COASTAL  
COMMUNITIES  
PROGRAM**

**BEAUFORT  
COUNTY**  
North Carolina

# RESILIENCE STRATEGY

BEAUFORT COUNTY

SPRING 2022

## INTRODUCTION

The [Resilient Coastal Communities Program \(RCCP\)](#) is funded through the North Carolina General Assembly and the National Fish and Wildlife Foundation and administered by the North Carolina Department of Environmental Quality – Division of Coastal Management. The RCCP is a component of the statewide North Carolina Resilient Communities Program, called for in the [North Carolina Climate Risk Assessment and Resilience Plan](#).

The RCCP was established with the objectives of providing financial grants and technical assistance to support a proactive, locally driven, and equitable approach to coastal resilience planning and project implementation. The RCCP provides a phased framework to assess coastal risks and vulnerabilities, engage community stakeholders, and develop projects to strategically improve the resiliency of communities and their natural and built infrastructure. The RCCP consists of four phases:

- Phase 1 – Community Engagement/Risk and Vulnerability Assessment
- Phase 2 – Planning, Project Identification and Prioritization
- Phase 3 – Engineering and Design
- Phase 4 – Implementation

In Spring 2021, Beaufort County was selected to participate in the first two phases of the RCCP. The first two phases of the RCCP were completed in Spring 2022 with the development of this Resiliency Strategy document, the main deliverable of the program’s initial phases. This Resiliency Strategy consists of a combination of all the Phase 1 and 2 deliverables/materials including those for the defining of the community vision and goals, the Community Action Team Report, the Stakeholder Engagement Strategy, the inventory of existing local and regional plans, the Risk and Vulnerability Assessment Report, and the project profile portfolios. This plan provides a framework to:

- Document the resiliency planning process and outcomes and provide a clarity of purpose
- Identify opportunities for short-term and long-term resiliency actions based on community input
- Set project priorities for Phase 3 – Engineering and Design
- Identify and attract potential funding opportunities to facilitate a ‘direct path’ to project implementation

## VISION & GOALS

A resiliency strategy vision, goals, and objectives were developed to guide the planning process. Existing relevant plans were summarized for the Community Action Team (CAT). Vision statements and goals from each of the local and regional plans were reviewed. Example goals from resiliency plans outside the area were also reviewed. Example vision statements, goals, and themes were identified following review of existing plans. These examples were used to guide the CAT's brainstorming process during the first CAT meeting.

The team was encouraged to consider the triple bottom line approach to resiliency, including environmental, economic, and social factors. Worksheets were provided to CAT members for use in identifying draft vision statements, goals, and objectives. The team worked together during the first CAT meeting to complete the worksheets. Team members also had an opportunity to complete the worksheets following the CAT meeting.

Input from the CAT was used to finalize the resilience vision, goals, and objectives listed below.

## RESILIENCE VISION

Beaufort County exemplifies a culture of resilience to coastal hazards through inclusive partnerships focusing on both effective response and recovery, and pro-active measures to prevent or minimize future damage. The county is quickly able to rebound from all hazard events, thereby supporting thriving, healthy communities that offer opportunities for all residents.

## RESILIENCE GOALS & OBJECTIVES

### **Economic**

**GOAL 1: Protect and maintain critical infrastructure and ensure that critical infrastructure is resilient to all anticipated hazards.**

*Objectives:*

- Identify key community assets that will need increased protection (both physically and fiscally) from the major weather events and incremental climate change impacts we will face in the next 20-50 years.
- Protect, maintain, and enhance critical infrastructure.
- Reduce power outages for residents and businesses.
- Promote research and development of utility hardening.
- Create redundancy in the water service network.

**GOAL 2: Improve and maintain buildings to support resilience to hazards.**

*Objectives:*

- Incentivize the construction of "flood resistant" homes.

- Elevate homes in flood prone areas.
- Floodproof businesses and other non-residential buildings in flood prone areas.
- Promote research and development of building construction and design standards that can better withstand storm damage.
- Promote energy efficiency and solar panels for homes and businesses.

**GOAL 3: Support smart growth with future development.***Objectives:*

- Provide guidance on how future development can minimize additional damages and recovery costs from hazard events.
- Discourage development in areas at high-risk for flooding or storm damage.
- Encourage the demolition of disused and dilapidated impermeable surfaces and buildings.
- Implement mitigation activities that will assist in protecting lives and property.
- Recognize that low level nuisance flooding and tidal flooding are going to become increasingly regular, and that infrastructure needs to be built or retrofitted in preparation of these events.
- Plan for sea level rise in coastal areas.

**GOAL 4: Foster and sustain a strong economic base that recovers quickly following a hazard event.***Objectives:*

- Strive for a sustainable economic base that allows all residents equal access to good jobs and meaningful education.
- Promote agriculture, tourism/ecotourism, and manufacturing.
- Support industries in achieving natural hazard resilience and in recovery efforts when events occur.
- Identify economic development opportunities that are best suited for the area.

**GOAL 5: Identify and obtain funding to support hazard resilience.***Objectives:*

- Develop a list of resilience projects with funding pathways.
- Identify funding and grant opportunities to implement resilience projects.
- Identify funding to reduce repetitive losses from previous hazard events, such as funding for building elevation/floodproofing and equitable buyouts.

**Environmental****GOAL 6: Protect and enhance the natural habitats of fish and wildlife.***Objectives:*

- Provide guidance on sustainable growth practices that respect the natural functions of the regional ecosystem and allow for their natural adaptation as the ecosystem undergoes relatively rapid change in coming decades. (See NC Wildlife's Green Growth Toolbox as a resource.)

- Incentivize reliance on “natural” protective systems as much as possible (i.e., leaving wetlands, forests and marshes as intact as possible to absorb floodwaters and mitigate storm surge).
- Discourage the excessive covering of land with impervious surfaces.

**GOAL 7: Improve water quality.**

- Improve water quality of the Tar River, Pamlico River, Pungo River and their tributaries.
- Protect riparian buffers and encourage intensive development away from riparian buffers.
- Support the Tar-Pamlico Nutrient Management Strategy.
- Partner with the local council of governments, environmental non-profits such as Sound Rivers, and local universities to plan, develop, and implement water quality projects.

**GOAL 8: Improve stormwater management.***Objectives:*

- Ensure that the elevating of roadways and houses does not create inadvertent “dikes” that result in flooding of unanticipated areas.
- Maintain and improve the capacity of existing stormwater management systems.
- Remove excess debris from streams to improve capacity.
- Prevent future debris from accumulating in streams.
- Improve construction and site design standards to reduce debris caused by flooding and storms.
- Encourage the construction of permeable surfaces to reduce flash flooding.

**Social****GOAL 9: Develop effective hazard response and recovery.***Objectives:*

- Build and/or improve early warning systems for weather events.
- Restore services quickly and efficiently following a hazard event.
- Minimize damage and loss of life from disasters.
- Plan how to deal with increased solid waste and storm debris disposal as natural disasters result in more home and property destruction in the future.
- Develop a Comprehensive Evacuation Plan.
- Plan for serving areas cut off by flood waters post storm events.
- Rebound quickly following a hazard event.

**GOAL 10: Protect vulnerable populations.***Objectives:*

- Provide emergency relief for those living in non-conditioned housing during extended heat events.
- Consider policy requiring manufactured home neighborhoods to have “safe spaces” constructed for residents to shelter in place during tornadic threats.

- Ensure that serving vulnerable populations is a top priority in response and recovery efforts.
- Ensure that all programs are equitable.
- Ensure that vulnerable populations are able to be evacuated in case of an emergency.
- Provide transportation services and shelters in case of an emergency.
- Ensure that vulnerable populations have the information needed to evacuate quickly and safely.
- Create awareness of the social impacts of climate change.

**GOAL 11: Educate the public about resiliency.***Objectives:*

- Educate the public, including the most vulnerable populations, with the tools needed to protect themselves from natural hazards.
- Educate the public on the natural environment, such as education on the benefits of preserving the natural functions of ecosystems and protecting sensitive lands, education on water quality and how to reduce personal impacts from non-point source pollution, local wildlife education/appreciation, etc.
- Educate the public on the health risks of mold.
- Educate the public on nature-based solutions to flooding.
- Ensure that information related to potential impacts of flooding reaches those in high flood risk communities.

**GOAL 12: Promote thriving, healthy, and resilient communities.***Objectives:*

- Promote riparian buffers as spaces for recreation, education, and enjoyment.
- Promote outdoor recreational activities for everyone, including public waterfront access.
- Ensure that all residents have access to clean water, food, healthcare, quality education, good jobs, and affordable, suitable housing.
- Preserve historic buildings and other historic resources.
- Support community improvements which improve the quality of life for all citizens.

**GOAL 13: Foster inclusive, collaborative partnerships.***Objectives:*

- Achieve a high level of resilience to all hazards through inclusive, collaborative partnerships including the public, non-profit, government, and private sectors.
- Create a culture of resilience throughout Beaufort County, recognizing all potential hazard events.
- Strengthen interjurisdictional and interagency partnerships.

## COMMUNITY ACTION TEAM REPORT

Roles to fill on the Community Action Team (CAT) were based on guidance from the Resilient Coastal Communities Program Handbook. The goal was to build a multi-disciplinary Community Action Team with expertise in planning and community development, hazard mitigation, utility management, engineering, the community's economy, engaging with vulnerable and underrepresented populations, and nature-based solutions. Community Action Team members could include municipal/county managers, planners, elected officials, utility managers, community and economic developers, business community representatives, disaster recovery coalitions/groups, councils of governments (COGs), state and federal land managers, non-governmental organizations (NGOs), and others working with the community on resilience planning.

The first CAT member identified was the County Manager. The County Manager worked with the contractors to identify CAT members to fill the roles detailed above. Potential members were contacted by phone and/or email either by the contractors or the County Manager. The need for CAT members was announced to the public at a County Board of Commissioners' meeting. Two elected officials were selected to serve from the Board of Commissioners as well. Underserved community representatives were identified by the County Manager.

The selected Community Action Team members are listed below.

### COMMUNITY ACTION TEAM MEMBERS

- Bishop James S. McIntyre Sr., Cornerstone Family Worship Center, Pastor
- Brian Alligood, Beaufort County, County Manager
- Carlton Gideon, Mid-East Commission, Planner
- Carnie Hedgepeth, Beaufort County, Emergency Management Director
- Christina Smith, Beaufort County, Public Works Director
- Dr. Dave Loope, Beaufort County Community College, President
- Ed Booth, Beaufort County, Commissioner
- Heather Deck, Sound Rivers, Executive Director
- Jill Howell, Sound Rivers, Environmental Projects Manager
- John Rebholz, Beaufort County, Commissioner
- Martyn Johnson, Beaufort County, Economic Development Director
- Sue Squires, Beaufort County, Economic Development Specialist
- Tom Stroud, NC Estuarium/Partnership for the Sounds, Deputy Director

**Refer to Appendix A for Community Action Team Materials.**

## STAKEHOLDER ENGAGEMENT STRATEGY

### Existing Conditions, Issues, and Opportunities

In fall 2021, a public survey was developed in partnership with the Community Action Team (CAT). Questions were based around resiliency to flooding and sea level rise. The survey was designed to be completed in 5 - 15 minutes depending on how much the respondent had to share. The public survey was available online and was also available in hard copy format.

The survey was advertised on the county's website and Facebook page, Sound River's website and Facebook page, and the NC Estuarium's Facebook page. Hard copies of the survey were available at all county buildings in public facing areas, and also available at the NC Estuarium. Flyers advertising the survey were hung at these locations to draw attention from visitors. Hard copies of the survey and flyers with the online survey link were also distributed to county residents in partnership with local faith based organizations.

Flyers and hard copies of the public survey were available at the November 1, 2021 Board of Commissioner's meeting. Contractors attended a Community Resource Partners meeting at Cornerstone Family Worship Center on November 10, 2021 to provide education on the county's Resilient Coastal Communities Program, and to encourage participation in the public survey. A total of 51 residents responded to the survey.

Public input from the survey was used to identify existing conditions, issues, needs, and opportunities to enhance resiliency. Information was gathered on how residents' home and business properties have been affected by flooding, flooding seen in the community, how the respondents' personal lives have been affected by flooding, and what measures they have taken to prevent or avoid flooding. This information was used to recommend strategies for flooding resilience. For example, contractors reviewed specific areas where people had noticed flooding issues in the community to recommend strategies for those areas as appropriate, and program recommendations such as public education campaigns were recommended based on survey responses.

### Draft Resiliency Actions

In spring 2022, an online storymap was created using ArcGIS Online and was posted at [BeaufortCountyResiliency.org](https://BeaufortCountyResiliency.org). The storymap reviewed Resiliency 101, Beaufort County's vision statement, CAT members, building upon previous plans, the public survey, the risk and vulnerability assessment, the top flood related hazards, the STAPLEE analysis, and draft actions, all in an interactive storymap format. There was a comment form at the end of the storymap that the participant could fill out if desired, allowing them to comment on the draft actions and other elements of Beaufort County's Resilient Coastal Communities Program. The storymap was advertised in conjunction with the public open house, detailed below.

Two public open house events were held, one in person on Feb. 17, 2022 and one virtually on Feb. 21, 2022. These events, along with the storymap at [BeaufortCountyResiliency.org](http://BeaufortCountyResiliency.org), were advertised through a press release, an article in the Washington Daily News, flyers hung at public locations in the county, on the county's Facebook page, and on the county's website.

The virtual open house utilized the storymap to engage participants. For the in-person open house, posters were displayed which duplicated the information contained in the online storymap, including the following:

- What is resiliency?
- Flooding in Beaufort County
- What does resiliency mean to you? (interactive)
- North Carolina Resilient Coastal Communities Program
- A Community Plan – Resiliency Vision, Community Action Team, Building Upon Previous Plans
- Public Survey Results
- Risk and Vulnerability – Vulnerable Community Assets and Top Flood Related Hazards
- Map – Critical Assets overlaid with Category 3 Storm Surge
- Map – Critical Assets overlaid with 1 ft. Sea Level Rise
- Projects and Priorities – Suite of Potential Solutions
- Preliminary Strategies and their Feasibility
- Action Strategy Areas
- Provide input on your top (3) preferred actions (interactive)
- Provide input on your top (1) nature-based or hybrid action (interactive)

In addition to the interactive posters, there were comment forms available at the public open house to solicit feedback on preferred projects and other aspects of the community's resiliency program. There was also a resource table with handouts on topics such as flood readiness, stormwater education, creating home rain gardens, septic maintenance, mold remediation, etc. Some of these materials were made available in Spanish. Contractors and CAT members were available to interact with the public during the in person and virtual events.

Comment forms could be submitted at the open house event and could be submitted online or by postal mail until February 25, 2022.

## ENGAGEMENT TOOLS

- Public Survey
- Webpage/Online Storymap
- Notifications (news release, social media ads, flyers)
- Public Open Houses (In-person and Virtual)

**Refer to Appendix B for Stakeholder Engagement Materials.**

## REVIEW OF EXISTING LOCAL & REGIONAL EFFORTS

To avoid the duplication of work and to build upon and remain consistent with previous resiliency efforts, existing resources/plans/policies/ordinances were reviewed, incorporated, and augmented as part of the community driven RCCP. The Pamlico Sound Hazard Mitigation Plan contains a baseline vulnerability and risk assessment and served as a reference point for conducting the RCCP Phase I and II assessment while considering additional factors and the local context.

## RELEVANT PLANS, ORDINANCES, POLICIES, AND PROGRAMS

- **Albemarle-Pamlico Comprehensive Conservation and Management Plan (CCMP) (2012)**  
*The CCMP considers and analyzes four basic questions: 1) What is a healthy Albemarle-Pamlico system, 2) What is the current condition of the system, 3) What are the most significant challenges facing the system over the next 10 years, and 4) What actions should be implemented to best achieve a healthy system?*
- **Beaufort County Economic Development FY 21-22 Work Plan (2021)**  
*The purpose of the Beaufort County Economic Development Work Plan is to provide tools, strategies, and guidance to increase economic development through collaboration, resources, knowledge, flexibility, and innovation.*
- **Beaufort County CAMA Land Use Plan (2019)**  
*The purpose of the plan is to help the county and towns to manage growth and development, ensure that new land uses are compatible with land use plans/visions, plan for the expansion of services, and protect and conserve essential coastal resources.*
- **Beaufort County Comprehensive Transportation Plan (2013)**  
*The CTP is a long-range plan which identifies major transportation improvement needs and develops long term solutions for the next 25 to 30 years. It is a joint effort between Beaufort County, City of Washington, Town of Aurora, Town of Bath, Town of Belhaven, Town of Chocowinity, Town of Pantego, Town of Washington Park, the North Carolina Department of Transportation (NCDOT), and the Mid-East Rural Planning Organization.*
- **Beaufort County Comprehensive Bicycle Plan (2020)**  
*The Beaufort County Comprehensive Bicycle Plan provides a framework for the county, municipalities, residents, developers, NCDOT and other regional planning partners to build an improved bicycle network. It provides detailed recommendations for bicycle facilities, programs, policies, and implementations to improve mobility, safety, health, the economy, the environment, and overall quality of life.*

- **Hurricane Matthew Resilient Redevelopment Plan – Beaufort County and Northeast Region Plans (2017)**

*The purpose of the plan is to provide a roadmap for community rebuilding and revitalization assistance for the communities that were damaged by the hurricane. The program empowers communities to prepare locally driven recovery plans to identify redevelopment strategies, innovative reconstruction projects, and other needed actions.*

- **Pamlico Peninsula – Building Resilient Regions Report (2016)**

*The International Economic Development Council (IEDC) contracted to assist Beaufort County and nine other Pamlico Peninsula Counties (PPCs) with developing and implementing resiliency measures. The IEDC provided specific advice on how to strengthen existing programs and develop new programs or strategies so that the county and region can be more resilient from an economic perspective to future crises.*

- **Pamlico Sound Regional Hazard Mitigation Plan (2020)**

*The HMP ensures that all possible activities are reviewed and implemented so that the problem is addressed by the most appropriate and efficient solutions. This plan provides a framework for all interested parties to work together toward mitigation. It establishes the vision and guiding principles for reducing hazard risk and proposes specific mitigation actions to eliminate or reduce identified vulnerabilities.*

## RISK AND VULNERABILITY ASSESSMENT REPORT

To assess risk and vulnerability, contractors identified critical assets within Beaufort County. These critical assets included community assets, natural infrastructure, and vulnerable populations within the communities. (See Appendix C for the list of identified critical assets.)

### MAPPING ASSETS, NATURAL INFRASTRUCTURE, AND VULNERABLE POPULATIONS

#### Community Assets

Contractors worked with the Community Action Team (CAT) at the 2<sup>nd</sup> CAT meeting to identify community assets in list format, then researched what GIS data was available. In some cases, there was already a data layer available, while in some cases, the GIS data was created by the contractors based on CAT input on which assets to include. In sources below, “data created” is used to designate data that was developed by the contractor.

#### Sources:

- Emergency Management – data created
- Law Enforcement/Security – data created
- Fire and EMS Stations – NC Office of State Fire Marshall
- Government Services – data created
- Food – data created
- Water and Wastewater – NC Department of Environmental Quality, Division of Water Resources
- Electric Power Grid – Duke Energy (Other provider data requested but not received)
- Transportation – NC Dept. of Transportation, Beaufort County, some data for local transportation assets created
- Solid waste – data created
- Medical – data created
- Schools – data created
- Libraries – data created
- Churches – data created
- Community Buildings and Facilities – data created
- Community Response Partners – Beaufort County Emergency Management
- Hazardous, Leaking Underground Storage Tanks – NC Department of Environmental Quality
- Hazardous, Toxic Release Inventory – US Environmental Protection Agency
- Hazardous, Hazardous Waste Sites – NC Department of Environmental Quality

## Natural Infrastructure

Contractors researched existing natural infrastructure data and shared an initial list with the CAT. The team helped to add additional natural assets to the list. Contractors also worked with the team to identify local public land and private land used for public recreational purposes.

### Sources:

- Wetlands – US Fish and Wildlife Service
- Working Forest Lands – NC Natural Heritage Program
- Rural Forest Landscape – NC Natural Heritage Program
- Urban Forest Landscape – NC Natural Heritage Program
- 100-year Floodplain – FEMA
- 500-year Floodplain – FEMA
- Rivers and Streams – NC Department of Environmental Quality
- High Quality Waters – NC Department of Environmental Quality
- Primary and Secondary Fishery Nursery Areas – NC Dept. of Environmental Quality
- 303(d) Listed Waters – US Environmental Protection Agency
- Parks and Public Land – data created
- Public Boat Ramps – NC Wildlife Resources Commission
- Managed Areas – NC Natural Heritage Program
- Natural Areas – NC Natural Heritage Program

## Vulnerable Populations

Maps of vulnerable populations were downloaded from the Center for Disease Control including the overall Social Vulnerability Index, Socioeconomic Status, Household Composition/Disability, Race/Ethnicity/Language, and Housing Type/Transportation. The CAT reviewed the series of vulnerable populations maps. In many instances the team felt that the Social Vulnerability Index did not align with what is seen locally. The Aurora area, in the southeastern part of the county, should have been the most vulnerable area for Socioeconomic Status. It is the most vulnerable in the county and certainly more vulnerable than Chocowinity or Washington. The Aurora area is also a food desert. Additionally, the Housing Type/Transportation map did not seem accurate. There are major transportation issues in these areas. The Census Tract level does not reflect local conditions well. The Household Composition/Disability map looked fairly accurate.

### Sources:

- Social Vulnerability Index – US Center for Disease Control

## Identifying and Mapping Hazards

The Community Action Team chose to evaluate flooding, storm surge and sea level rise as community hazards to assess risk and vulnerability within the community.

### Floodplains

The Coastal Flood Risk model, 100-year floodplain, and 500-year floodplain data from the Federal Emergency Management Agency (FEMA) were used to identify potential flooding scenarios within the community. By selecting three flooding scenarios, the contractors were able to assign each scenario a high, medium, and low threshold to evaluate vulnerability to critical assets.

#### Sources:

- North Carolina Emergency Management Floodplain Mapping program

### Storm Surge

The potential storm surge flooding data from the National Oceanic and Atmospheric Administration (NOAA) was used to identify potential storm surge scenarios within the community. The contractors also evaluated storm surge data from Hurricane Florence, which is known to be one of the most devastating storms that impacted Beaufort County in decades. This data was broken down into three scenarios; greater than 9ft, 9-3ft, and less than 3ft to evaluate storm surge vulnerability within a high, medium, and low threshold.

#### Sources:

- NOAA Hurricane Center and Central Pacific Hurricane Center – National Hurricane Center Data in GIS Formats

### Sea level rise

Sea level rise (SLR) data from the National Oceanic and Atmospheric Administration (NOAA) was used to identify and map potential 1ft, 2ft, and 3ft SLR scenarios within the community. By selecting three scenarios we were able to assign each scenario a high, medium, and low threshold to evaluate vulnerability to critical assets.

#### Sources:

- NOAA Sea Level Rise Data Download

## ASSESSING VULNERABILITY

### Vulnerability = Exposure + Sensitivity - Adaptive Capacity

**Exposure** refers to the probability of physical contact between an asset and a hazard.

**Sensitivity** is the degree to which an asset is impacted by a hazard.

**Adaptive Capacity** is the ability of an asset to change its characteristics or behavior in response to a hazard.

To assess vulnerability, contractors developed multiple vulnerability indexes which combined exposure, sensitivity, and adaptive capacity to estimate cumulative vulnerability of critical assets within four categories: Building Infrastructure, Natural Resources, Transportation Infrastructure, and Utility System Infrastructure.

Exposure and sensitivity were objective factors within the vulnerability equation.

For exposure, contractors analyzed direct effects of different coastal hazards (flooding, storm surge and sea level rise) on the community critical assets by categorizing each hazard exposure as high, medium, or low. For example, if a critical asset was exposed to a 1ft sea level rise (SLR) it would fall under the highly vulnerable category, while a 2ft. and 3 ft. SLR would indicate medium and low exposure, respectively.

For sensitivity, contractors analyzed the cumulative effects of the critical assets within each category by assigning a percent threshold or indicating a high/low need for that asset within the community. For example, high sensitivity for building infrastructure indicates that greater than 66% of the community asset building – within a certain subcategory (i.e., police stations) - were affected by the coastal hazard or that a particular building was highly sensitive to the function of the community.

Adaptive capacity was a subjective factor within our assessment that used objective data and community input to evaluate. Factors such as: Social vulnerability, feasibility of relocation, feasibility of retrofit, and possible alternatives were evaluated to give each critical asset an adaptive capacity score. Contractors relied on input from the Community Action Team to evaluate the adaptive capacity of each critical asset.

Asset	Exposure score 0-3	Sensitivity score 0-3	Adaptive Capacity 0-3	Vulnerability Score 0-6
Asset name	0 = no exposure 1 = low 2 = medium 3 = high	0 = no sensitivity 1 = low 2 = medium 3 = high	0 = no adaptive capacity 1 = low 2 = medium 3 = high	0 - 2 = Low 3 - 4 = Medium 5 - 6 = High

Critical assets were given a score based on the average exposure, sensitivity, and adaptive capacity scores. These scores were then used in the vulnerability equation to calculate cumulative vulnerability. The thresholds for each category are listed below:

### **Building Infrastructure**

- Exposure
  - High: Coastal Flood Risk (FEMA Model) / 9+ft Surge / 1ft SLR
  - Medium: 100YR floodplain / 3-9 ft Surge/ 2ft SLR
  - Low: 500 floodplains / >3ft Surge / 3ft SLR
- Sensitivity
  - High: >66%+ Facilities affected / Highly sensitive to community operations
  - Medium: 33%-66% Facilities affected / Alternative facilities available
  - Low: <33% Facilities affected / Facility not needed for community operations
- Adaptive Capacity
  - Social vulnerability index
  - Ability to relocate building infrastructure (Ex. From 25yr to 50yr floodplain)
  - The ability to raise structure
  - Accessibility to residents once moved
  - Land availability
  - Ability to Retrofit for flooding (Rise generator/sensitive components)
  - Another facility can be used in its place
  - Facility is not needed to operate

### **Natural Resources (Streams, Wetlands, Managed Areas, Natural Areas)**

- Exposure
  - High: Coastal Flood Risk (FEMA Model) / 9+ft Surge / 1ft SLR
  - Medium: 100YR floodplain / 3-9 ft Surge/ 2ft SLR
  - Low: 500 floodplains / >3ft Surge / 3ft SLR
- Sensitivity (Inundation from SLR with no ability to migrate or evolve)
  - High: 1 Ft / 25ft from structure / 50% effected
  - Med: 2 Ft / 50 ft from structure / 25%-50%
  - Low: 3+ ft / 100 ft from structure / >25%
- Adaptive Capacity
  - Restorative capacity
  - Ability to increase flood capacity
  - Alternative use capacity (Ex. Park and floodplain)

## Transportation Infrastructure

- Exposure
  - High: Coastal Flood Risk (FEMA Model) / 9+ft Surge / 1ft SLR
  - Medium: 100YR floodplain / 3-9 ft Surge/ 2ft SLR
  - Low: 500 floodplains / >3ft Surge / 3ft SLR
- Sensitivity
  - High: >50% of structures effected by natural hazards
  - Medium: 25% - 50% effected by natural hazards
  - Low: <25% effected by natural hazards
- Adaptive Capacity
  - Social vulnerability index
  - Ability to relocate transportation infrastructure (Ex. From 25yr to 50yr floodplain)
  - The ability to raise structure (Bridge)
  - Ability to retrofit the infrastructure to be more resilient to flooding

## Utility System Infrastructure (Sewer/Water/Electric/Communications)

- Exposure
  - High: Coastal Flood Risk (FEMA Model / 9+ft Surge / 1ft SLR
  - Medium: 100YR floodplain / 3-9 ft Surge / 2ft SLR
  - Low: 500Y floodplains / >3ft Surge / 3ft SLR
- Sensitivity
  - High: >50% of structures effected by natural hazards
  - Medium: 25% - 50% effected by natural hazards
  - Low: <25% effected by natural hazards
- Adaptive capacity
  - Social vulnerability index
  - Ability to relocate utility system infrastructure (Ex. From 25yr to 50yr floodplain)
  - The ability to increase capacity
  - Ability to retrofit the infrastructure to be more resilient to flooding

## ESTIMATING RISK

### Asset Values

Infrastructure assets were valued based on the total tax evaluation (structure and land). This methodology helped alleviate concerns voiced by the Community Action Team related to data used in the evaluation. Hazardous assets were also based on the total tax value of the property which acted as a mitigation proxy value. Transmission easement values were based on the property tax values of which the easement intersected. Natural and Managed areas were

valued based on the total tax value of the properties within these areas. Roads and bridges were valued based on their average replacement rates of \$5,088,824/mile and \$783,480/bridge, respectively. These values are based on the Federal Highway Administration's average replacement cost per mile of roadway and the North Carolina Department of Transportation's (NCDOT) average replacement cost per bridge. Wetlands and streams were valued based on the mitigation rate set by the NC. Division of Mitigation Services at \$67,442.06/ac. and \$603.87/ft., respectively.

### **Call to Action**

A call to action was determined based on risk value and vulnerability to the critical asset. From the evaluation of the critical action team these assets called for action:

- Beaufort County Courthouse and Jail
- Beaufort County Social Services
- Macedonia Church of Christ
- Mobile Food-Pantry Pantego
- Pungo Christian Academy
- Beaufort County Richland Water Treatment Plant
- Beaufort County Water Dept. - Public Works Dept.
- BJ's Convenience Store well (Well #1)
- Dowry Creek Marina well (Well #1)
- New Hope Church of Christ Wastewater Treatment Plant
- Town of Chocowinity System Well (Well #2A)
- Town of Chocowinity System Well (Well #3)
- Whitley's Mobile Home Park well (Well #2)
- Whitley's Mobile Home Park well (Well #1)
- Bridges
- Rail Lines
- Natural Heritage Program - Natural Areas
- Streams
- Underground Storage Tanks
- Hazardous Waste Sites

### Sources:

## PROJECT PORTFOLIO

The assembled project portfolio details 6 shovel-ready priority projects, addressing hazards, type of strategy area and approach, priority rating, potential sources of funding, cost and project duration estimates, and action items. These projects were developed to coincide with the top priority solution that would help make the community more resilient to the hazards identified: sea level rise, storm surge, riverine flooding, tidal flooding, and nuisance flooding. One nature-based or hybrid solution project is eligible to move forward into phase three of the Resilient Coastal Communities Program, Engineering and Design. Beaufort County chose to move forward by retrofitting a demonstration area that implements low impact development for education and outreach at the Beaufort County Community College. Below we show the steps taken to assemble the project portfolio that led to the communities and the Community Action Team choosing this project.

### Identify a Suite of Potential Solution

The first step to assembling the project portfolio was to identify a suite of potential solutions. The contractors helped the Community Action Team identify 42 potential solutions. The Pamlico Sound Hazard Mitigation Strategies identified an additional 27 potential solutions that could also be carried forward. These solutions were categorized by the 'related asset,' 'strategy area,' and 'strategy approach' and presented to the Community Action Team at the 4th CAT meeting. Each Community Action Team member then identified their top 10 solutions and 17 solutions moved forward to the consolidation and prioritization phase.

### Consolidate and Prioritize Projects

The second step in assembling the project portfolio was to consolidate and prioritize the project solutions. The Community Action Team identified 17 solutions from the suite of potential solution that could move forward. The contractor then used the STAPLEE Method and a simple cost/benefit rating system to help consolidate and prioritize all the potential project solutions. The STAPLEE Method takes into consideration the Social, Technical, Administration, Political, Legal, Economic, and Environmental impacts of each project solution. While the cost/benefit rating system used a high/medium/low scoring system to predict benefits and costs of each project solution. Many of the project solutions, identified by the community action team, scored well in both metrics. An additional 7 projects scored well on both metrics and 24 potential priority projects were presented to the community action team during the 5<sup>th</sup> meeting where the STAPLEE and cost/benefit rating metrics were reviewed and finalized. These projects were then brought to the community for additional feedback. Input from Beaufort County residents along with the Community Action Team identified 6 priority projects to be presented in the project portfolio.

### **Priority Projects**

- Low Impact Development Demonstration Site – Beaufort County Community College
- Living Shoreline Demonstration Site – Wrights Creek Park
- Drainage Ditches and Tributaries Maintenance Plan
