# Weatherization Grantee Health and Safety Plan Optional Template

## ☑ POLICY SUBMITTED WITH PLAN

#### **1.0 – GENERAL INFORMATION**

Grantees are encouraged to enter additional information here that does not fit neatly in one of the other sections of this document.

### 2.0 – BUDGETING

Grantees are encouraged to budget Health & Safety (H&S) costs as a separate category and, thereby, exclude such costs from the average cost per unit cost (ACPU) limitation. This separate category also allows these costs to be isolated from energy efficiency costs in program evaluations. Grantees are reminded that, if H&S costs are budgeted and reported under the program operations category rather than the H&S category, the related H&S costs must be included in the calculation of the ACPU and cost-justified through the approved energy audit.

Select which option is used below.

Separate Health and Safety Budget 🗹

Contained in Program Operations □

## **3.0 – HEALTH AND SAFETY EXPENDITURE LIMITS**

Pursuant to <u>10 CFR 440.16(h)</u>, Grantees must set H&S expenditure limits for their Program, providing justification by explaining the basis for setting these limits and providing related historical experience.

Low percentages should include a statement of what other funding is being used to support H&S costs, while larger percentages will require greater justification and relevant historical support. It is possible that these limits may vary depending upon conditions found in different geographical areas. These limits must be expressed as a percentage of the ACPU. For example, if the ACPU is \$5,000, then an average expenditure of \$750 per dwelling would equal 15 percent expenditures for H&S.

15 percent is not a limit on H&S expenditures but exceeding this amount will require ample justification. These funds are to be expended by the Program in direct weatherization activities. While required as a percentage of the ACPU, if budgeted separately, the H&S costs are not calculated into the per-house limitation. DOE strongly encourages using the table below in developing justification for the requested H&S budget amount. Each H&S measure the Grantee anticipates addressing with H&S funds should be listed along with an associated cost for each measure, and by using historical data the estimated frequency that each measure is installed over the total production for the year.

It is also recommended reviewing recent budget requests, versus expenditures to see if previous budget estimates have been accurate. The resulting "Total Average H&S Cost per Unit" multiplied by the Grantee's production estimate in the Annual File <u>should</u> correlate to the H&S budget amount listed in the Grantee's state plan.

Should a Grantee request to have more than 15 percent of Program Operations used for health and safety purposes, DOE will conduct a secondary level of review. DOE strongly encourages use of this H&S template and matrix to help expedite this process.

## Health & Safety Meaures

Health and Safety Measures					
Total Average H&S Cost Per Unit	\$	2,002.23			
Estimated Production (Annual File: IV.2 WAP Production Schedule)		6,298			
Estimated Total BIL Allocation		89,776,045			
Estimated Program Operations Budget	\$	50,440,112			
H&S Budget (Total Average H&S Cost Per Unit * Estimated Production)	\$	12,610,029			
H&S Percentage Per Unit (H&S Budget / Program Operations)		<u>25%</u>			
H&S Percentage of Total BIL Allocation (H&S Budget / Total BIL Allocation)		<u>14%</u>			

#### 4.0 – INCIDENTAL REPAIR MEASURES

If Grantees choose to identify any H&S measures as incidental repair measures (IRMs), they must be implemented as such under the Grantee's weatherization program in all cases – meaning, they can never be applied to the H&S budget category. In order to be considered IRMs, the measure must fit the following definition and be cost justified along with the associated efficiency measure;

Incidental Repairs means those repairs necessary for the effective performance or preservation of weatherization materials. Such repairs include, but are not limited to, framing or repairing windows and doors which could not otherwise be caulked or weather-stripped and providing protective materials, such as paint, used to seal materials installed under this program. (<u>10 CFR 440 "Definitions"</u>)

Incidental repairs are those repairs necessary for the effective performance or preservation of weatherization materials. Such repairs include, but are not limited to, framing or repairing windows and doors which could not otherwise be caulked or weather-stripped, and providing protective materials, such as paint used to seal materials or vapor barriers used to protect floor insulation installed under WAP. Except where explicitly cited in the *Installation Standards*, dwellings that require incidental repairs must have a site-specific computerized audit to ensure that the package of measures do not reduce the overall SIR to less than 1.0. Incidental repairs must be included in the SIR calculation. If the projected incidental repairs drop the SIR below 1.0 and there are no other non-federal funds to leverage, the dwelling must be deferred. The following repairs must be cost justified through a properly executed computerized audit:

- A) Replacing deteriorated window or doors (for non-cost justified reasons)
- B) Repairing minor roof leaks
- C) Minor floor reinforcement
- D) Minor ceiling reinforcement

n

E) Backing for wall insulation for an exterior closet (not knee walls)

#### 5.0 – DEFERRAL/REFERRAL POLICY

Deferral of services may be necessary if H&S issues cannot be adequately addressed according to WPN 17-07 guidance. The decision to defer work in a dwelling is difficult but necessary in some cases. This does not mean that assistance will never be available, but that work must be postponed until the problems can be resolved and/or alternative sources of help are found. If, in the judgment of the auditor, any conditions exist which may endanger the health and/or safety of the workers or occupants, the unit should be deferred until the conditions are corrected. Deferral may also be necessary where occupants are uncooperative, abusive, or threatening. Grantees must be specific in their approach and provide the process for clients to be notified in writing of the deferral and what conditions must be met for weatherization to continue. Grantees must also provide a process for the client to appeal the deferral decision to a higher level in the organization.

Grantee has developed a comprehensive written deferral/referral policy that covers both H&S, and other deferral reasons?

	Yes 🗹 No 🗖
	Where can this deferral/referral policy be accessed?
Su	bgrantees are required to have a deferral policy on file. Conditions requiring that a dwelling to be placed on deferral status shall include, but shall
not be lin	nited to:
A)	The dwelling has been condemned or major dwelling mechanical systems have been "red tagged" by local or state code enforcement officials or
	utility providers and the system cannot be addressed with Health & Safety funds.
B)	The dwelling structure or its mechanical systems, including electrical and plumbing, are in such a state of disrepair that failure is imminent and
	the conditions cannot be resolved cost-effectively.
C)	The primary heating system at the dwelling is nonfunctioning or is functioning improperly and is deemed unsafe and must be replaced, or major
	repairs are needed and there are insufficient resources available.
D)	Dangerous conditions exist due to high CO levels in combustion appliances which cannot be resolved within weatherization program guidelines.
E)	Moisture problems are so severe they cannot be resolved within program guidelines.
F)	Unsanitary conditions are present in the dwelling that may endanger the health and safety of dwelling occupants or weatherization personnel
	should weatherization work be performed.
G)	Household members report documented health conditions that prohibit the installation of insulation and other weatherization materials.
H)	Household members, guests, or pets maintained at the dwelling are uncooperative, abusive, or threatening to weatherization staff or contractors.

I) The extent and condition of lead-based paint or similar hazards in the dwelling may potentially create health and safety risks if weatherization work is performed.

J) Illegal activities are being conducted in the dwelling unit.

### 6.0 – HAZARD IDENTIFICATION AND NOTIFICATION FORM(S)

Documentation forms must be developed that include at a minimum: the client's name and address, dates of the audit/assessment and when the client was informed of a potential H&S issue, a clear description of the problem, a statement indicating if, or when weatherization could continue, and the client(s) signature(s) indicating that they understand and have been informed of their rights and options.

Documentation Form(s)	have been develo	ned and comply with
Documentation i orm(s)	nave been develo	ped and comply with

-			
guidance?		Yes 🗹	No

Client is informed of potential H&S issues at initial audit. Auditor gives

H&S pamphlets and clients signs stating receipt and understanding.

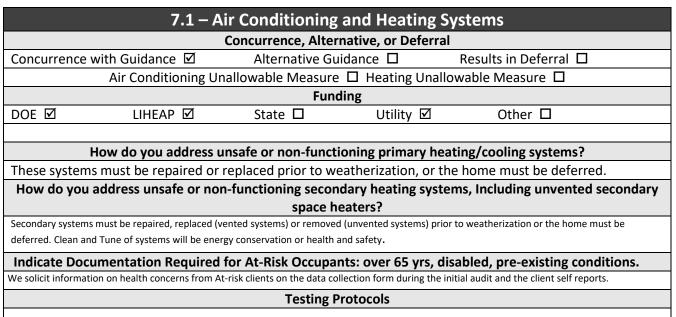

#### 7.0 – HEALTH AND SAFETY CATEGORIES

For each of the following H&S categories identified by DOE:

Explain whether you concur with existing guidance from WPN 17-07 and how that guidance will be implemented in your Program, if you are proposing an alternative action/allowability, or if the identified category will not be addressed and will always result in deferral. Alternatives must be comprehensively explained and meet the intent of DOE guidance.

- Where an Action/Allowability or Testing is "required" or "not allowed" through WPN 17-07, Grantees must concur, or choose to defer all units where the specific category is encountered.
- "Allowable" items under WPN 17-07 leave room for Grantees to determine if the category, or testing, will be addressed and in what circumstances.
- Declare whether DOE funds or alternate funding source(s) will be used to address the particular category.
- Describe the explicit methods to remedy the specific category.
- Describe what testing protocols (if any) will be used.
- Define minimum thresholds that determine minor and major repairs
- Identify minimum documentation requirements for at-risk occupants
- Discuss what explicit steps will be taken to educate the client, if any, on the specific category if this is not explained elsewhere in the Plan. Some categories, like mold and moisture, require client education.
- Discuss how training and certification requirements will be provided for the specific category. Some categories, like Lead Based Paint, require training.
- Describe how occupant health and safety concerns and conditions will be solicited and documented

Grantees may include additional H&S categories for their particular Programs. Additional categories must include, at a minimum, all of the same data fields as the DOE-provided categories. Two additional tables have been created to utilize.

ECTs performed by HVAC professional as warranted, which means they evaluate system to determine if unit can be cleaned and tuned for continued use or not. If the system cannot be cleaned and tuned for continued use due to age and/or condition and repairs exceed 1/3 of replacement costs, the unit will be replaced without a clean tune. The clean and tune is completed after proper evaluation within the approved Energy Audit Tool. Prior to replacement, attempt to cost justify as an ECM is completed via Energy Audit Page 4 | 15

Client Education			
Client Education document contains information on heating and cooling systems.			
Training			
Subgrantee Auditors are trained in diagnostic testing and visual inspection of HVAC systems.			
7.2 - Asbestos - All			
What is the blower door testing policy when suspected Asbestos Containing Material (ACM) is identified?			
Where hazardous materials such as asbestos or vermiculite insulation exist that may be circulated, blower			
door diagnostics shall not be performed.			
7.2a – Asbestos - in siding, walls, ceilings, etc.

Concurrence with Guidance ☑ Alternative Guidance □ Results in Deferral □					
Funding					
DOE 🗆	LIHEAP 🗖	State 🗖	Utility 🗹	Other 🗹	

What guidance do you provide Subgrantees for dealing with structural issues (e.g., roofing, wall, foundation) in homes slated for weatherization?

Only very minor structural issues are allowable, otherwise dwelling is deferred - problem(s) are corrected using other funding.

How do you define "minor" or allowable structure and roofing repairs, and at what point are repairs considered beyond the scope of weatherization?

Only repairs under 10 square feet are allowable as an incidental repair and must be cost justified with a computer audit. Larger repairs require deferral until corrections are made with other funding.

If priority lists are used, and these repairs are designated as Incidental Repairs, at what point is a sitespecific audit required?

See above.	
------------	--

#### **Client Education**

Contained in client education document; clients are notified if these conditions exist.

Training

Auditors are trained to identify structural issues at the initial audit.

7.7 – Code Compliance

How do you verify safe work practices? What is your policy for in-progress monitoring?					
OSHA confined space, fall protection, and safety data sheets were designed by NC WAP and					
are required as part of weatherization. NC WAP will also review at least one "in-progress" dwelling					
at each dwelling annually. Subgrantees are required to have regular documented safety meetings.					
Training and Certification Requirements					
OSHA 10 required for crew leaders. OSHA 30 allowable for field staff but, not required.
