

DENR Statement on Duke's Response to NOVs

The notices of violation sent to Duke Energy on Feb. 28, 2014, required the utility to respond to the Department of Environment & Natural Resources within 30 calendar days of receipt of the notice. In Duke Energy's response received today, they provided information for our consideration in determining whether to proceed with additional enforcement action. DENR staff will make that decision after careful review of the information provided by the utility, as well as all information collected in the department's recent inspections of Duke Energy facilities statewide.
