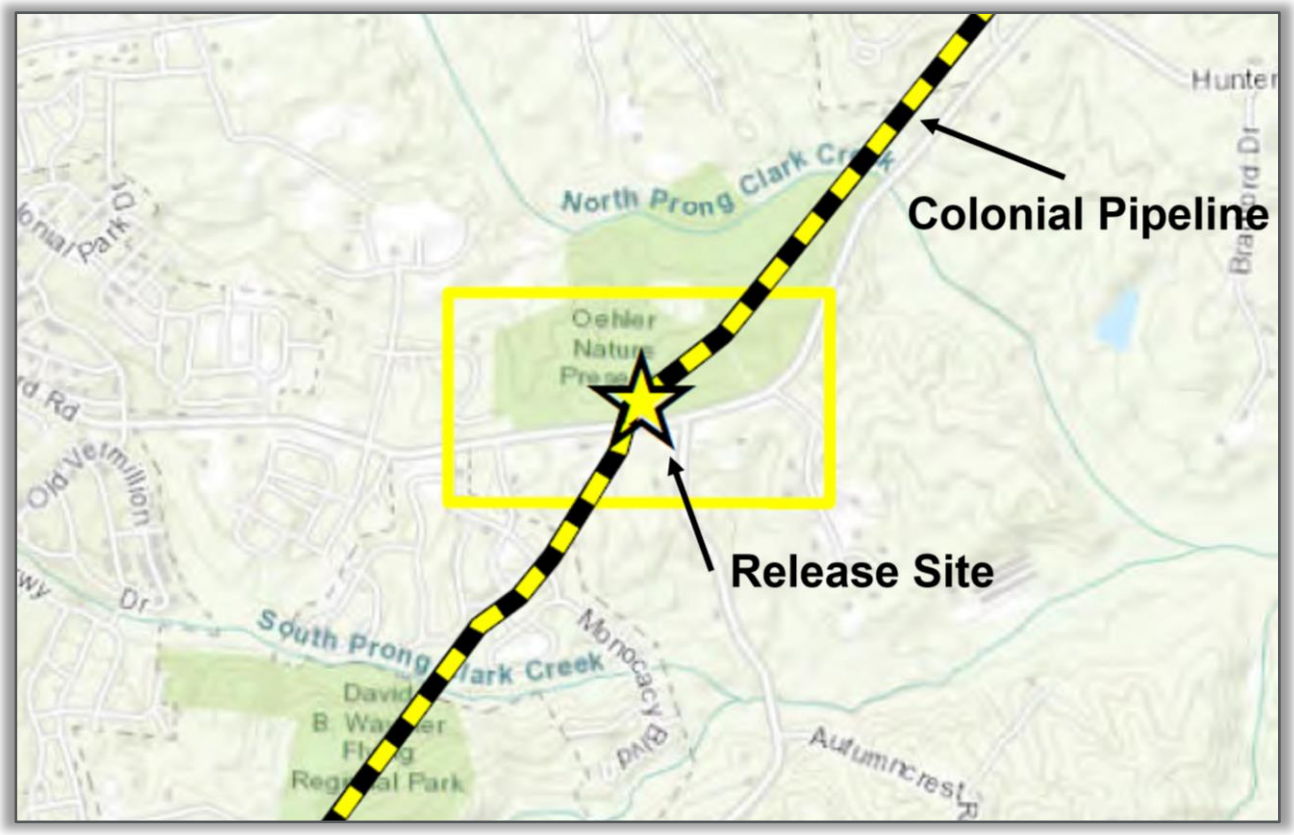
1 ..... Acoustic Televiewer (ATV) Data Summary Map

1 Introduction

Apex Companies, LLC (*Apex*) engaged **Marshall Miller & Associates, Inc. (*MM&A*)** to prepare a summary of discontinuity data as collected via Acoustic Televiewer (*ATV*) downhole logging technology. The subject site is located near Huntersville, North Carolina, on the Oehler Nature Preserve (*Figure 1-1*).

Figure 1-1: Location Map (map modified from October 2021 Revised Comprehensive Site Assessment Report)



The subject site is the location of a gasoline release from the Colonial Pipeline that occurred on August 14, 2020. Apex is managing mitigation efforts at the site, part of which has involved drilling and downhole geophysical logging of monitoring well borings. MM&A has provided ATV downhole geophysical logging services to the project in order to determine location and orientation of fractures intersected by the borings. This document summarizes the results of the ATV logging completed to date. The wells that were ATV logged and included in this summary include: MW-04D, MW-7D, MW-16D, MW-25D, MW-31D, MW-36D, MW-36D(R), MW-57D, MW-59D, MW-61D, MW-81D, MW-89D, MW-90D, MW-90DD, MW-91D, Walker WSW, and MW-97D.

2 Acoustic Televiewer (*ATV*) Logging

Data collection for this project utilized MM&A's in-house ATV equipment. The Century Geophysical 9804 ATV creates images by transmitting and receiving an ultrasonic acoustic pulse reflected from the walls of the borehole. In-situ rock conditions can be viewed when evaluating the rock mass for joint locations, joint spacing and condition of the joints. The televiewer allows viewing of the borehole walls in areas of poor rock core recovery or in zones of weak and/or fractured rock. The amplitude of the reflected acoustic pulse represents the properties of the bedrock formation. Lighter-colored features are generated from the higher amplitude waves and represent a sound and smooth borehole. Reflected energy that is lost in voids, fractures and discontinuities produces dark bands on the amplitude log. The ATV requires the borehole to be filled with fluid but can be performed in murky conditions or in holes filled with drilling slurry.

The ATV excels at creating images of the fractures, joints, bedding planes and other structural features of the bedrock formation. Fractures or other planar features that intersect the borehole wall will appear as sinusoidal waves in the televiewer image. The dip direction of the feature can be determined by the orientation of the low side of the sinusoidal wave. Televiewers orient their images utilizing a three-axis magnetometer and three-component accelerometer allowing accurate orientation recording of the images from inclined or vertical boreholes. The three-dimensional image of the borehole wall is displayed in two dimensions by "unwrapping" the image along a common point, typically the north side of a borehole. The ATV probe is centered in the borehole with centralizing bands in two locations along the probe. Structural features are picked manually by a geologist from the televiewer logs. Each feature detected is rated based on type of feature (fracture, bedding, etc.) and apparent aperture (thickness of opening measured in tenths of an inch) then its apparent orientation is depicted on the log by displaying a matching sinusoid superimposed on the borehole image. The feature information is then processed using the borehole deviation measurements to generate a true dip dataset. The true dip data is displayed as a tadpole style structure log or on a bottom hemisphere pole plot stereonet diagram. The stereonet representations of the discontinuity data are discussed below.

3 Discontinuity Data

Discontinuity data for the study is based on measurements collected via ATV logging of bore holes at the subject site. The geophysical logs completed by MM&A and used for this study are included in Appendix K of the October 2021 Revised CSA Report. Stereonet pole plots of the discontinuity data were created using DIPS software by **Rocscience Ltd. (*Rocscience*)**. A total of 259 discontinuity orientation measurements were used for the assessment. Discontinuity information is presented in the form of a stereonet pole plot projection and the measurements have been grouped into sets. Pole plots assist with grouping of data points and identification of sets of similar discontinuities. The stereonet projections are bottom hemisphere pole plots. The circular graph area of the pole plot should

be visualized in three dimensions as the viewer looking down into the inside of the bottom hemisphere (bottom half) of a three-dimensional sphere. Each dot on a pole plot represents the intersection of a pole, or line, with the lower hemisphere of the sphere, and extending through the midpoint of the sphere; a plane perpendicular with each line at the hemisphere center represents a single discontinuity.

Figure 3-1 is a stereonet projection of all the available data. The data is categorized by feature/fracture type (ex: major open fracture, minor open fracture, etc.) as shown in the legend. A larger version of this figure is included on *Exhibit 1* (attached to this report). The stereonet below also contains discontinuity set boundaries (orange boxes). The set boundaries indicate approximate groupings of similarly oriented discontinuities.

Figure 3-1: Stereonet Projection – All Holes by Feature Category

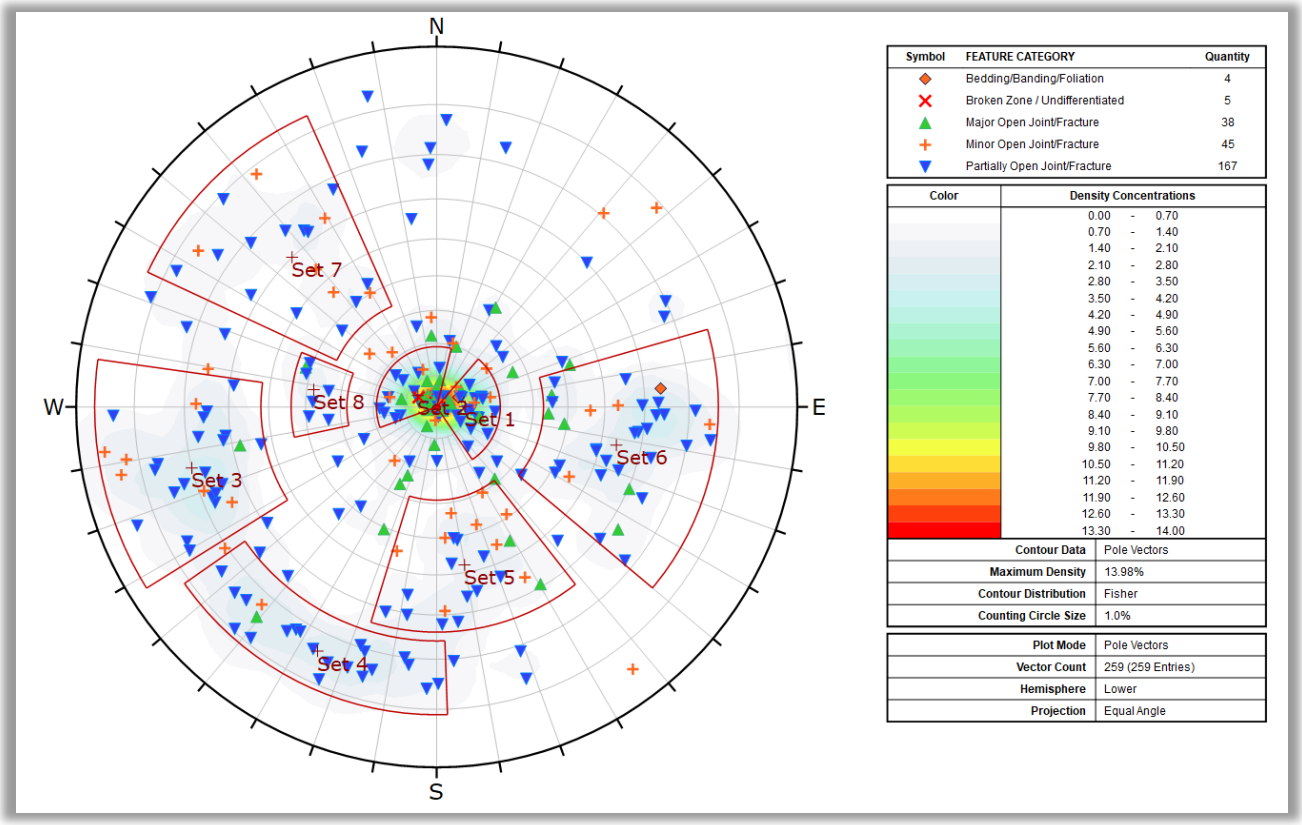


Table 3-1 summarizes basic statistics of the discontinuity data on a set-by-set basis. *Table 3-2* displays the distribution of the fractures across the holes and sets. Note that there are 259 discontinuities in total, with 197 discontinuities falling within the defined sets. *Table 3-3* contains aperture width (fracture openness) data for each set. The set numbers were generally selected taking into consideration the relative prevalence of the sets.

Table 3-3: Summary of Discontinuity Fracture Type and Aperture Width by Set

Discontinuity Set	Major Open Joint / Fracture	Broken Zone / Undifferentiated	Partially Open Joint / Fracture	Bedding/Banding/Foliation	Minor Open Joint / Fracture	Total Number of Fractures from ATV Interpretation	Total Measured Aperture Width (10ths of inch)
1	6	2	18	1	4	31	558.47
2	11	2	16	1	3	33	373.60
3	1	0	20	0	6	27	56.09
4	1	0	20	0	1	22	2.97
5	2	0	12	0	9	23	17.55
6	5	0	25	1	4	35	48.79
7	0	0	13	0	6	19	0.00
8	1	0	6	0	0	7	3.60

Figures 3-*2 and 3-3* illustrate the tightening of fracture aperture width with depth and by elevation, respectively. Fractures that are 0.05 tenths of an inch (0.005 inches) or less are considered tight and recorded as zero in the televiewer data due to line weight constraints within the software.

Figure 3-2: Aperture by Depth (feet)

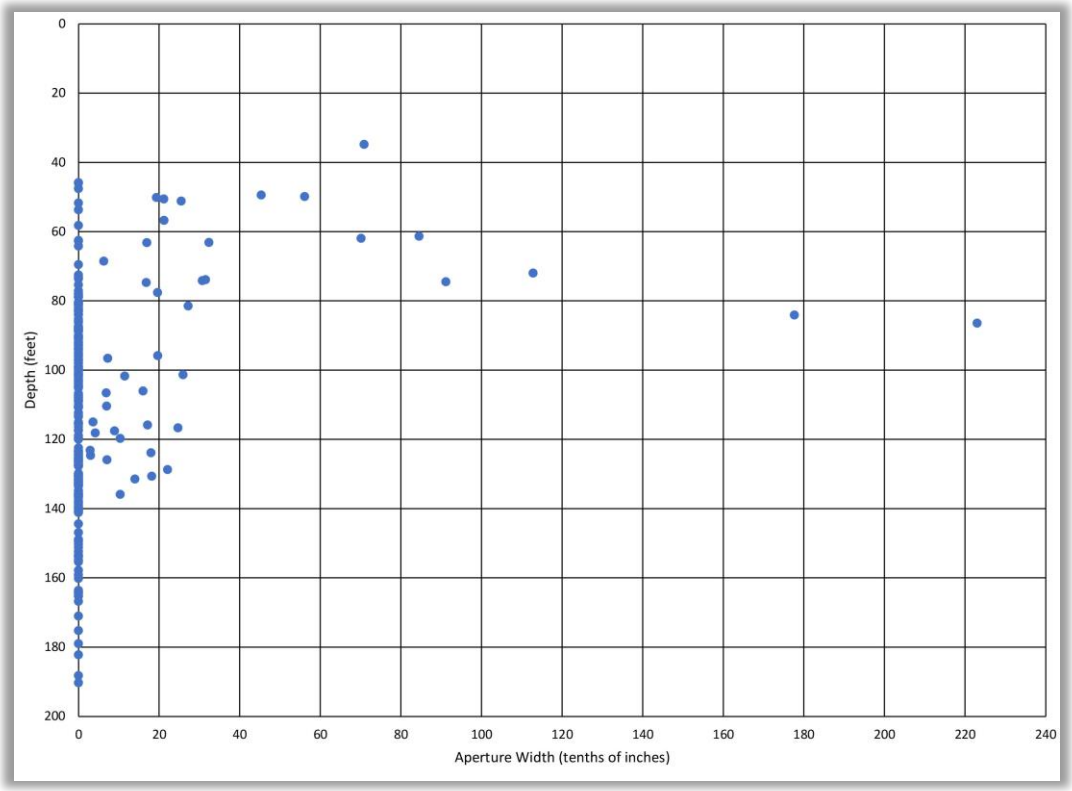

Figure 3-3: Aperture by Elevation (ft above msl)

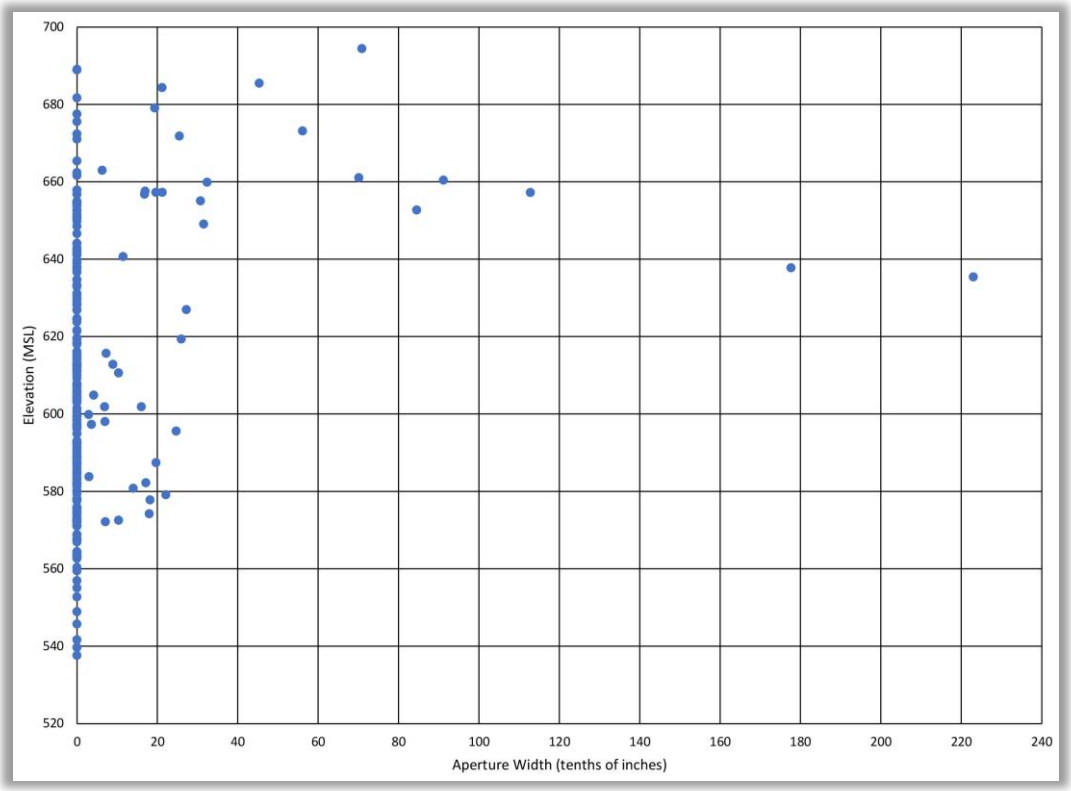


Notes associated with the discontinuity sets are included below:

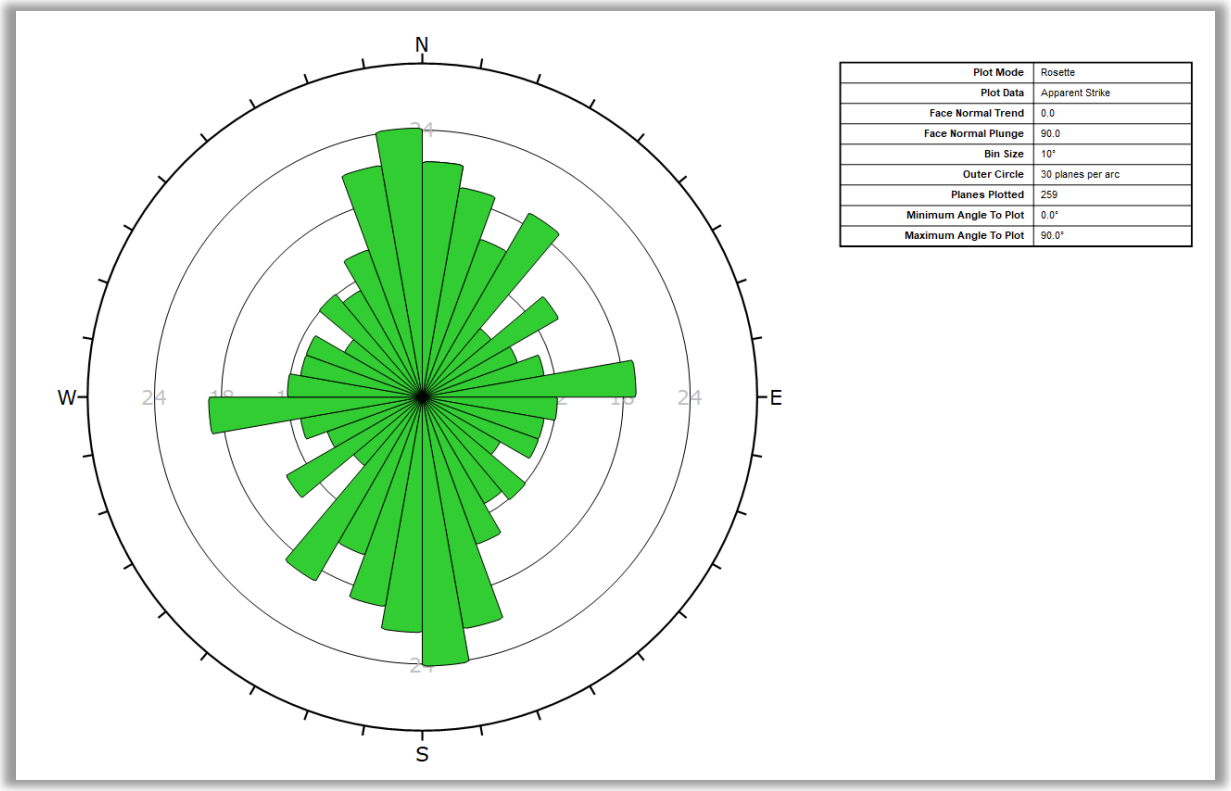
> Sets 1 and 2 have low dip angles (8-10 degrees from horizontal) compared to the rest of the sets. These sets contain the largest individual fractures and overall account for 87% of the measured aperture width within the sets. They also contain a majority of the Major/Open Joint/Fracture features. The horizontal fractures are predominant fractures across the site.

> Sets 1, 2, 3, and 6 have easterly and westerly dip directions, which correspond to north-south strike orientations.

> Sets 4, 7, and 8 have low measured aperture widths, while Set 5 has moderate overall aperture width.

Figure 3-4 is a Rosette Diagram of the available discontinuity data (holes with available ATV data). The Rosette Diagram is an alternative way of illustrating discontinuity orientation data. The Rosette Diagram summarizes the Apparent Strike of the discontinuities (strike direction of a discontinuity is perpendicular to dip direction). As is evident from the figure, there is a concentration of discontinuities in the area that strike in an approximate north to south direction (predominantly Sets 1,2,3,6, and 8). To a lesser extent, there are also northeast-southwest (Set 7) and east-west (Sets 4 and 5) apparent strike trends.

Figure 3-4: Rosette Plot – Apparent Strike Orientation



4 Discussion

To facilitate assessment of the variations in discontinuity characteristics across the subject site, stereonets were constructed illustrating trends for all available data, as well as indicating the specific discontinuity sets observed in each hole. *Figure 4-1* is a plan-view map of the site including stereonet projections for each hole with available ATV data. *Exhibit 1*, attached to this report, is a larger version of the map shown in *Figure 4-1*. The map illustrates the trends in discontinuity orientation variation across the site. The map also contains larger versions of stereonets (on the right side) that summarize the discontinuity data for all holes by feature and by hole number.

Figure 4-1: Plan-View Stereonet Summary Map (see Exhibit 1 for large version)

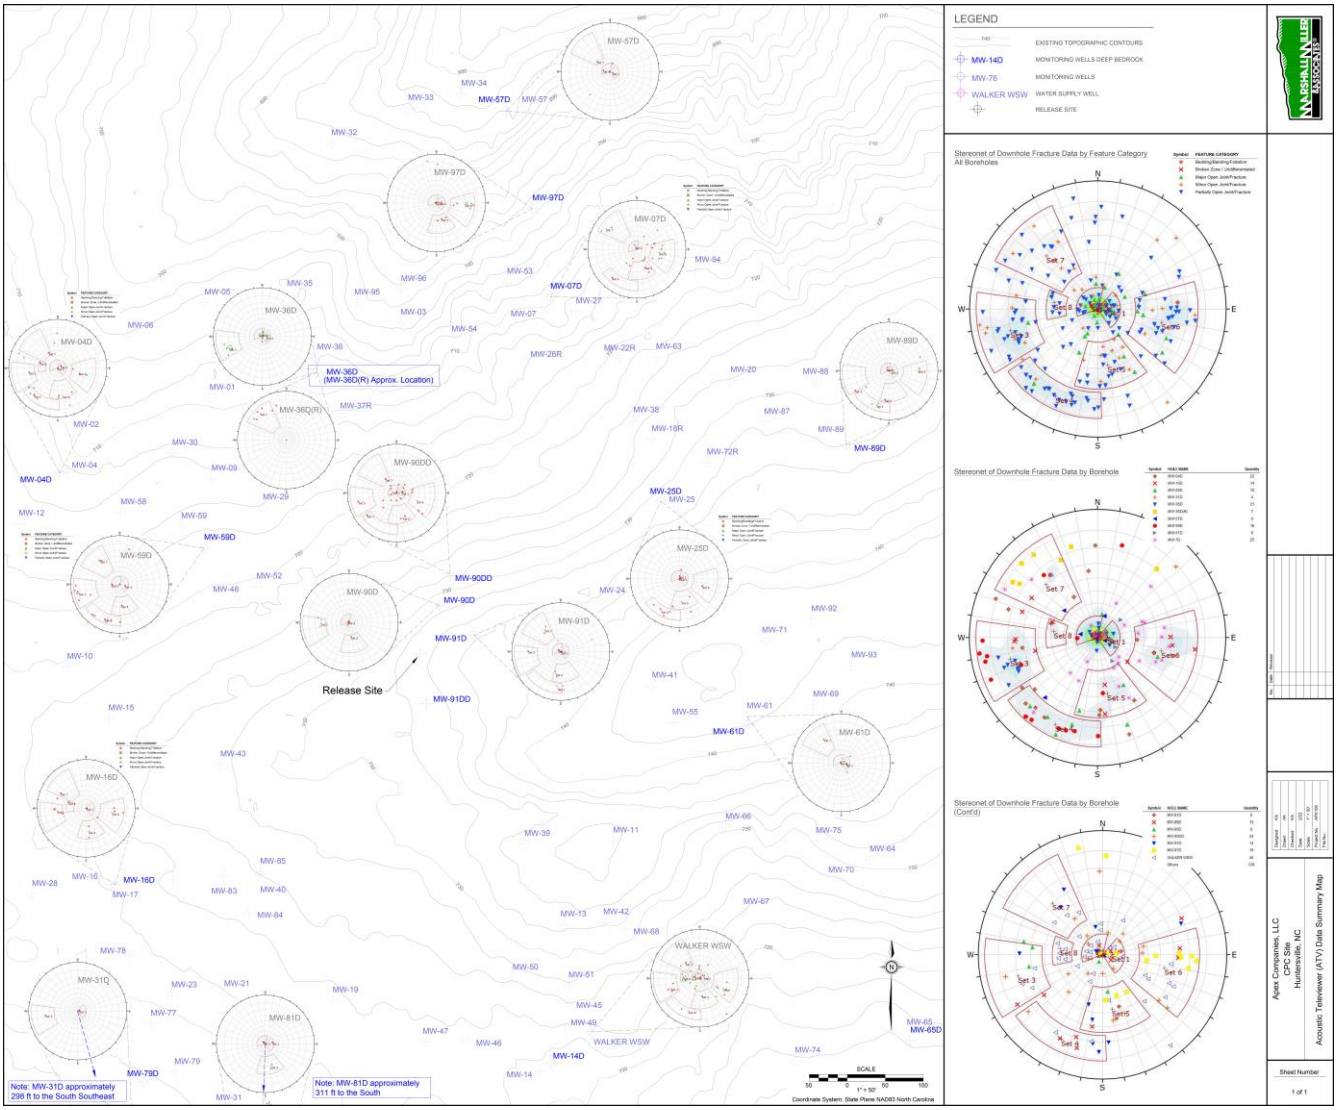


Figure 4-2 is a close-up view of one of the stereonets shown for an individual hole on *Figure 4-1* (*Exhibit 1*). The labels in *Figure 4-2* help to define the components of each hole-specific stereonet. On the stereonets for the individual holes, only the pole intersections for the discontinuities in a given hole are shown. Similarly, set boxes are only shown for sets that are represented in a given hole. The blue arrows in *Figure 4-2* indicate the direction of dip of the fracture sets (with strike direction being perpendicular to dip direction).

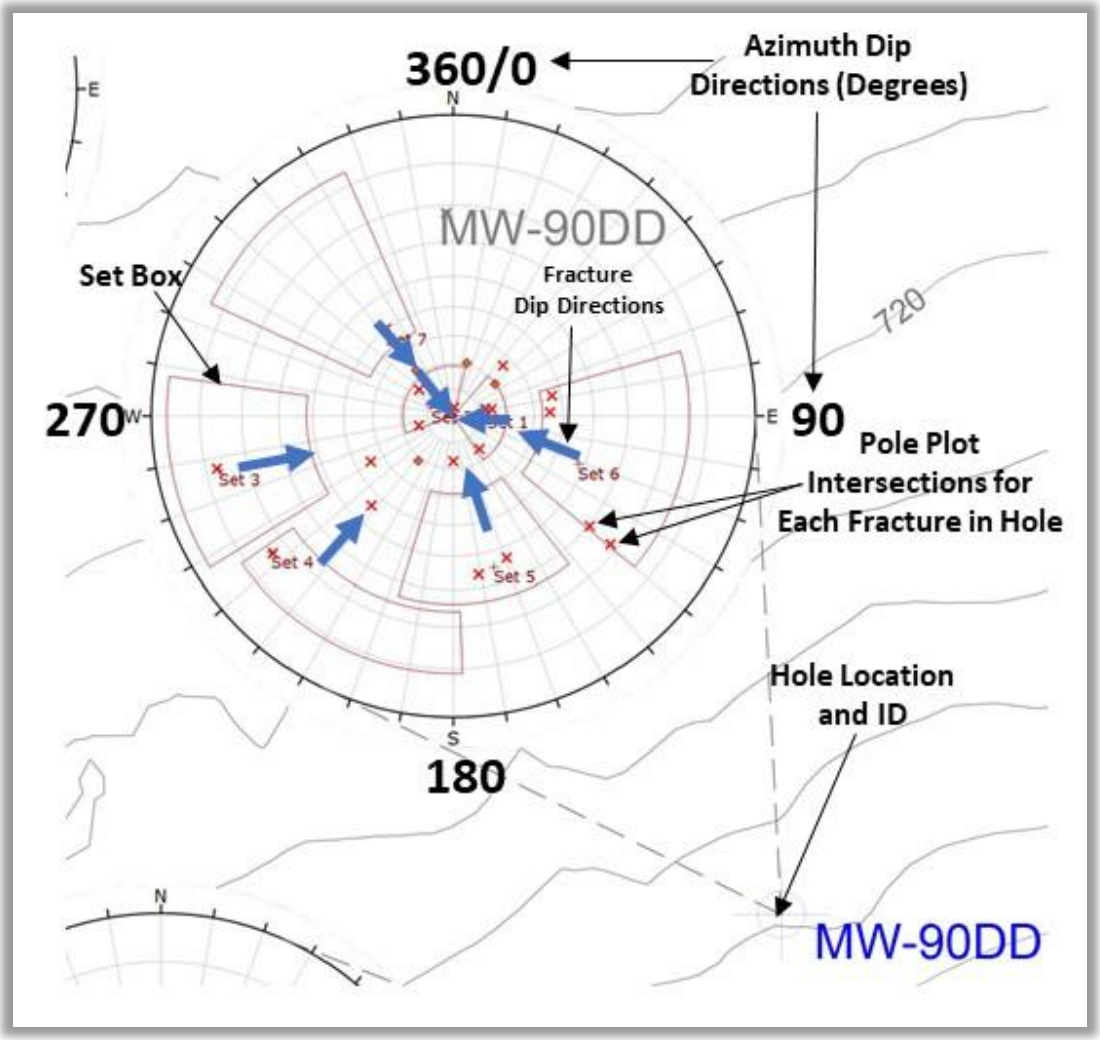
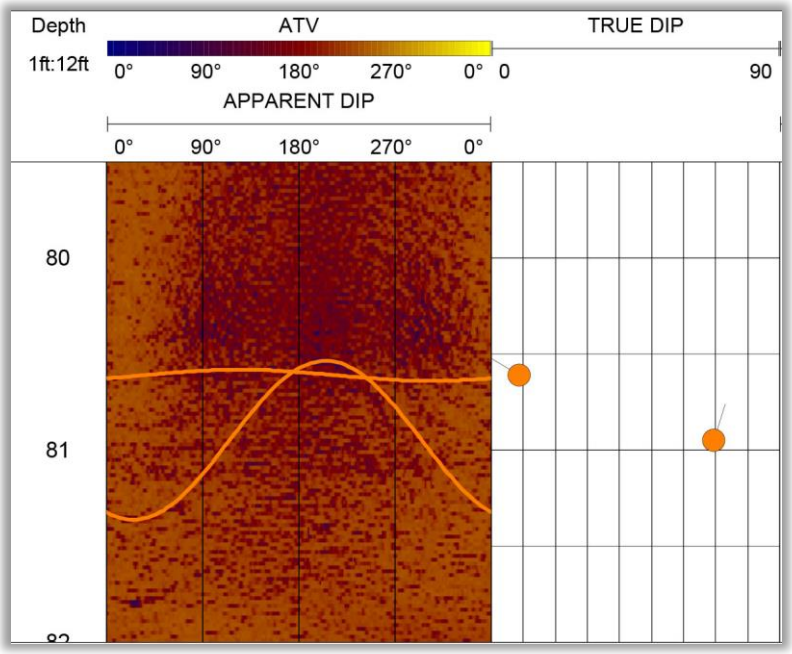
Figure 4-2: Definitions for Bottom Hemisphere Pole Plot Stereonets by Hole (for *Exhibit 1*)



5 Summary

The ATV data summarized for this report indicates that the more abundant and more open discontinuities observed in the holes tend to have a north-south strike orientation. The two more prominent discontinuity sets, Sets 1 and 2, have strike directions oriented in a north-south direction and those sets also have the largest observed in-situ fracture widths (aperture widths). Sets 1 and 2 also have relatively low dip angles (average 8-10 degrees) compared to other fracture sets. Assessment of the available ATV data in combination with the available groundwater information suggests that, while there is variability, groundwater flow in the bedrock may be controlled by flow associated with Discontinuity Sets 1 and 2 with potential interconnectivity with other higher angle fractures. *Figure 5-1* is an excerpt from the ATV log for borehole MW-89D showing the intersection of a high-angle fracture with a low-angle fracture. In addition to MW-89D, similar examples of intersections of high-angle fractures with low-angle fractures were observed in boreholes MW-36D and Walker WSW.

Figure 5-1: Excerpt from ATV Log for Borehole MW-89D



The analyses conducted for this assessment are based on industry standard practices and methodologies and are based on the data available at the time of the report. Our professional services have been performed using that degree of care and skill ordinarily exercised under similar circumstances by reputable engineering consultants practicing in this or similar localities. No other warranty, either expressed or implied, is made as to the professional advice included or intended for this analysis.

1 Geophysical Logging of Boreholes

During logging, each probe is connected to a steel armored wireline cable containing typically from 1 to 7 electrical conducting wires. The cable is physically wound on a mechanical drawworks and each probe is lowered or raised slowly in the borehole from a boom or sheave suspended above the borehole. The data is recorded directly to a computer acquisition device connected to the upper end of the electrical conductors. Power is supplied to the probes through the conductors, and a digitized signal is transmitted back to the recording device. Most logs are generated by lowering the probe to the bottom and logging up, with the exception of the temperature log, which is typically logged going down the hole to generate the best results by going thru a relatively undisturbed fluid column. Logging rates are generally between 4 and 25 feet per minute, with slower rates for the acoustic televiewer, moderate to slow rates for the temperature curve, and moderate to faster rates for the caliper probe. EM flowmeter data is recorded while stationary in the borehole at depths selected by the logger and/or site representative. The following logs were collected for each borehole:

1.1 Acoustic Televiewer (ATV)

The Century Geophysical 9804 acoustic televiewer creates images by transmitting and receiving an ultrasonic acoustic pulse reflected from the walls of the borehole. In-situ rock conditions can be viewed when evaluating the rock mass for joint locations, joint spacing and condition of the joints. The televiewer allows viewing of the borehole walls in areas of poor rock core recovery or in zones of weak and/or fractured rock. The borehole televiewers allow proper repositioning of the recovered core pieces or core sections where recovery was low and intervals have been lost. The amplitude of the reflected acoustic pulse represents the properties of the bedrock formation. Lighter colored features are generated from the higher amplitude waves and represent a sound and smooth borehole. Reflected energy that is lost in voids, fractures and discontinuities produces dark bands on the amplitude log. The ATV requires the borehole to be filled with fluid but can be performed in murky conditions or holes filled with drilling slurry.

The acoustic televiewer excels at creating images of the fractures, joints, bedding planes and other structural features of the bedrock formation. Fractures or other planar features that intersect the borehole wall will appear as sinusoidal waves in the televiewer image. The dip direction of the feature can be determined by the orientation of the low side of the sinusoidal wave. Televiewers orient their images utilizing a three-axis magnetometer and three-component accelerometer allowing accurate orientation recording of the images from inclined or vertical boreholes. The three-dimensional image of the borehole wall is displayed in two dimensions by “unwrapping” the image along a common point, typically the north side of a borehole. The probes are centered in the borehole with centralizing bands in two locations along the probe. Structural features are picked manually from the televiewer logs

searching for the sinusoidal forms. Each feature detected is rated based on type of feature (fracture, bedding, etc.) and apparent aperture (thickness of opening measured in tenths of an inch) then its apparent orientation is depicted on the log by displaying a matching sinusoid superimposed on the borehole image. The feature information is then processed using the borehole deviation measurements to generate a true dip dataset. The true dip data is displayed as a tadpole style structure log and on an equal area polar projection diagram.

The polar projection diagram is used to summarize the structural orientation information contained in the true dip dataset. It can be easier to identify structural features and relations from the projection plot than from the structure log columns. A polar projection plot displays each pair of orientation data (i.e., dip and dip direction) as a single point in the projection plane. The distance from the center of the projection plane represents the dip angle, the azimuth position on the circle shows the dip direction.

1.2 Fluid Temperature/Conductivity/Natural Gamma

Temperature logs are the recorded temperature of the surrounding air or water with respect to depth. Temperature logs can indicate where water is entering or leaving a borehole. Abrupt changes in the slope of the temperature curve can be used to locate and monitor zones of interest. During a temperature survey, data accuracy is ensured by maintaining a downward logging speed of approximately 8 to 10 feet per minute. This provides an adequate time buffer to allow sensors to respond to minor temperature changes. The fluid conductivity log provides borehole fluid electrolytic measurements. Water with lower dissolved solids concentrations will yield much lower fluid conductivity values than a liquid containing a relatively high amount of dissolved solids. Fluid conductivity curves often deflect where water producing apertures or formations are transmitting water into or out of the well with a contrasting composition relative to the borehole fluid. The fluid conductivity log is usually collected simultaneously with the temperature log.

Gamma logs are one of the most widely used geophysical logs. They are used primarily to identify changes in lithology and the relative amounts of original clay material in various sedimentary units and transformed metamorphic units. The gamma log provides a record of the total natural gamma radiation detected within a given energy range. The most significant naturally occurring, gamma-emitting radioisotopes are potassium-40 and the daughter products of the uranium and thorium decay series. If gamma-emitting artificial radioisotopes have been introduced by humans into the groundwater system, they will also produce part of the radiation measured. A Century 8144 probe was used in this investigation to acquire these three data sets.

1.3 Single Point Resistance

Single point resistance systems measure the resistance in ohms between an electrode in the borehole and one buried at the surface. Conductive minerals and surface conduction on clay particles can

contribute to current flow in some rocks. Current flow is also affected by the amount of water and its dissolved constituents in the flow pattern. As a result, the effective porosity of a formation and the interstitial fluid salinity have the greatest effect on resistance. The interpretation of resistance logs is generally straightforward. A sand unit or sandstone usually gives a relatively high ohmic response while clay and shale units will have a much lower ohmic value. Crystalline and metamorphic rocks react similarly, with the more quartzitic rocks having higher resistance, tight formations have a high resistance and fractured zones with interstitial fluids or weathered rock with clay typically have a lower resistance. A Century 8144 probe was used in this investigation for the single point resistance log.

1.4 3-Arm Caliper

Caliper measurements are simply the average diameter of the borehole at a given depth. The caliper tool collects and transmits data as the tool is lifted upwards in the borehole. Three spring-loaded arms, acting in conjunction with each other, measure the average diameter of the borehole. The caliper tool is used to locate fractures, determine casing intervals and measure the overall diameter of the drilled hole. Caliper logs are collected by calibrating the down-hole tool with a measuring template, lowering the tool to the desired depth, remotely opening the feeler arms, and then logging the open borehole and casing diameter in an upward direction. A Century 9064 probe was used in this investigation for the caliper log.

1.5 EM Flowmeter

The model 9721 EM Flowmeter tool is used in the environmental and hydrology industries to measure fluid movement in a borehole. The instrument measures flow rates using the principal of Faraday's Law of Induction. The downhole probe consists of an electromagnet and two electrodes located 180 degrees apart and 90 degrees to the magnetic field inside of a hollow cylinder. The voltage induced by a conductor moving at right angles through the magnetic field is directly proportional to the velocity of the conductor (water) through the field. The tool is capable of measuring low velocity flow rates down to 50 ml/min (0.01 GPM) and increased flow rates up to 40 liters/min (10.57 GPM), through the tool's 1-inch inside diameter sensor. When using the tool to measure low velocity flow rates a rubber skirt is attached to the outside of the sensor to block off the bore hole and force the fluid to pass through the 1-inch diameter opening inside the sensor coil. The electromagnetic flowmeter log is lowered to the bottom of each hole and raised to various stationery flow stations to record the flow at that station. Flow stations were selected based on the televiewer log and caliper fracture locations and the temperature and fluid conductivity results. Typically flow stations were taken above and below a zone of interest to see change in flow at various locations in the boring.

2 Composite Geophysical Log Summaries

2.1 Site: Colonial Pipeline, Huntersville, NC.

Note for all logs: Datum for Geophysical logs is Ground Level, and all footage references are the measured depth below ground level in each hole. Structural features with tabulated dip angle and dip direction of fractures and other features, graphical vertical logs of the ATV data, EM flowmeter data, and composite logs were submitted in December of 2020.

2.1.1 MW-7D

> Water Level was 26.75 feet on 12/11/2020 when logged; Base of casing was set at 78.3 feet in this hole. The bottom of the logged interval is 167.98 feet.

> A very small water flow up the hole was measured (on the order of 0.01 GPM), from essentially the bottom of the hole up to near base of casing.

> The caliper log indicates a smooth borehole with little variation aside from the larger fracture apertures.

> The interval from 122 feet to 128 feet has indications of potential water movement indicated by 3 temperature spikes associated with a major open fracture at 124.6 feet. The fracture has an aperture of 2.97 inches a high angle dip of 74.97 degrees with a dip direction azimuth of 40.64 degrees and is one of only 3 fractures with an orientation in the northeast quadrant.

> ATV/Stereonet data shows fractures have a dip direction loosely trending west.

2.1.2 MW-25D

> Water Level was 44.5 feet on 12/11/2020 when logged; Base of casing was set at 74.5 feet in this hole. Bottom of the logged interval is 137.39 feet.

> A very small water flow up the hole was measured (on the order of 0.02 - 0.03 GPM), grading from 0.03 at the bottom flow station at 131.0 feet to effectively 0.0 GPM at 115.0 feet and back to 0.03 GPM up hole at 68 feet.

> The caliper log indicates a smooth borehole with little variation.

> There were no indications of water movement based on Temperature logs.

> ATV/Stereonet data shows 8 high angle fractures from 45 to 79 degrees dip angle. Of the high angle fractures, a group of 5 have a dip direction azimuth between 16 and 45 degrees. The remaining 3 high angle fractures are oriented between 287 – 341 degrees.

2.1.3 MW-36D

> Water Level was 22.2 feet on 12/10/2020 when logged; Base of casing was set at 79.1 feet in this hole. The bottom of the logged interval is 138.42 feet.

> Effectively zero flow was measured from the bottom to 110.0 feet. A very slight up hole flow of 0.3 GPM was measured at 100.0 feet decreasing to 0.14 GPM at 85.0 feet.

> The caliper log indicates a relatively smooth borehole with a slight decrease in diameter and slight increase in rugosity from 115.7 feet to bottom.

> The interval from 110.0 feet to 124.0 feet has indications of potential water movement indicated by 3 temperature spikes associated with the top of an alternating light and dark zone on the acoustic televiewer log that spans most of the interval. This interval contains only 1 fracture at 115.45 feet with a very slight aperture, a 12.86 degree dip angle, and dip direction azimuth of 302.74 degrees. This zone is also outlined by a decrease in single point resistivity.

> ATV/Stereonet data shows 8 high angle fractures between 66 and 77 degrees dip angle with a dip direction azimuth between 60 and 80 degrees. All other fractures have a dip of less than 15 degrees. The interval below 124.0 feet to the bottom of the borehole contains all but 4 of the 21 fractures indicated on the ATV log including all of the high angle fractures.

2.1.4 MW-57D

> Water Level was 8.8 feet on 12/11/2020 when logged; Base of casing was set at 94.9 feet in this hole. The bottom of the logged interval is 79.73 feet.

> A very small water flow down the hole was measured (on the order of 0.01 GPM), from essentially the bottom of the hole up to near base of casing. Due to the shallow hole depth and depth of casing, only 2 EM flowmeter stations were recorded in the open hole interval.

> The caliper log indicates a smooth borehole.

> ATV image shows a broken zone from the base of casing at 94.9 feet to 96.9 feet with 1 major fracture at 95.8 feet with an aperture of 1.96 inches, 20.01 degree dip angle, and dip direction azimuth of 197.8 degrees. Temperature spikes in this zone suggest water movement.

> ATV/Stereonet data shows 6 total features. 1 high angle fracture at 101.11 feet with a 64.03 degree dip angle and a dip direction azimuth of 41.3 degrees. All other fractures have a dip of less than 45 degrees. The feature at 103.88 feet is not classified as a fracture. It delineates a sharp contact between an upper zone of relatively high ATV amplitude (indicating tight rock mass) from a lower zone of low ATV amplitude (indicating soft, weak or fractured rock mass).

2.1.5 MW-59D

> Water Level was 43.1 feet on 12/10/2020 when logged; Base of casing was set at 70.0 feet in this hole. The bottom of the logged interval is 160.79 feet.

> Effectively zero flow was measured in this hole.

> The caliper log indicates a smooth borehole.

> Temperature spikes at approximately 110 feet and 151 feet could indicate water movement but do not correlate with any other log responses.

> ATV/Stereonet data shows the following fracture groups:

- 5 high angle fractures between 82 and 86 degree dip angle with dip direction azimuth between 68 and 89 degrees.
- 5 high angle fractures between 73 and 76 degree dip angle with dip direction azimuth between 13 and 43 degrees.
- 2 high angle fractures with 47.3 and 75.09 degree dip angles and dip direction azimuth of 354.6 and 359.7 degrees respectively.
- 2 high angle fractures with 62.93 and 65.97 degree dip angles and dip direction azimuth of 143.0 and 139.3 degrees respectively.

2.1.6 MW-61D

> Water Level was 50.7 feet on 12/11/2020 when logged; Base of casing was set at 77.5 feet in this hole. The bottom of the logged interval is 112.47 feet.

> A very small water flow down the hole was measured (on the order of 0.02 GPM) at 118.0. The rest of the open hole interval measured essentially zero flow.

> The caliper log indicates a variable and rough borehole. Major increases in borehole diameter are measured at 81 – 83 feet, 85-86 feet, and again at 99 -103.

> The interval from casing to 102.5 feet appears to be soft and has a fracture zone at 87.5 – 89 feet. Temperature spikes at 82.5, 89.5, and 91.4 feet suggest water movement. A sharp deflection in resistivity at 98.0 - 103.0 feet is also present.

> ATV/Stereonet data shows. 1 high angle fracture at 90.79 feet with a 62.11 degree dip angle and a dip direction azimuth of 143.66 degrees. 6 fractures have a dip of less than 26.0 degrees. 2 features are not classified as fractures. They delineate a sharp contact between zones of relatively high ATV amplitude (indicating tight rock mass) from zones of low ATV amplitude (indicating soft, weak or fractured rock mass).

2.1.7 Walker WSW

> Water Level was 28.7 feet on 12/10/2020 when logged; Base of casing was set at 48.1 feet in this hole. The bottom of the logged interval is 178.36 feet.

> Low Up hole flow rates were measured in this hole. Increasing from bottom to top.

- 0.03 GPM at 170 feet.

- 0.05 – 0.06 GPM from 150 feet to 70 feet.
- 0.08 GPM near base of casing

> The caliper log indicates a relatively smooth borehole with increased diameter at corresponding fracture aperture.

> Several temperature spikes from 105 feet to 111 feet indicate formation water movement and correlate with ATV fracture data.

> There are 5 major fractures with large aperture from the base of casing to 74 feet. The fractures have varying dip angle and orientation.

> The rock mass is fractured from 81.0 feet to 142.0 feet 35 of 40 fracture features are identified in this interval

> ATV/Stereonet data shows the following fracture groups:

> 10 fractures with variable dip angle have a dip direction azimuth between 270 and 330 degrees.

> 13 fractures with variable dip angle have a dip direction azimuth between 60 and 110 degrees.

1 Geophysical Logging of Boreholes

During logging, each probe is connected to a steel armored wireline cable containing typically from 1 to 7 electrical conducting wires. The cable is physically wound on a mechanical drawworks and each probe is lowered or raised slowly in the borehole from a boom or sheave suspended above the borehole. The data is recorded directly to a computer acquisition device connected to the upper end of the electrical conductors. Power is supplied to the probes through the conductors, and a digitized signal is transmitted back to the recording device. Most logs are generated by lowering the probe to the bottom and logging up, with the exception of the temperature log, which is typically logged going down the hole to generate the best results by going thru a relatively undisturbed fluid column. Logging rates are generally between 4 and 25 feet per minute, with slower rates for the acoustic televiewer, moderate to slow rates for the temperature curve, and moderate to faster rates for the caliper probe. EM flowmeter data is recorded while stationary in the borehole at depths selected by the logger and/or site representative. The following logs were collected for each borehole:

1.1 Acoustic Televiewer (ATV)

The Century Geophysical 9804 acoustic televiewer creates images by transmitting and receiving an ultrasonic acoustic pulse reflected from the walls of the borehole. In-situ rock conditions can be viewed when evaluating the rock mass for joint locations, joint spacing and condition of the joints. The televiewer allows viewing of the borehole walls in areas of poor rock core recovery or in zones of weak and/or fractured rock. The borehole televiewers allow proper repositioning of the recovered core pieces or core sections where recovery was low and intervals have been lost. The amplitude of the reflected acoustic pulse represents the properties of the bedrock formation. Lighter colored features are generated from the higher amplitude waves and represent a sound and smooth borehole. Reflected energy that is lost in voids, fractures and discontinuities produces dark bands on the amplitude log. The ATV requires the borehole to be filled with fluid but can be performed in murky conditions or holes filled with drilling slurry.

The acoustic televiewer excels at creating images of the fractures, joints, bedding planes and other structural features of the bedrock formation. Fractures or other planar features that intersect the borehole wall will appear as sinusoidal waves in the televiewer image. The dip direction of the feature can be determined by the orientation of the low side of the sinusoidal wave. Televiewers orient their images utilizing a three-axis magnetometer and three-component accelerometer allowing accurate orientation recording of the images from inclined or vertical boreholes. The three-dimensional image of the borehole wall is displayed in two dimensions by “unwrapping” the image along a common point, typically the north side of a borehole. The probes are centered in the borehole with

centralizing bands in two locations along the probe. Structural features are picked manually from the televiewer logs searching for the sinusoidal forms. Each feature detected is rated based on type of feature (fracture, bedding, etc.) and apparent aperture (thickness of opening measured in tenths of an inch) then its apparent orientation is depicted on the log by displaying a matching sinusoid superimposed on the borehole image. The feature information is then processed using the borehole deviation measurements to generate a true dip dataset. The true dip data is displayed as a tadpole style structure log and on an equal area polar projection diagram.

The polar projection diagram is used to summarize the structural orientation information contained in the true dip dataset. It can be easier to identify structural features and relations from the projection plot than from the structure log columns. A polar projection plot displays each pair of orientation data (i.e., dip and dip direction) as a single point in the projection plane. The distance from the center of the projection plane represents the dip angle, the azimuth position on the circle shows the dip direction.

1.2 Fluid Temperature/Conductivity/Natural Gamma

Temperature logs are the recorded temperature of the surrounding air or water with respect to depth. Temperature logs can indicate where water is entering or leaving a borehole. Abrupt changes in the slope of the temperature curve can be used to locate and monitor zones of interest. During a temperature survey, data accuracy is ensured by maintaining a downward logging speed of approximately 8 to 10 feet per minute. This provides an adequate time buffer to allow sensors to respond to minor temperature changes. The fluid conductivity log provides borehole fluid electrolytic measurements. Water with lower dissolved solids concentrations will yield much lower fluid conductivity values than a liquid containing a relatively high amount of dissolved solids. Fluid conductivity curves often deflect where water producing apertures or formations are transmitting water into or out of the well with a contrasting composition relative to the borehole fluid. The fluid conductivity log is usually collected simultaneously with the temperature log.

Gamma logs are one of the most widely used geophysical logs. They are used primarily to identify changes in lithology and the relative amounts of original clay material in various sedimentary units and transformed metamorphic units. The gamma log provides a record of the total natural gamma radiation detected within a given energy range. The most significant naturally occurring, gamma-emitting radioisotopes are potassium-40 and the daughter products of the uranium and thorium decay series. If gamma-emitting artificial radioisotopes have been introduced by humans into the groundwater system, they will also produce part of the radiation measured. A Century 8144 probe was used in this investigation to acquire these three data sets.

1.3 Single Point Resistance

Single point resistance systems measure the resistance in ohms between an electrode in the borehole and one buried at the surface. Conductive minerals and surface conduction on clay particles can contribute to current flow in some rocks. Current flow is also affected by the amount of water and its dissolved constituents in the flow pattern. As a result, the effective porosity of a formation and the interstitial fluid salinity have the greatest effect on resistance. The interpretation of resistance logs is generally straightforward. A sand unit or sandstone usually gives a relatively high ohmic response while clay and shale units will have a much lower ohmic value. Crystalline and metamorphic rocks react similarly, with the more quartzitic rocks having higher resistance, tight formations have a high resistance and fractured zones with interstitial fluids or weathered rock with clay typically have a lower resistance. A Century 8144 probe was used in this investigation for the single point resistance log.

1.4 3-Arm Caliper

Caliper measurements are simply the average diameter of the borehole at a given depth. The caliper tool collects and transmits data as the tool is lifted upwards in the borehole. Three spring-loaded arms, acting in conjunction with each other, measure the average diameter of the borehole. The caliper tool is used to locate fractures, determine casing intervals and measure the overall diameter of the drilled hole. Caliper logs are collected by calibrating the down-hole tool with a measuring template, lowering the tool to the desired depth, remotely opening the feeler arms, and then logging the open borehole and casing diameter in an upward direction. A Century 9064 probe was used in this investigation for the caliper log.

1.5 EM Flowmeter

The Mount Sopris Instruments model HFP-2293 Heat Pulse Flowmeter tool is used in the environmental and hydrology industries to measure fluid movement in a borehole. The instrument measures flow rates by measuring the amount of time it takes a heated mass of borehole fluid to move through a known cross sectional area and reach a sensor at a known distance. The downhole probe consists of a heating grid and two thermistors located 2 centimeters above and below the heating grid. The tool is capable of measuring low velocity flow rates down to 113 ml/min (0.03 GPM) and increased flow rates up to 3.875 liters/min (1.00 GPM). When using the tool a rubber skirt is attached to the outside of the sensor to block off the bore hole and force the fluid to pass through the opening containing the heat grid and thermistors. The heat pulse flowmeter is lowered to the bottom of each hole and raised to various stationery flow stations to record the flow at that station. Flow stations were selected based on the televiewer log and caliper fracture locations and the

temperature and fluid conductivity results. Typically flow stations were taken above and below a zone of interest to see change in flow at various locations in the boring.

2 Composite Geophysical Log Summaries

2.1 Site: Colonial Pipeline, Huntersville, NC.

Note for all logs: Datum for Geophysical logs is Ground Level, and all footage references are the measured depth below ground level in each hole. Structural features with tabulated dip angle and dip direction of fractures and other features, graphical vertical logs of the ATV data, EM flowmeter data, and composite logs were submitted in July of 2021. Initial logging was conducted on 6/21-22/2021 Flowmeter logging was conducted on 7/06/2021.

2.1.1 MW-16D

> Water Level was 44.7 feet on 6/21/2020 when logged; Base of casing was set at 75.4 feet in this hole. The bottom of the logged interval is 150.15 feet.

> Negligible water flow in the hole was measured (less than 0.03 GPM), from essentially the bottom of the hole up to near base of casing with the exception of the flow station at 114.0 feet with a very slight down hole flow reading of 0.04 GPM.

> The caliper log indicates a smooth borehole with little variation.

> The interval from 105.0 feet to 119.0 feet has indications of potential water movement indicated by the flow reading of 0.04 GPM at 114.0 feet, 2 temperature spikes and a darker, potentially more weathered zone at 110.0 – 112.0 feet.

> No major open fractures were indicated on the ATV or Caliper logs. The interval from 82.0 feet to 88.0 feet contained 2 minor fractures with a sinusoidal signature and 2 broken zones that could not be oriented. This interval also shows a temperature spike in between the fractured zones possibly indicating water movement.

> ATV/Stereonet data shows 12 fractures. The following summary is grouped by dip direction.

- 3 – dip angle 53 – 66, dip direction 77 – 89 degrees
- 3 – dip angle 59 – 75, dip direction 269 – 277 degrees
- 3 – dip angle 40 – 64, dip direction 109 – 121 degrees
- 3 – dip angle 309 – 355, dip direction 33 – 41 degrees

2.1.2 MW-31D

> Water Level was 22.5 feet on 06/21/2021 when logged; Base of casing was set at 55.5 feet in this hole. Bottom of the logged interval is 73.39 feet.

> Negligible water flow was measured (less than 0.03 GPM).

> The caliper log indicates a smooth borehole with the exception of a large, open fracture at 61 feet.

> Temperature/Resistivity logs indicate potential water movement in the interval below 62 feet.

> ATV/Stereonet data shows only 4 fractures.

- 1 Major open fracture at 56.75 feet with an aperture of 2.12 Inches and a low dip angle (<5 degrees).
- 1 Major open fracture at 61.30 feet with an aperture of 8.45 inches and a low dip angle (< 5degrees).
- 2 other minor high angle fractures with dip angles above 65 degrees.

2.1.3 MW-36D(R)

> Water Level was 21.3 feet on 06/21/2021 when logged; Base of casing was set at 85.5 feet in this hole. The bottom of the logged interval is 139.10 feet.

> Negligible flow was measured at all but two flow stations. A very slight down hole flow of 0.04 GPM was measured at 114.0 feet and a very slight downhole flow of 0.03 GPM was measured at 136.0 feet.

> The caliper log indicates a relatively smooth borehole with little variation.

> There are several intervals indicated on the ATV log that contain vertical fractures. Vertical fractures and broken zones are not assigned a dip angle or dip direction value.

- The Interval from 110.0 to 120.0 feet contains several vertical fractures and voids and is associated with a decrease in resistivity and small temperature spike at 117.1 feet.
- The interval from 130.0 feet to the bottom of the hole contains several vertical fractures and is associated with a decrease in resistivity.

> ATV/Stereonet data shows 7 total features

- 6 high angle fractures all between 67 and 79 degrees dip angle with a dip direction azimuth between 134 and 164 degrees.
- 1 other high angle fracture has a dip angle of 70.7 degrees and a dip direction azimuth of 220.8 degrees.

2.1.4 MW-81D

> Water Level was 45.9 feet on 06/21/2021 when logged; Base of casing was set at 55.8 feet in this hole. The bottom of the logged interval is 113.87 feet.

> A very slight water flow down the hole was measured (0.04 GPM) at 61.0 feet and is associated with a temperature spike at 58.6 feet.

> The caliper log indicates a smooth borehole.

> ATV image shows a relatively homogeneous rock mass. Only one zone from 101.0 feet to 103.0 feet shows a slight darkening of the image below a major fracture.

> ATV/Stereonet data shows 6 total features.

- 2 major open fractures at 63.1 and 101.3 feet have low dip angle and apertures of 1.69 inches and 2.59 inches, respectively. Each major fracture is associated with a decrease in resistivity.
- The remaining fractures are minor, at various orientations, and have no other correlated data from other logs.

2.1.5 MW-90D

> LNAPL was present in this hole. The top of LNAPL is not indicated, the base of LNAPL was 47.4 feet when logged on 06/22/2021; Base of casing was set at 34.4 feet in this hole. The bottom of the logged interval is 83.16 feet.

> A very slight up hole flow at 70.0 feet (-0.03 GPM) was measured and is likely associated with the Major fractures at 71.9 and 74.1. A temperature spike at 68.4 also indicates potential flow in this zone.

> The caliper log indicates a smooth borehole with few zones of increased rugosity and a major fracture at 71.9 feet.

> Lightening of the ATV image and the sharp jump in conductivity indicate the LNAPL-water interface at 47.4 feet. The increase in acoustic velocity as the ATV passes into the denser water results in the ATV image lightening. Inconsistent resistivity responses below this interface most likely indicate interference caused by residue from passing thru the LNAPL.

> ATV/Stereonet data shows 7 total fractures and one undifferentiated zone just below casing:

- 3 high angle fractures between 59 and 62 degrees dip angle with dip direction azimuth between 81 and 100 degrees.
- 2 major open fractures at 71.96 feet and 74.12 feet with an aperture of 11.28 inches and 3.07 inches respectively. Both have low dip angle.
- 1 major open fracture at 50.12 feet with an aperture of 1.93 inches and a low dip angle.

2.1.6 MW-91D

> LNAPL was present in this hole. The top of LNAPL is not indicated, the base of LNAPL was 42.9 feet when logged on 06/22/2021; Base of casing was set at 40.7 feet in this hole. The bottom of the logged interval is 91.56 feet.

> A very slight downhole flow was measured at 44.0 feet and another very slight downhole flow was measured at 76.0 feet. Other stations are negligible.

> The caliper log indicates a smooth borehole with little variation.

> Lightening of the ATV image and the sharp jump in conductivity indicate the LNAPL-water interface at 42.9 feet. The increase in acoustic velocity as the ATV passes into the denser water results in the ATV image lightening. Inconsistent resistivity responses below this interface most likely indicate interference caused by residue from passing thru the LNAPL.

> ATV/Stereonet data shows 14 total features.

- 2 undifferentiated broken/weathered zones at 49.41 feet and 74.44 feet. Each zone has a corresponding decrease in resistivity.
- 2 major open fractures at 50.56 feet and 77.58 feet with apertures of 2.14 inches and 1.96 inches respectively, and low dip angle.
- 5 minor and partially open fractures have a dip direction between 356 degrees and 16 degrees with dip angle ranging from 45 degrees to 76 degrees.
- The remaining fractures are minor, at various orientations, and have no other correlated data from other logs.

1 Geophysical Logging of Boreholes

During logging, each probe is connected to a steel armored wireline cable containing typically from 1 to 7 electrical conducting wires. The cable is physically wound on a mechanical drawworks and each probe is lowered or raised slowly in the borehole from a boom or sheave suspended above the borehole. The data is recorded directly to a computer acquisition device connected to the upper end of the electrical conductors. Power is supplied to the probes through the conductors, and a digitized signal is transmitted back to the recording device. Most logs are generated by lowering the probe to the bottom and logging up, with the exception of the temperature log, which is typically logged going down the hole to generate the best results by going through a relatively undisturbed fluid column. Logging rates are generally between 4 and 25 feet per minute, with slower rates for the acoustic televiewer, moderate to slow rates for the temperature curve, and moderate to faster rates for the caliper probe. EM flowmeter data is recorded while stationary in the borehole at depths selected by the logger and/or site representative. The following logs were collected for each borehole:

1.1 Acoustic Televiewer (ATV)

The Century Geophysical 9804 acoustic televiewer creates images by transmitting and receiving an ultrasonic acoustic pulse reflected from the walls of the borehole. In-situ rock conditions can be viewed when evaluating the rock mass for joint locations, joint spacing and condition of the joints. The televiewer allows viewing of the borehole walls in areas of poor rock core recovery or in zones of weak and/or fractured rock. The borehole televiewers allow proper repositioning of the recovered core pieces or core sections where recovery was low, and intervals have been lost. The amplitude of the reflected acoustic pulse represents the properties of the bedrock formation. Lighter colored features are generated from the higher amplitude waves and represent a sound and smooth borehole. Reflected energy that is lost in voids, fractures and discontinuities produces dark bands on the amplitude log. The ATV requires the borehole to be filled with fluid but can be performed in murky conditions or holes filled with drilling slurry.

The acoustic televiewer excels at creating images of the fractures, joints, bedding planes and other structural features of the bedrock formation. Fractures or other planar features that intersect the borehole wall will appear as sinusoidal waves in the televiewer image. The dip direction of the feature can be determined by the orientation of the low side of the sinusoidal wave. Televiewers orient their images utilizing a three-axis magnetometer and three-component accelerometer allowing accurate orientation recording of the images from inclined or vertical boreholes. The three-dimensional image of the borehole wall is displayed in two dimensions by “unwrapping” the image along a common point, typically the north side of a borehole. The probes are centered in the borehole with centralizing bands in two locations along the probe. Structural features are picked manually from the

televiewer logs searching for the sinusoidal forms. Each feature detected is rated based on type of feature (fracture, bedding, etc.) and apparent aperture (thickness of opening measured in tenths of an inch) then its apparent orientation is depicted on the log by displaying a matching sinusoid superimposed on the borehole image. The feature information is then processed using the borehole deviation measurements to generate a true dip dataset. The true dip data is displayed as a tadpole style structure log and on an equal area polar projection diagram.

The polar projection diagram is used to summarize the structural orientation information contained in the true dip dataset. It can be easier to identify structural features and relations from the projection plot than from the structure log columns. A polar projection plot displays each pair of orientation data (i.e., dip and dip direction) as a single point in the projection plane. The distance from the center of the projection plane represents the dip angle, the azimuth position on the circle shows the dip direction.

1.2 Fluid Temperature/Conductivity/Natural Gamma

Temperature logs are the recorded temperature of the surrounding air or water with respect to depth. Temperature logs can indicate where water is entering or leaving a borehole. Abrupt changes in the slope of the temperature curve can be used to locate and monitor zones of interest. During a temperature survey, data accuracy is ensured by maintaining a downward logging speed of approximately 8 to 10 feet per minute. This provides an adequate time buffer to allow sensors to respond to minor temperature changes. The fluid conductivity log provides borehole fluid electrolytic measurements. Water with lower dissolved solids concentrations will yield much lower fluid conductivity values than a liquid containing a relatively high number of dissolved solids. Fluid conductivity curves often deflect where water producing apertures or formations are transmitting water into or out of the well with a contrasting composition relative to the borehole fluid. The fluid conductivity log is usually collected simultaneously with the temperature log.

Gamma logs are one of the most widely used geophysical logs. They are used primarily to identify changes in lithology and the relative amounts of original clay material in various sedimentary units and transformed metamorphic units. The gamma log provides a record of the total natural gamma radiation detected within a given energy range. The most significant naturally occurring, gamma-emitting radioisotopes are potassium-40 and the daughter products of the uranium and thorium decay series. If gamma-emitting artificial radioisotopes have been introduced by humans into the groundwater system, they will also produce part of the radiation measured. A Century 8144 probe was used in this investigation to acquire these three data sets.

1.3 Single Point Resistance

Single point resistance systems measure the resistance in ohms between an electrode in the borehole and one buried at the surface. Conductive minerals and surface conduction on clay particles can contribute to current flow in some rocks. Current flow is also affected by the amount of water and its dissolved constituents in the flow pattern. As a result, the effective porosity of a formation and the interstitial fluid salinity have the greatest effect on resistance. The interpretation of resistance logs is generally straightforward. A sand unit or sandstone usually gives a relatively high ohmic response while clay and shale units will have a much lower ohmic value. Crystalline and metamorphic rocks react similarly, with the more quartzitic rocks having higher resistance, tight formations have a high resistance and fractured zones with interstitial fluids or weathered rock with clay typically have a lower resistance. A Century 8144 probe was used in this investigation for the single point resistance log.

1.4 3-Arm Caliper

Caliper measurements are simply the average diameter of the borehole at a given depth. The caliper tool collects and transmits data as the tool is lifted upwards in the borehole. Three spring-loaded arms, acting in conjunction with each other, measure the average diameter of the borehole. The caliper tool is used to locate fractures, determine casing intervals, and measure the overall diameter of the drilled hole. Caliper logs are collected by calibrating the down-hole tool with a measuring template, lowering the tool to the desired depth, remotely opening the feeler arms, and then logging the open borehole and casing diameter in an upward direction. A Century 9064 probe was used in this investigation for the caliper log.

1.5 EM Flowmeter

The model 9721 EM Flowmeter tool is used in the environmental and hydrology industries to measure fluid movement in a borehole. The instrument measures flow rates using the principal of Faraday's Law of Induction. The downhole probe consists of an electromagnet and two electrodes located 180 degrees apart and 90 degrees to the magnetic field inside of a hollow cylinder. The voltage induced by a conductor moving at right angles through the magnetic field is directly proportional to the velocity of the conductor (water) through the field. The tool is capable of measuring low velocity flow rates down to 50 ml/min (0.01 GPM) and increased flow rates up to 40 liters/min (10.57 GPM), through the tool's 1-inch inside diameter sensor. When using the tool to measure low velocity flow rates a rubber skirt is attached to the outside of the sensor to block off the bore hole and force the fluid to pass through the 1-inch diameter opening inside the sensor coil. The electromagnetic flowmeter log is lowered to the bottom of each hole and raised to various stationery flow stations to record the flow at that station. Flow stations were selected based on the televiewer log and caliper fracture locations

and the temperature and fluid conductivity results. Typically flow stations were taken above and below a zone of interest to see change in flow at various locations in the boring.

2 Composite Geophysical Log Summaries

2.1 Site: Colonial Pipeline, Huntersville, NC.

Note for all logs: Datum for Geophysical logs is Ground Level, and all footage references are the measured depth below ground level in each hole. Structural features with tabulated dip angle and dip direction of fractures and other features, graphical vertical logs of the ATV data, EM flowmeter data, and composite logs were submitted in October 2021. Logging was conducted on September 14 and 21 and October 08 and 11, 2021.

2.1.1 MW-89D

> Water Level was 43.6 feet on 9/14/2021 when logged; base of casing was set at 68.4 feet in this hole. The bottom of the logged interval is 140.3 feet.

> Very slight up hole flow was measured at all flow stations.

> The caliper log indicates a smooth borehole with little variation and no large open fractures.

> The interval from 96.0 feet to 105.0 feet has indications of potential water flow. This is indicated by flow readings of 0.02 GPM at 96.0 and 105.0 feet and by several temperature spikes present in the interval.

> ATV/Stereonet data shows 14 fractures. The following summary is grouped by dip direction.

- 6 – dip angle 59 – 77, dip direction 0 – 60 degrees
- 3 – dip angle 62 – 70, dip direction 245 – 273 degrees
- 5 – low dip angle <10 degrees

2.1.2 MW-90DD

> This hole was logged on 9/14/2021 and again on 10/11/2021 due to low water level.

> Water Level was 159.8 feet on 09/14/2021 and 76.8 feet when re-logged on 10/11/2021; base of casing was set at 119.1 feet in this hole. Bottom of the logged interval is 193.3 feet.

> Very slight up hole flow was measured at 2 flow stations on 9/14/2021. Slight downhole flow was measured at all stations on 10/11/2021. Rain prior to the 10/11/2021 log could explain the downhole flow.

> The caliper log indicates a smooth borehole. An uncased portion of the larger diameter top hole can be seen directly below the bottom of casing.

> Temperature/Resistivity logs do not indicate any definitive areas of inflow.

> ATV/Stereonet data from the 10/11/2021 log shows 18 fractures. Fractures are fairly evenly distributed in dip direction with slightly higher dip angles to the south.

2.1.3 MW-91DD

> Water Level was 195.8 feet on 09/21/2021 when logged; base of casing was set at 120.0 feet in this hole. The bottom of the logged interval is 199.8 feet.

> Due to low water level minimal data was acquired.

> A downhole video was recorded on 10/11/2021. The video showed no significant inflow. Fractures recorded on the video were tight and partially to completely filled.

> Negligible flow was measured at a single flow station.

> The caliper log indicates a relatively smooth borehole with little variation.

> ATV/Stereonet data shows 1 feature at 196.9 feet. A tight fracture with a dip angle of 79.80 degrees and dip direction of 224.76 degrees and was verified on the downhole video.

2.1.4 MW-97D

> Water Level was 23.1 feet on 10/8/2021 when logged; base of casing was set at 88.7 feet in this hole. The bottom of the logged interval is 133.3 feet.

> Negligible flow was measured at each flow station.

> The caliper log indicates a smooth borehole.

> ATV and Temperature/Resistivity logs indicate a flow interval at 123.0 – 127.0 feet. Decreased resistivity along with a group of minor and large fractures are present. The temperature log also spikes just above this interval.

> A large fracture at 115.8 feet exhibits decreased resistivity, potentially indicating an area of flow. No other supporting data is present on the other logs.

> ATV/Stereonet data shows 16 fractures. The following summary is grouped by dip direction.

- 7 – dip angle 39 – 75, dip direction 255 – 279 degrees

- 2 – dip angle 77– 83, dip direction 167 – 182 degrees
- 3 – dip angle 38 – 40, dip direction 327 – 357 degrees
- 4 – low dip angle <12 degrees

2.1.5 MW-04D

> Water Level was 30.2 feet on 10/8/2021 when logged; base of casing was set at 89.3 feet in this hole. The bottom of the logged interval is 143.9 feet.

> Negligible flow was measured at each flow station.

> The caliper log indicates a smooth borehole.

> ATV and Temperature/Resistivity logs indicate several potential flow intervals corresponding to zones of decreased resistivity coupled with groups of fractures.

> ATV and Temperature/Resistivity data indicate several potential flow intervals. Zones of decreased resistivity coupled with groups of fractures occur at the intervals below.

- 99.0 – 103.0 feet. Decreased resistivity coupled with 3 minor fractures and a vertical feature.
- 106.0 – 111.0 feet. Decreased resistivity coupled with a mixed fracture group and vertical feature. Bound by darker zones potentially indicating increased weathering.
- 1140.0 feet to bottom. Alternating zones of decreased resistivity and fracture groups. A temperature spike at 127.0 feet corresponds to a fractured zone from 121.0 – 129.0 feet.

> ATV/Stereonet data shows 22 fractures. The following summary is grouped by dip direction.

- 5 – dip angle 65 – 75, dip direction 33 – 57 degrees
- 4 – dip angle 41– 81, dip direction 82 – 111 degrees
- 3 – dip angle 40 – 72, dip direction 149 – 179 degrees
- 4 – dip angle 34 – 63, dip direction 273 – 286 degrees
- 4 – dip angle 59 – 77, dip direction 329 – 359 degrees
- 2 - low dip angle <10 degrees

Sincerely,

MARSHALL MILLER & ASSOCIATES, INC.

					FISH INGESTION	O	O	O	O
				VADOSE ZONE SOIL	DERMAL CONTACT	O	O	X	O
					INCIDENTAL INGESTION	O	O	X	O

Notes:

X – Complete

O – Incomplete/Not Applicable

1 = No release related COCs are present in water supply wells

2 = No release related COCs in surface water

3 = A vapor mitigation system has been installed for the on-site resident to eliminate the vapor exposure pathway.

Definition of Terms:

COC – Constituents of concern

Vadose Zone Soil – Subsurface soil below the construction interval

An exposure pathway is the link between a contaminant source and a receptor and must include a known source, migration/transport from the source,and a route of exposure to a receptor population.

A complete exposure pathway is one in which the contaminant can be traced or expected to travel from the source to a receptor that can be affected by that contaminant. Incomplete pathways are missing at least one part of the exposure pathway and the pathway is deemed to have no exposure or risk.

Notes:

PCW = Petroleum Contact Water

Due to rounding variances inherent in using separate data management platforms, daily transfer of data between separate data management platforms resulted in calculated cumulative volume variances. Any rounding variances were minimal and were rectified beginning March 29, 2022.

Notes:

All units reported in micrograms per liter (µg/L)

Only detected constituents are shown

NA - Not Applicable

"<" - Indicates compound was not detected above laboratory reporting limit

VOCs - Volatile Organic Compounds analyzed by Method SM 6200B

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit

Bold values indicate compound was detected above laboratory reporting limit

Samples beginning with "DUP" are field duplicates and co-samples of the preceeding row

ID - Identification
