Appendix B - EPA EJSCREEN Raw Data

1 Introduction

Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies (US EPA). This report will examine the demographic and environmental conditions in Richmond and Scotland Counties, as well as census tracts, and the 7-mile radius around the property boundary of the Enviva Pellets Hamlet, LLC facility. Finally, the demographics of the entire state of North Carolina are also considered as they relate to both the county and local census tract and radius settings.

Enviva Pellets Hamlet, LLC (Enviva) has requested a modification to their existing permit to install additional air pollution control equipment which will reduce their overall emissions profile.

Enviva was initially permitted to construct a wood pellets manufacturing plant in Richmond County, North Carolina under the authorization of North Carolina Division of Air Quality (NC DAQ) permit 10365R00 on March 29, 2016. The 2019 permit modification would allow Enviva to increase production rate from 537,625 ODT per year to 625,011 ODT per year by upgrading with a new prototype increasing the amount of softwood processed from a maximum of 75% to a maximum of 85%. Enviva has initiated onsite construction at the Hamlet plant location but has not yet completed construction activities.

Enviva's proposed modifications include installing air pollution control devices that will lower the current permitted emission rates. The reductions in permitted emissions will allow the facility to comply with a Prevention of Significant Deterioration (PSD) permit avoidance limit. The PSD avoidance limit will require the facility to remain below 250 tons per year (tpy) for each criteria pollutant. The six criteria pollutants as deemed by U.S. Environmental Protection Agency (EPA) are carbon monoxide, lead, ground level ozone, nitrogen dioxide, sulfur dioxide, and particulate matter (PM).

Enviva's emission reduction modifications will include:

- Installation of a regenerative thermal oxidizer following the currently permitted dryer wet electrostatic precipitator (WESP) for volatile organic compound (VOC), Hazardous Air Pollutants (HAP) and PM emissions control;
- Remove the Green Wood Hammermill cyclones from the permit and recirculate the exhaust to reduce VOC, HAP and PM emissions;
- Install one wet scrubber on the pellet cooler product recovery cyclones to reduce PM emissions;
- Install a regenerative catalytic oxidizer, to control combined emissions of VOC, HAP and PM from the pellet coolers and pellet mills;
- Decrease the amount of wood that can bypass the Dry Hammermills from 25% to 15%;
- Remove the hammermill area emission point (which will no longer be an emission point);
- Change the number of Pellet Loadout Bins from eight (8) to two (2);

- Remove the truck loadout station emission point - pellets will now be loaded into hopper rail cars that are entirely enclosed

2 Environmental Justice Evaluation

The North Carolina Department of Environmental Quality (NCDEQ) has assessed the permit application and the potential impact on communities surrounding the requested modified facility operation by reduced emission sources and implementation of control technology. The assessment has included:

- Permit modification application submitted by – Enviva Pellets Hamlet, LLC.
- Point Source Emission Units
- Potential Emissions from the wood pellet manufacturing plant process
- Regulatory Evaluation
- Compliance Assurance Monitoring
- Facility-Wide Air Toxics
- Modeled Emissions Rates
- Study of area demographics are determined by utilizing the EPA Environmental Justice tool (EJSCREEN) <https://ejscreen.epa.gov/mapper/> and current, available census data. <http://factfinder.census.gov/faces/nav/jsf/pages/index.xhtml>
- Comparison of area demographics to project county census data.

3 Project Proposal

3.1 Process Description

The wood pellet manufacturing process description is detailed in the application as follows (Figure 1):

- “Green” (i.e., wet) wood will be delivered to the plant via trucks as either pre-chipped wood or unchipped logs from commercial harvesting for on-site chipping. Purchased chips and bark will be unloaded from trucks to enclosed conveyors that transfer the material to green wood storage piles or to bark fuel storage piles.
- Unchipped logs will be de-barked by the electric-powered rotary drum de-barker and then sent to the chipper to chip the wood to specification for drying.
- Chipped wood used in pellet production will be further processed in the green wood hammermills to reduce material to the proper size. Enviva has applied to install three green wood hammermills and directly route the vent streams to either the inlet of the dryer furnace (which is ultimately routed to WESP/RTO control system) or directly into the WESP/RTO control system to control PM, VOC, and HAP emissions.
- Green wood will be conveyed to a single pass rotary dryer system. Direct contact heat will be provided to the system via a 250.4 million Btu per hour total heat input furnace that uses bark and wood chips as fuel. Green wood will be fed into the dryer where the moisture content will be reduced to the desired level. As part of this application, Enviva is proposing to install a natural gas-fired RTO (32 million Btu per hour) following the WESP to provide further PM, VOC, and HAP emissions control.
- Once dried, wood is reduced to the appropriate size using eight (8) dry hammermills, where particulate emissions will be controlled using bagfilters.
- Dried and processed wood then goes to the pelletizing operations, where it is mechanically compacted.

As part of the application, Enviva is proposing to purchase dry shavings to produce wood pellets in addition to green chips or logs. The use of pre-dried shavings will reduce on-site VOC and HAP emissions. The dry shavings will be unloaded from trucks into a hopper that feeds material via enclosed conveyors to a bucket elevator that ultimately fills a silo. Each of these material transfer points will be entirely enclosed except for truck unloading. From the silo, the dry shavings will then be transferred via an enclosed screw conveyor to the dry hammermills for additional processing.

Formed pellets will be discharged into pellet coolers where cooling air will be passed through the pellets, equipped with a scrubber for emission control. An aspiration system will be used to recirculate air for the pellet coolers. The exhaust from the scrubber will then be sent to a natural gas-fired RCO for control of VOC, HAP, and PM.

The final product, wood pellets, will be transferred from the pellet coolers to the rail loadout operation. At the rail loadout station, pellets will be gravity fed into closed top rail cars. Atmospheric emissions from pellet loadout will be minimal because dried wood fines will have been removed in the pellet screener, and a slight negative pressure will be maintained in the loadout building as a fire prevention measure to prevent any buildup of dust on surfaces within the building. Rail car loading will be entirely enclosed.

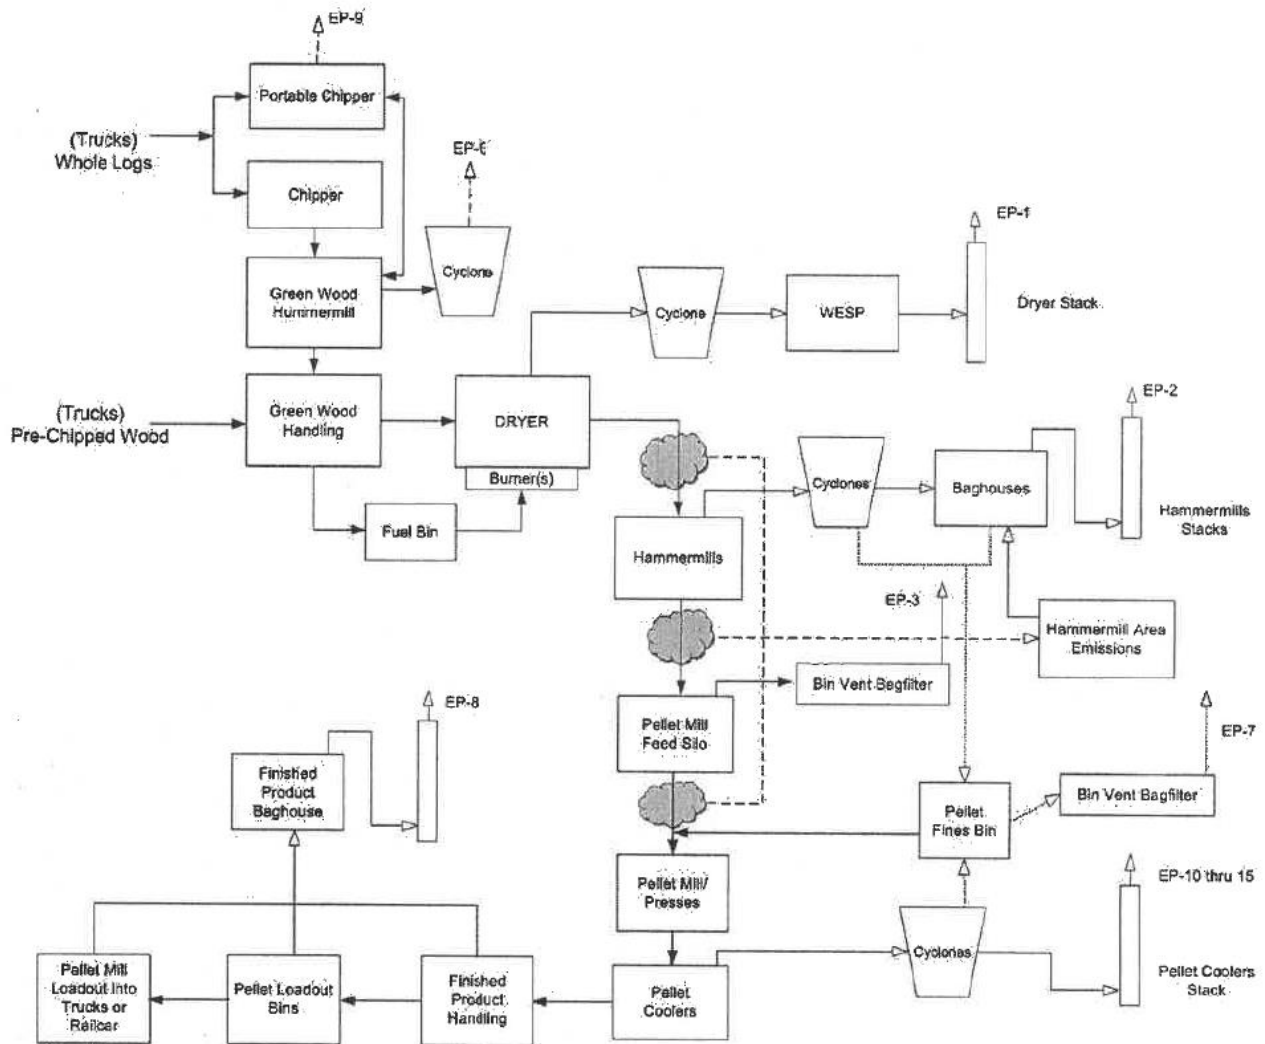

Figure 1. Process-flow diagram of pelletization operation.

4 Ambient Air Modeling

As part of the permit application process, an ambient air dispersion modeling analysis was conducted for the Enviva Hamlet facility. The modeling analysis followed all applicable guidance as recommended by 40 Code of Federal Regulations – Appendix W and the U.S. Environmental Protection Agency.

Due to the level of the emissions and initial screening measures (Class II Significance Modeling results), a full impact analysis was required, which included evaluating the impacts from the Enviva Hamlet facility as well as the contributions from other sources (facilities) of the same pollutants within a radius of approximately 38 miles (60 kilometers).

The Table 4-1 below (from Table 5-9 of the applicant’s modeling report) shows the maximum impact for each pollutant and averaging period evaluated. The maximum impact for each pollutant was obtained by combining the onsite (Enviva) and offsite (surrounding sources) impacts with a background concentration obtained from representative ambient monitoring data. Also shown is the distance to each maximum impact in miles.

Table 4-1. NAAQS Modeling Results - Initial

Pollutant	Averaging Period	Maximum Enviva & Surrounding Source Impacts (ug/m ³)	Background Concentration (ug/m ³)	Total Impact (ug/m ³)	NAAQS (ug/m ³)	% NAAQS	Distance to Maximum (miles)
PM ₁₀	24-hour	29.67	25.00	54.67	150	36	0.78
PM _{2.5}	24-hour	4.56	17.3	21.86	35	62	0.83
	annual	0.99	8.87	9.86	12	82	0.81
NO ₂	1-hour	68.91	32.10	101.01	188	54	0.74
	annual	2.37	5.30	7.67	100	8	0.75

During the initial pre-permit modeling, the Division of Air Quality (DAQ) had determined the furthest distance to the maximum impact for any of the pollutants is 0.83 miles for the PM_{2.5} 24-hour averaging period. Since the Class II Significance Model sets the PM_{2.5} Significant Impact Area at 3.0 km (or 1.86 miles), the DAQ permitting staff suggested a radius of 2 miles for EJ analysis.

After receiving comments from the public hearing on November 8, 2018, the department determined to extend the demographic radius to seven miles. Seven miles would then encompass Dobbins Heights as well as the City of Hamlet. The modeling analysis followed all applicable guidance as recommended by 40 CFR – Appendix W and the Environmental Protection Agency.

Table 4-2 below shows the NAAQS full impact analysis results evaluated in the direction of the Town of Dobbins Heights and City of Hamlet at 2, 3, 4, 5, 6, and 7 miles away from the Enviva Hamlet Facility. The results include modeled impacts and monitored background concentrations

for each pollutant and averaging period evaluated. The modeled impacts represent the combined emissions impacts from both Enviva and other surrounding facilities. Monitored background concentrations were taken from data collected at representative ambient monitoring stations. The total impacts for each pollutant and averaging period were calculated by summing Enviva and surrounding source modeled impacts with the appropriate monitored background concentrations. The total impact was compared to the NAAQS for each pollutant and averaging period and is shown in Table 4-2 as a percentage of the respective NAAQS. As shown, the total air quality impacts were below the NAAQS for each pollutant and averaging period evaluated at all distances from Enviva to Dobbins Heights and the City of Hamlet out to 7 miles.

Table 4-2. NAAQS Modeling Results Out to 7 Miles in Direction of Dobbins Heights and Hamlet

The environmental justice report discusses demographics at one-mile intervals from the Enviva property boundary as data allows.

5 Geographic Area

The facility is located at 1125 North NC Highway 177 Hamlet, NC, 28345 (Richmond County) (Figure 2).

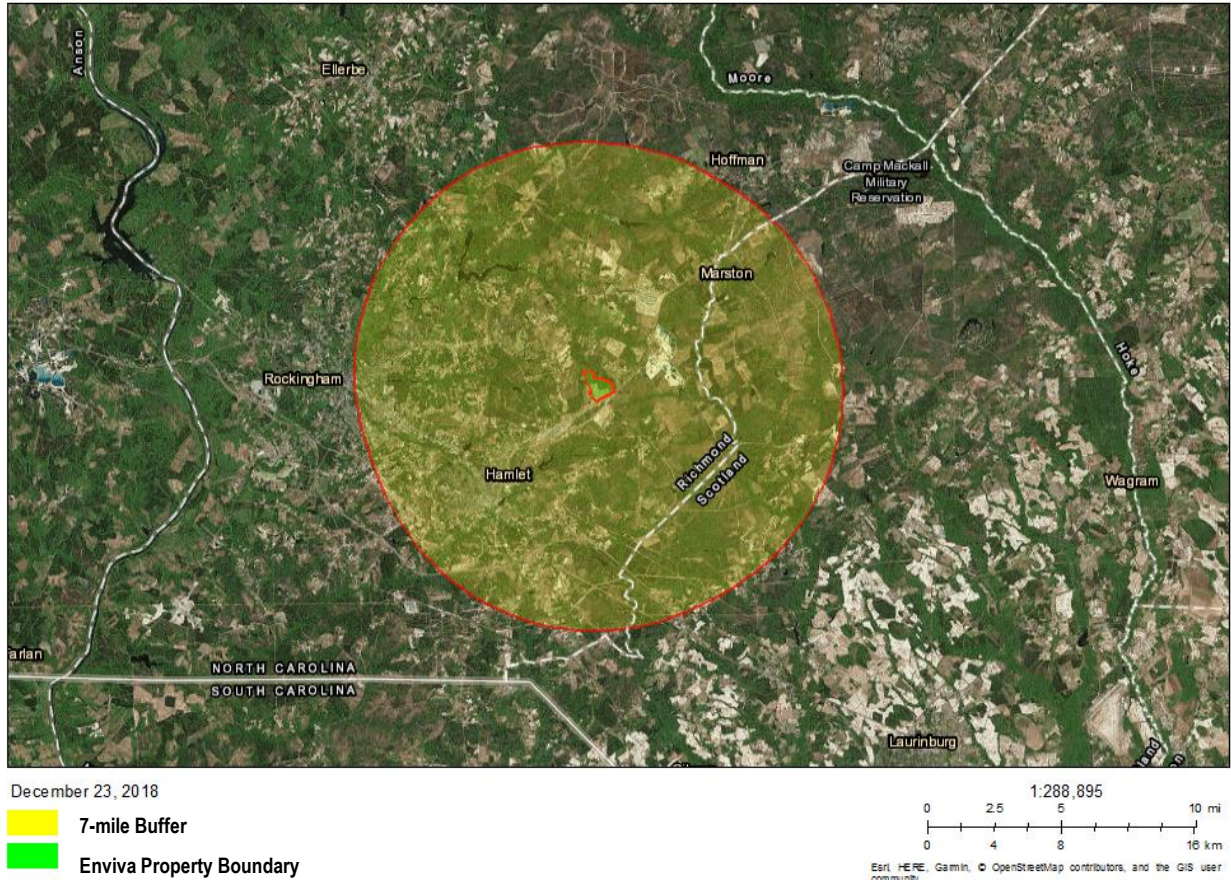

Figure 2. Facility location with 7-mile radius.

The 7-mile radius used in this analysis is predominantly within Richmond County, but crosses into Scotland County. The census tracts within Richmond County are 9701, 9702, 9703, 9704, 9705, 9706, 9707, 9709, 9710, 9711 and in Scotland County are 105 and 106 (Figure 3). Census tracts are small, relatively permanent statistical subdivisions of a county with a unique numeric code (US Census Bureau).

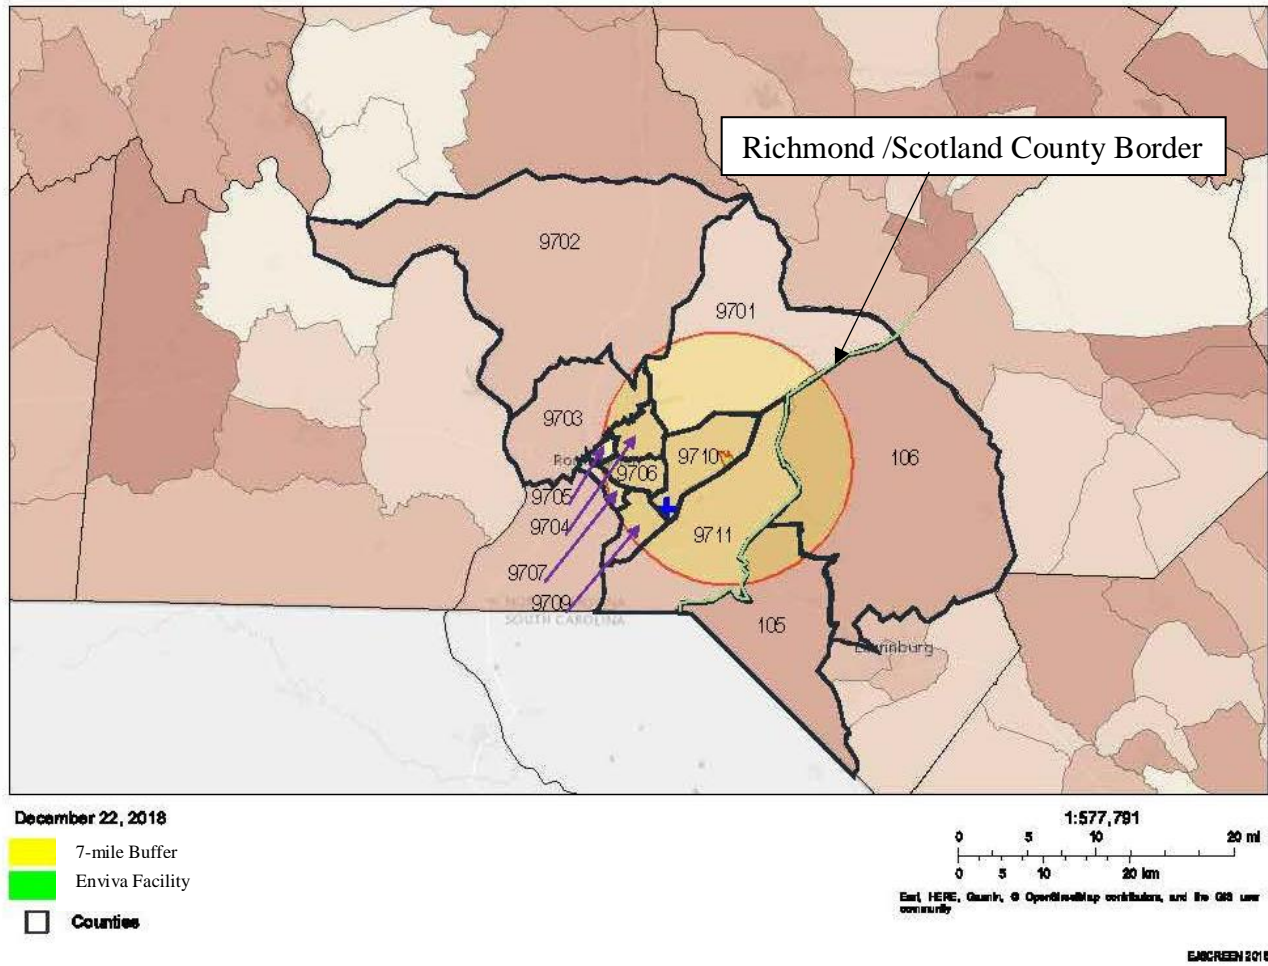

Figure 3. Census tracts and counties surrounding facility location.

6 Regional and Local Settings

The following sections on race and ethnicity, age and sex, disability, poverty, household income, and Limited English Proficiency (LEP) populations are based on US Census Bureau data, first at a state and county level (regional setting), and then at a census tract and project radius level (local setting). The surrounding census tracts included are any census tracts that overlap into the seven-mile radius. Demographics of Richmond and Scotland County will be compared to the local level data to identify any disparities surrounding the project area. Using standard environmental justice guidelines from the EPA and NEPA documentation, the following conditions will be flagged as potential communities of concern:

1. 10% or more in comparison to the county average
2. 50% or more minority
3. 5% or more in comparison to the county average for poverty

For example, if a census tract has 35% of the population low income but the county consists of 30% low income, the census tract would exceed the county average by 16.5% and thus be flagged as a potential area of concern. For this report, census data from 2010 and census data estimates from 2011-2015 and 2013-2017 were used and can be found in Appendix A. 2010 Census Bureau data is real data gathered every ten years, whereas the estimates from the more recent years are modeled estimates based on the real data. For the data gathered from the 2013-2017 and 2011-2015 estimates, the margin of error (MOE) has been included. This value is a measure of the possible variation of the estimate around the population value (US Census Bureau). The Census Bureau standard for the MOE is at the 90% confidence level and may be any number between 0 and the MOE value in either direction (indicated by +/-).

Data obtained through EJSCREEN, which is identified as the radius or buffer surrounding the facility location, has been calculated (where possible) to show in intervals. This means that instead of looking at the radius data from property boundary all the way out to seven-miles in its entirety, each mile was looked at individually. For example, the 1-2-mile radius was calculated by subtracting the 1-mile data from the 2-mile radius data, which is the product from EJSCREEN. This process was continued all the way out to the 7-mile boundary, creating intervals of 0-1-mile, 1-2-mile, 2-3-mile, 3-4-mile, 4-5-mile, 5-6 mile, and 6-7 mile. Such a method produces data that can be interpreted at a smaller level, providing for more accuracy. These one-mile interval increases produce what looks like doughnuts surrounding the location. EJSCREEN raw data is available in Appendix B.

6.1 Race and Ethnicity

6.1.1 Regional Setting

According to the 2010 US Census Data QT-P3, Race and Hispanic Origin: 2010; 2010 Census Summary File 1 report, North Carolina' population totaled 9,535,483 individuals (Table 6-1). The three most common racial groups across the state were White (68.5%), Black or African American (21.5%) and Hispanic or Latino (of any race) at 8.4%.

Richmond County had a total population of 46,639 individuals (Table 6-1). The racial groups consisting of greater than 1% of the population within the county were White (60.2%), Black or African American (30.6%), Hispanic or Latino (5.9%), Mexican¹ (4.6%), Some other Race (3.6%), American Indian or Alaska Native (2.5%), and Two or More Races (2.1%). The Black or African American population (30.6%) was greater than 10% different when compared to the state (21.5%). The American Indian or Alaska Native population (2.5%) was greater than 10% different when compared to the state (1.3%). Each other racial group (Asian, Native Hawaiian and Other Pacific Islander, Some Other Race, Two or More Races, and Hispanic or Latino) made up less than 10% when compared to North Carolina.

Scotland County had a total population of 36,157 individuals (Table 6-1). The racial groups consisting of greater than 1% of the population within the county were White (46.5%), Black or African American (38.6%), American Indian or Alaska Native (10.9%), Two or More Races (2.2%), Hispanic or Latino (2.1%), Mexican (1.2%), and Some other Race (1.1%). The Black or African American population (38.6%) was greater than 10% different when compared to the state (21.5%). The American Indian or Alaska Native population (10.9%) was also greater than 10% different when compared to the state (1.3%).

Table 6-1. Regional Setting - Race and Ethnicity

Race and Ethnicity	North Carolina		Richmond County		Scotland County	
	Number	Percent	Number	Percent	Number	Percent
Total Population	9,535,483	100	46,639	100	36,157	100
White	6,528,950	68.5	28,072	60.2	16,822	46.5
Black or African American	2,048,628	21.5	14,269	30.6	13,943	38.6

Mexican	486,960	5.1	2,163	4.6	438	1.2
Puerto Rican	71,800	0.8	130	0.3	129	0.4
Cuban	18,079	2.3	30	0.1	31	0.1
Other Hispanic or Latino	223,281	2.3	418	0.9	156	0.4
All bolded and highlighted cells indicate a difference that is greater than 10% when compared to the State. Source: US Census, 2010						

¹ Mexican is considered a sub-group of Hispanic or Latino. These subgroups are a portion of the total percentage of Hispanic or Latino of any race.

6.1.2 Local Setting - Project Area

Environmental Protection Agency's EJSCREEN was used to review a seven-mile radius from the Enviva property boundary in Richmond County. To understand any trends that may occur throughout the seven-miles, one-mile intervals will be reviewed as shown in Table 6-2. As the seven-miles overlapped into Scotland County at the three-mile radius, it will also be used to compare race and ethnicity demographic data (Appendix B).

The American Indian or Alaska Native population of 2% in mile 0-1, 2-3, 3-4, 4-5, and 6-7 was greater than 10% different from the state (1.3%). The Black or African American population of 33% in mile 2-3 and 5-6 was greater than 10% different from the state (21.5%).

The Black or African American population of 34% in mile 6-7 was greater than 10% different from Richmond County (30.6%).

The Hispanic or Latino (of any race) population for the whole seven miles (0-1 mile 4%, 1-2 mile 3%, 2-3 mile 3%, 3-4 mile 4%, 4-5 mile 4%, 5-6 mile 4%, 6-7 mile 5%) was greater than 10% different from Scotland County (2.1%). The Some Other Race population between 3-4 miles (2%), 4-5 mile (2%), 5-6 miles (2%), and 6-7 miles (3%) was greater than 10% different from Scotland County (1.1%). The Black or African American population from 3-4 miles (44%) was greater than 10% different from Scotland County (38.6%).

The Asian population from 0-1 mile (2%) was greater than 10% different from Richmond County (0.9%) and Scotland County (0.8%). The Black or African American population from 4-5 mile (38%) was greater than 10% different from Richmond County (30.6%) and Scotland County (38.6%).

The American Indian population from 1-2 mile (3%) and 6-7 mile (3%) was greater than 10% different from Richmond County (2.5%) and the State (1.3%).

The Two or More Race population between 0-1 mile (3%), 1-2 mile (3%), 2-3 mile (3%), and 3-4 mile (4%) was greater than 10% different from Richmond County (2.1%), Scotland County (2.2%), and the State (2.2%).

6.1.3 Local Setting - Census Tracts

According to the US Census Bureau Table QT-P3 Race and Hispanic or Latino Origin: 2010 the following demographics were discerned from the applicable census tracts that make up the seven-mile radius as shown in Table 6-3. Ten census tracts make up the seven-mile radius within Richmond County – 9701, 9702, 9703, 9704, 9705, 9706, 9707, 9709, 9710, and 9711. US Census Bureau data on race used for this report can be found in Appendix A. Two additional census tracts in Scotland County, 105 and 106 whose data on race can also be found in Appendix A.

Richmond County Census Tracts

The American Indian population of 2.9% within the census tract 9709 was greater than 10% different of the County (2.5%). The Asian population of 1.9%, 1.6%, and 1.8%, respectively within census tracts 9704, 9705, and 9706 was greater than 10% different of the County (0.9%). The Hispanic or Latino (of any race) population of 7.1% within census tract 9701 was greater than 10% different of the County (5.9%). The Cuban population of 0.2% within the census tract 9701 was greater than 10% different of the County (0.1%). The Puerto Rican population of 0.5% within both census tracts 9710 and 9711 was greater than 10% different of the County (0.3%). Other Hispanic or Latino populations of 1.4%, 2.2%, and 2.2%, respectively within census tracts 9701, 9705, and 9707 was greater than 10% different of the County (0.9%). The American Indian population of 1.7%, 1.6%, 2.2%, 1.7%, 1.6%, and 2.2%, respectively within census tracts 9701 through 9706 was greater than 10% different of the State (1.3%). The Black or African American population of 26.7% and 26.9% within census tracts 9702 and 9704 was greater than 10% different of the State (21.5%).

The Black or African American population of 40.8%, 41.7%, 42.7%, 52.7%, and 37.8%, respectively within census tracts 9701, 9705, 9706, 9710, and 9711 was greater than 10% different than the State (21.5%) and the County (30.6%). The American Indian population of 3.6% and 6.2% within census tracts 9707 and 9711 was greater than 10% compared to the State (1.3%) and the County (2.5%). The populations of Some Other Race (8.8%, 8.0%, and 6.7%, respectively, within census tracts 9702, 9706, and 9707) were greater than 10% different than the State (4.3%) and the County (3.6%) populations of Some Other Race. The Two or More Races population of 2.6%, 2.5%, and 6.3%, respectively within census tracts 9706, 9710, and 9711 were all greater than 10% different than the State (2.2%) and the County (2.1%). The Hispanic or Latino (of any race) population of 12.3%, 11.4%, and 11.4%, respectively within census tracts 9702, 9706, and 9707 were all greater than 10% different than the State (8.4%) and the County (5.9%). The Mexican population of 11.3%, 9.9%, and 8.7%, respectively within census tracts 9702, 9706, and 9707 were all greater than 10% different than the State (5.1%) and the County (4.6%). The Puerto Rican population of 0.5% within census tract 9709 was greater than 10% different compared to the State (0.8%) and the County (0.3%).

Scotland County Census Tracts

The Black or African American population of 24.7% within Census Tract 105 was greater than 10% different of the State (21.5%). The Black or African American population of 40.5% within Census Tract 106 was greater than 10% different of the State (21.5%) and the County (38.6%). The American Indian population of 12.4% and 12.9% within census tracts 105 and 106 was greater than 10% different of the State (1.3%) and the County (10.9%). The Two or More Race population of 2.7% was greater than 10% different compared to the State (2.2%) and the County (2.2%). During the review of the Scotland County census tracts 105 and 106 when compared to the State, there were no exceedances of county demographics alone.

6.2 Age and Sex

6.2.1 Regional Setting

According to the US Census Bureau, QT-P1, Age Groups and Sex: 2010 Census Summary File 1, the following demographics were discerned from the applicable census tracts that make up the seven-mile radius as shown in Table 6-4. Ten census tracts make up the seven-mile radius within Richmond County – 9701, 9702, 9703, 9704, 9705, 9706, 9707, 9709, 9710, and 9711. US Census Bureau data on age and sex used for this report can be found in Appendix A. Two additional census tracts in Scotland County, 105 and 106 whose data on race can also be found in Appendix B. The largest percentage of the total state population (63.1%) was between the ages of 18 and 64, with an overall median age of 36 for males and 38.7 for females (Table 6-4).

Table 6-4. Regional Setting - Age Groups and Sex

Age	North Carolina

6.2.2 Local Setting – *Project Area*

To understand any trends that may occur throughout the seven-miles, one-mile intervals will be reviewed, as shown in Table 6-5. As the seven-miles overlapped into Scotland County, it will also be used to compare age group demographic data (Appendix B).

Within the seven-mile radius, EJSCREEN identified a total population of 28,754 individuals. Both Sexes age group of 18+ was made up of 75%, 75%, 74%, 73%, 75%, 76%, and 75%, respectively between 0-1, 1-2, 2-3, 3-4, 4-5, 5-6, and 6-7 mile, which exceed state (63.1%), Richmond County (61.3%), and Scotland County (61.3%) by more than 10%. No other exceedance was identified within the project area for age group from the EJSCREEN data.

3 Exceeded State, Richmond and Scotland county average by 10% or more

6.2.3 Local Setting – *Census Tracts*

According to the US Census Bureau, QT-P1, Age Groups and Sex: 2010 Census Summary File 1, the following demographics were discerned from the applicable census tracts that make up the seven-mile radius as shown in Table 6-6. Ten census tracts make up the seven-mile circumference within Richmond County – 9701, 9702, 9703, 9704, 9705, 9706, 9707, 9709, 9710, and 9711. US Census Bureau data on age groups used for this report can be found in Appendix A. Two additional census tracts in Scotland County, 105 and 106 whose data on age groups can also be found in Appendix B.

Richmond County Census Tracts

The age group of 64 years and over showed exceedances within census tracts 9702 for both sexes (16%), male (14.4%) and 9709 male (14.1%) of greater than 10% difference compared to Richmond County (14.3% and 12.3%). The age group of 64 years and over showed exceedances within census tracts 9704 (female 18.8%), 9705 (female 18.3%), and 9709 (both sexes 16.8%) of greater than 10% different than the State (female 14.5%; both sexes 12.9%) and Richmond County (female 16.4%; both sexes 14.3%).

Scotland County Census Tracts

The age group of under 18 years had exceedances within census tracts 105 and 106 for both sexes (26.4%) of a greater than 10% difference compared to the state (23.9%). The age group of under 18 years within census tract 105 for female (26%) also had a greater than 10% difference when compared to the state (22.8%) and Scotland County (23.5%).

6.3 Disability

6.3.1 Regional Setting

According to the 2013-2017 American Community Survey 5-Year Estimates, S1810 from the US Census Bureau, the state of North Carolina had an estimated total population of 9,745,671 noninstitutionalized citizens. Of those individuals, an estimated 13.7% (MOE +/- 0.1%) had a disability. The largest population of disabled civilians were 65 years and over (37.0%, MOE +/- 0.4%). The second largest population was the 18 to 64 years population at 11.7% (MOE +/- 0.1%). By race, American Indian and Alaskan Native had the highest estimated disability rate of 17.8% (MOE +/- 0.7%). Black or African American, White, and Two or More Races were the next three highest population estimates with disabilities in North Carolina, at 15.2% (MOE +/- 0.2%), 14.5% (MOE +/- 0.1%), and 12.1% (MOE +/- 0.6%), respectively (Table 6-8).

Richmond County had an estimated total population of 44,428 noninstitutionalized citizens. Of those individuals, an estimated 18.9% (MOE +/- 1.3%) had a disability. The total population with a disability in Richmond County (18.9%) was more than 10% greater than the state level of 13.7%. The largest population of disabled civilians were 65 years and older (42.1%, MOE +/- 11.1%). The second largest population was the 18 to 64-year population at 17.1% (MOE +/- 4.4%). Two or More Races had the highest estimated disability rate of 22.5% (MOE +/- 10.2%). Black or African American, White, and Asian were the next three highest population estimates with disabilities in North Carolina, at 21.5% (MOE +/- 2.5%), 19.0% (MOE +/- 1.7%), and 6.6% (MOE +/- 10.9%), respectively (Table 6-6). All populations in Richmond County had a greater than 10% difference in disabilities compared to the state except for populations under 5, American Indian and Alaskan Native, Native Hawaiian and Other Pacific Islander, and Some Other Race, and Hispanic or Latino.

Scotland County had an estimated total population of 33,477 noninstitutionalized civilians. Of those individuals, an estimated 19.5% (MOE +/- 1.3%) had a disability, which was more than 10% greater than the state level of 13.7%. The largest population of disabled civilians were 65 years and older (46.5%, MOE +/- 5.2%). By race, White had the highest estimated disability rate of 21.6% (MOE +/- 1.9%). American Indian and Alaska Native, Black or African American, and Two or More Races were the next three highest population estimates with disabilities in North Carolina, at 19.0% (MOE +/- 3.2%), 18.8% (MOE +/- 2.1%), and 12.4% (MOE +/- 7.4%), respectively (Table 6-6). All populations in Scotland County had a greater than 10% difference in disabilities compared to the state except for populations under 5 years, American Indian and Alaskan Native, Native Hawaiian and Other Pacific Islander, Two or More Races, and Asian.

6.3.2 Local Setting – *Census Tracts*

The EPA EJSCREEN does not provide any demographic data on disability within the project area. According to the US Census Bureau, 2013-2017 American Community Survey 5-Year Estimates, S1810, the following demographics were discerned from the applicable census tracts that make up the seven-mile circumference as shown in Table 6-9. The data is estimated data calculated from original 2010 census data. Ten census tracts make up the seven-mile circumference within Richmond County – 9701, 9702, 9703, 9704, 9705, 9706, 9707, 9709, 9710, and 9711. US Census Bureau data on disability used for this report can be found in Appendix B. Two additional census tracts in Scotland County, 105 and 106 whose data on age groups can also be found in Appendix A.

Richmond County Census Tracts

Total civilian noninstitutionalized population with a disability exceeded the state percentage (13.7%) by a 10% difference within census tracts 9702 through 9705 and 9709 and 9710 at percentages of 19.7%, 15.6%, 20.6%, 17.0%, 17.9%, and 19.0%, respectively. The same population with a disability exceeded by a 10% difference at both the state (13.7%) and Richmond County (18.9%) within census tracts 9706, 9707, and 9711 at percentages of 21.9%, 20.0%, and 24.0%, respectively. All the Richmond County census tracts exceeded the state average by greater than 10% for the second two age categories (18 to 64 and 65 years and over), except for Census Tract 9701. Many of those census tracts also exceeded the county averages (Table 6-9)

The population of males with a disability made up a percentage of 15.6% and 20.8% within census tracts 9703 and 9710, which exceeded by a 10% difference when compared to the state (13.6%). The population of males with a disability made up a percentage of 24.8%, 22.6%, 21.9%, 24.0%, and 23.9%, respectively which exceeded by a 10% difference within census tracts 9704, 9705, 9706, 9707, and 9711 when compared to the state (13.6%) and Richmond County (19.9%). The population of females with a disability made up a percentage of 15.6%, 17.0%, 18.8%, 17.7%, respectively within census tracts 9703, 9707, 9709, and 9710 exceeding a 10% difference when compared to the state (13.8%). The population of females with a disability made up a percentage of 21.9% and 24.0% within census tracts 9706 and 9711, exceeding a 10% difference when compared to both the state (13.8%) and Richmond County (18.0%).

Within the Race and Hispanic or Latino origin, the White population exceed the state average by more than 10% for Census Tract 9710. Census tracts 9704 (22.3%), 9706 (27.5%), 9707 (21.3%), 9709 (21.2%) and 9711 (21.9%) all exceeded both the County (19.0%) and the State (14.5%) average of White population with a disability by 10% or greater. Census tracts 9701, 9703, 9704, 9706, 9710 all had a Black or African American population with a disability that was greater than 10% different compared to the State average. Census tracts 9702 and 9711 had Black or African American populations with a disability that was greater than 10% different compared to the State and County average. American Indian and Alaska Native populations with disabilities were greater than both the County and State averages by more than 10% for census tracts 9702, 9705, 9707, and 9709. Census tracts 9704 and 9706 had an Asian population with disabilities that exceeded both County and State Averages by 10% or greater. Census tracts

9701 (18.5%) and 9707 (16.5%) both had Some other Race populations with a disability in exceedance of the county (3.6%) and state (4.9%) averages by greater than 10% differences. Two or more Races showed greater than 10% differences compared to both the county and state averages for all census tracts except 9701, 9704, and 9709. The Hispanic or Latino population with a disability exceeded the county and state averages by greater than 10% differences for census tracts 9705 (10.9%) and 9707 (13.6%).

Scotland County Census Tracts

Total civilian noninstitutionalized population with a disability exceeded the state percentage (13.7%) by a 10% difference for Census Tract 106 and exceeded both State and County averages for Census Tract 105 (21.9%). Census Tract 105 exceeded the State average by a greater than 10% difference for the population groups of 5 to 17 years of age (6.7%) as well as 18 to 64 years of age (15.1%). Census Tract 105 exceeded the state average for the population 18 to 64 years (18.5%) and exceeded both state (37.0%) and county (46.5%) averages for the population 65 years with a disability (58.5%). Both Scotland County census tracts exceeded the state average for male and female populations with a disability. Census Tract 105 had a male population with a disability (25.6%) that also exceeded the County average (19.4%) by a greater than 10% difference. Census Tract 105 had a White population with a disability (27.5%) that exceeded both County (21.6%) and State (14.5%) populations by more than a 10% difference, and a Black or African American population with a disability (16.9%) that exceeded the state (15.2%) by more than a 10% difference.

6.4 Poverty

6.4.1 Regional Setting

According to the Census Table S1701, Poverty Status in the Past 12 Months, 2013-2017 American Community Survey 5-Year Estimates, from the US Census Bureau, North Carolina had an estimated population of 9,685,511, with 16.8% (MOE +/- 0.2%) below the poverty level (Table 6-10). Some other Race had the highest percent living below the poverty level at 33.7% (MOE +/- 1.5%). The next three groups with the highest poverty level based on race were American Indian and Alaska Native (28.1%, MOE +/- 1.5%), followed by Black or African American (26.1%, MOE +/- .4%) and Hispanic or Latino and Two or more Races, both at 24.6% (MOE +/- 0.8% and +/- 1.1%, respectively). The age group with the highest population below poverty was Under 18 (23.9%, MOE +/- 0.4%), followed by 18 to 64 (15.9%, MOE +/- 0.2%).

Richmond County had an estimated total population of 44,288, with 25.8% below poverty (MOE +/- 2.3%). Hispanic or Latino had the highest percent living below the poverty level at 44.8% (MOE +/- 14.7%). The next three groups based on race with the highest poverty level were Black or African American (36.3%, MOE +/- 4.7%), followed by Two or More Races (31.4%, MOE +/- 16.6%) and American Indian or Alaska Native (25.2%, MOE +/- 12.0%). The age group with the highest population below poverty was Under 18 (39.9%, MOE +/- 5.0%), followed by 18 to 64 (23.3%, MOE +/- 2.3%). All populations with the exception of American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, and Some Other Race had greater than 5% differences in comparison to their respective state populations. (Table 6-10).

Scotland County had an estimated total population of 32,950, with 29.8% below poverty (MOE +/- 2.5%). Some other Race had the highest percent living below the poverty level at 48.5% (MOE +/- 25.8%). The next three groups based on race with the highest poverty level were Black or African American (43.8%, MOE +/- 3.9%), followed by Two or More Races (38.5%, MOE +/- 15.3%) and Hispanic or Latino (33.9%, MOE +/- 19.5%). The age group with the highest population below poverty was Under 18 (41.6%, MOE +/- 4.2%), followed by 18 to 64 (29.4%, MOE +/- 2.5%). All populations except for American Indian and Alaska Native, Asian, and Native Hawaiian and Other Pacific Islander had greater than 5% differences in comparison to their respective state populations (Table 6-10).

6.4.2 Local Setting

The EPA EJSCREEN does not provide any demographic data on poverty within the project area. According to the US Census Bureau, 2013-2017 American Community Survey 5-Year Estimates, S1810, the following demographics were discerned from the applicable census tracts that make up the seven-mile circumference as shown in Table 6-11. The data is estimated data calculated from original 2010 census data. Ten census tracts make up the seven-mile circumference within Richmond County – 9701, 9702, 9703, 9704, 9705, 9706, 9707, 9709, 9710, and 9711 and Scotland County – 105 and 106. US Census Bureau data on poverty used for this report can be found in Appendix A.

Richmond County Census Tracts

According to the Census Table S1701, Poverty Status in the Past 12 Months, 2013-2017 American Community Survey 5-Year Estimates, from the US Census Bureau, all Richmond County census tracts populations for whom poverty status is determined exceeded the state average of greater than 5% below the poverty level with the exception of Census Tract 9709 (Table 6-11). Of those, census tracts 9701 (27.3%), 9706 (33.7%), 9707 (44.8%), 9710 (39.1%) and 9711 (30.8%) also exceeded the county average (25.8%) for the population for whom poverty status is determined.

All populations within census tracts 9706, 9707, 9710 and 9711 had greater than 5% differences in comparison to their respective state populations, except for a few of the populations for whom the Census Bureau was unable to calculate an estimate for. Additionally, almost all populations also had greater than 5% difference in comparison to their respective county populations. Census tract 9701 exceeded both State and County averages by greater than a 5% difference for under the age of 18 (43.8%), male (27.7%), White (34.2%) and Hispanic or Latino (76.0%). Populations 18-64 years (22.8%) and female (27.0%) exceeded only the state average by more than a 5% difference. Census Tract 9702 exceeded only the state averages for population for whom poverty status is determined (19.8%), under age 18 (27.4%) and male (22.1%). The White population (22.3%) and Hispanic or Latino population (52.2%) both exceeded state and county averages by a difference greater than 5%.

Census Tract 9703 had three populations who exceeded only the state average by more than a 5% difference; Population for whom poverty status is determined (24.1%), male (22.1%) and female (26.2%); and four populations where the population estimate exceeded both the county and state average by more than a 5% difference; under 18 (43.6%), 18 to 64 (30.7%), 65 years and over (16.7%) and White (27.2%). Within Census Tract 9704, population for whom poverty status is determined (21.5%), age under 18 (36.8%), male (19.6%), female (23.1%), and White (13.2%) exceeded only the state average by more than a 5% difference. 65 years and over (19.5%), Black or African American (39.3%) and Asian (56.9%) exceeded both state and county by more than a 5% difference.

Within Census Tract 9705, population for whom poverty status is determined (24.5%), all three age groups (31.7%, 23.9% and 16.2%), male (18.5%), Black or African American (34.0%), and

Hispanic or Latino (40.8%) showed a greater than 5% difference when compared to only the respective state averages. Female (29.6%) and White (19.1%) populations showed a greater than 5% difference when compared to both the state and the county. The Census Tract with the lowest population estimate for whom poverty status is determined was 9709. Only male (16.7%) and White (13.2%) showed populations greater than 5% different compared to the state averages. Two or more races (47.1%) and Hispanic or Latino (58.3%) were greater than both the state and county averages by more than a 5% difference.

Scotland County Census Tracts

Both census tracts in Scotland County, 105 and 106, had a population or whom poverty status is determined (23.9% and 28.4%, respectively) that was greater than the state average by more than 5%, but lower than the percent estimated for Scotland County. Both census tracts had populations of age under 18 (37.9% and 39.6%, respectively), 18 to 64 (23.2% and 26.8%, respectively), male (20.7% and 26.4% respectively) and female (26.9% and 30.3% respectively) with a greater than 5% difference than the state average. Census Tract 105 had a White population (18.1%) that was greater than 5% different from the State, and an American Indian and Alaska Native population (32.5%) that was greater than 5% different in comparison to both the state and county percentages below poverty level.

Census Tract 106 had a Black or African American population below poverty level of 37.9%, which was more than 5% greater than the state population of 26.1%. The age group of 65 years and over (19.4%), White (21.6%), Asian (17.9%), Some other Race (54.4%), and Hispanic or Latino (49.3%) all had population percentages below poverty level that was greater than 5% different compared to both state and county level data (Table 6-12)

6.5 Household Income

6.5.1 Regional Setting

The following table (Table 6-13) was completed using data from the Census Table S1901, Income in the Past 12 Months (in 2017 Inflation-Adjusted Dollars) 2013-2017 American Community Survey 5-Year Estimates for North Carolina, which can be found in Appendix A. The North Carolina household income range with the highest percent was for \$50,000 to \$74,999, at 18.0%. The median household income was \$48,256 and the mean income was \$67,367.

The household income range for Richmond County with the highest percent was \$15,000 to \$24,999, at 17.6%. The median household income was \$32,526 and the mean income was \$45,516.

The household income range with the highest percent in Scotland County was for \$50,000 to \$74,999, at 16.5%. The median household income was \$32,739 and the mean income was \$43,613. Both counties had a mean and median income that was significantly lower than the states mean and medium income levels

6.5.2 Local Setting – Census Tracts

According to the Census Table S1901, Income in the Past 12 Months (in 2017 Inflation-Adjusted Dollars) 2013-2017 American Community Survey 5-Year Estimates, Census Tract 9707 had the lowest median income of \$18,100 and the highest percentage of the population within the less than \$10,000 household income range (28.1%). The Census Tract with the highest median income was 9701, at \$46,775. Five of the total 12 census tracts had income brackets below \$10,000 that were more than 10% different when compared to both the county and state. Eight of the total 12 census tracts had a percent of households in the next two income brackets (\$10,000 to \$14,999 and \$15,000 to 24,99) that were more than 10% different when compared to both the county and state. Of the total census tracts, seven also showed a greater than 10% difference when compared to the state and county averages for the three highest income brackets (Table 6-13). Of the total census tracts, three had a median income below \$25,000 indicated in red (Table 6-14).

6.5.3 Local Setting – Project Area

Within the one-mile radius of the proposed permit location, the highest percent (36%) was in the \$75,000 + income range² (Table 6-15). When looking at the six to seven-mile radius, the highest income bracket fell in the \$25,000-\$50,000, to 26%. However, at 3-4 miles the highest percent (26%) fell into the lowest income bracket of <\$15,000. Mean and median household income data is not provided in EJSCREEN, but per capita income is included.

² Income ranges provided in EJSCREEN provide fewer income ranges making data less specific than US Census data.

6.5.4 Per Capita Income

Per capita income is the mean income computed for every man, woman, and child in a particular group including those living in group quarters. It is derived by dividing the aggregate income of a particular group by the total population in that group (US Census Bureau). Per Capita Income data was obtained through the Census Table B19301, Per Capita Income in the Past 12 Months (In 2017 Inflation-Adjusted Dollars), 2013-2017 American Community Survey 5-Year Estimates. The per capita income was not adjusted for the individual mile rings, as this is not possible with this data set. The Per Capita income was \$19,876 within the seven-mile radius. The highest Per Capita income was in Census Tract 9709, at \$27,773, with the statewide Per Capita the second highest at \$26,779. The lowest Per Capita income was \$14,035 in Census Tract 9707, and the second lowest of \$16,269 in Census Tract 9711. (Table 6-16).

7 Limited English Proficiency (LEP)

The following tables (Table 7-1 and 7-2) were completed using data from Census Table B16001, Language Spoken at Home by Ability to Speak English for the population 5 years and over, 2011-2015 American Community Survey 5-Year Estimates for Richmond and Scotland Counties and census tracts 9701,9702, 9703, 9704, 9705, 9706, 9707, 9709, 9710, 9711, 105 and 106. These are the potential languages the Department could encounter around the project area where English assistance or translation may be necessary. Only the languages where one or more individual was estimated to “speak English less than very well” were included in the following table. Per the Safe Harbor Guidelines, should an LEP Group be identified during the pre-permit issuance process, written translations of vital documents for each eligible LEP language group that constitutes five percent or includes 1,000 members (whichever is less) of the population of persons eligible to be served or likely to be affected or encountered. If there are fewer than 50 persons in a language group that reaches the five percent trigger, then DEQ would not translate vital written materials but provide written notice in the primary language of the LEP language group of the right to receive competent oral interpretation of those written materials, free of cost. The safe harbor provisions apply to the translation of written documents only. Safe harbor guidelines are per the EPA guidance for LEP persons and followed by DEQ when deemed appropriate. For all identified counties and census tracts, the three highest instances of those who “speak English Less than very well” were Spanish or Spanish Creole, Korean and Vietnamese. All the languages (other than Spanish or Spanish Creole on the county level) have a relatively high margin of error.

8 Local Industrial Sites

1125 North NC Highway 177 Hamlet, North Carolina (proposed facility address) is just north of the town of Hamlet.

Some of the industries/businesses within seven miles of the facility include:

- CSX Hamlet Locomotive Shops
- Trinity Manufacturing
- Vista Products
- CorTek
- Plastek Group
- Unimin Corporation Mining Company
- The Rock Rockingham Motor Speedway
- Rockingham Dragway
- A solar farm
- CSX Panel Shop
- CSX Transportation
- Richmond Airport
- Superior Cranes
- Hood Packaging Corp

Some of the industries/businesses farther than 10 miles from the facility include:

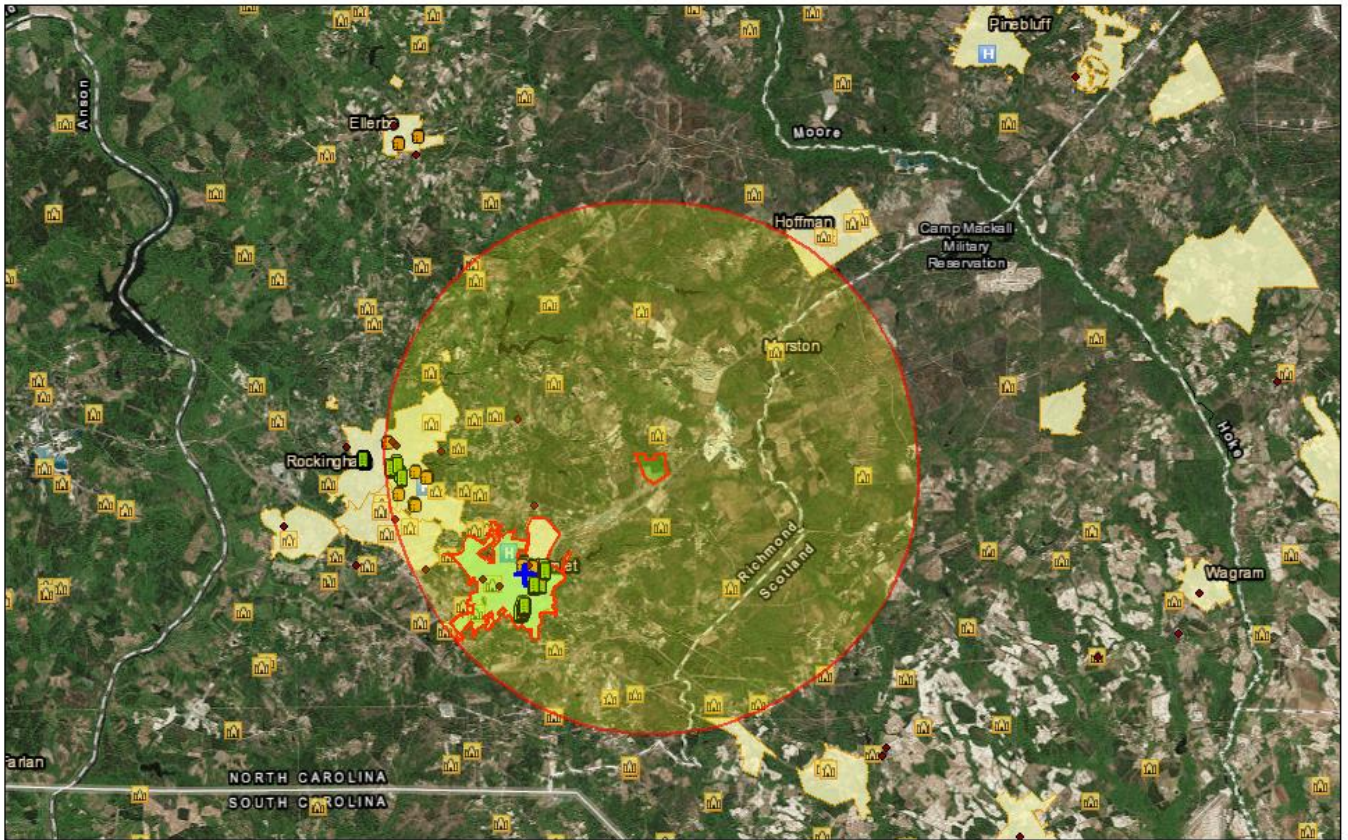

- Duke Energy Smith Energy Complex
- Vulcan Materials Company

9 Local Sensitive Receptors

The Environmental Protection Agency suggests that sensitive receptors include, but are not limited to, hospitals, schools, churches, daycare facilities, elderly housing and convalescent facilities. These are areas where the occupants are more susceptible to the adverse effects of exposure to toxic chemicals, pesticides, and other pollutants. Extra care must be taken when dealing with contaminants and pollutants in close proximity to areas recognized as sensitive receptors. For instance, children and the elderly may have a higher risk of developing asthma from elevated levels of certain air pollutants than a healthy individual aged between 18 and 64.

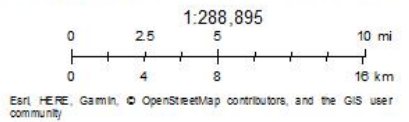

Within the 7-mile project radius (Figure 4), the following were identified as potential sensitive receptors:

- Monroe Avenue Elementary School
- Fairview Heights Elementary School
- Washington Street Elementary School
- Richmond 9th Grade Academy
- Hamlet Middle School
- Richmond Senior High School
- Richmond Memorial Hospital
- Zion Church
- Fellowship Church
- Fairview Church
- Congregational Church
- Highland Pines Church
- Glenwood Church
- Knob Hill Church
- Greenville Church
- Mount Calvert Church
- Mount Olive Church
- Knob Hill Church
- Roberdell Baptist Church
- Ebonese Church
- Philadelphia Church
- Beaverdam Church
- God's Hope Church
- Timmons Grove Church
- Smiths Grove Church
- Richmond Pines Nursing Home
- Marks Creek Presbyterian Church
- House of Prayer Church
- Bethel Hill Church
- Mc Donald Church

EJSCREEN 2018

Figure 4. Sensitive Receptor Map – Seven Mile Radius from Enviva site

During the public hearing to discuss the permit modification on November 8th, 2018, there was public interest in assessment of Dobbins Heights as well as the City of Hamlet. Initial pre-permit ambient air modeling by DAQ had determined the furthest distance to the maximum impact for any of the proposed pollutants is 0.83 miles for the PM_{2.5} 24-hour averaging period. In addition, Class II Significance Model sets the PM_{2.5} Significant Impact Area at 3.0 km (or 1.86 miles), the DAQ permitting staff suggested a radius of 2 miles for EJ analysis. Therefore, DEQ further assessed ambient air modeling and demographic data of both Dobbins Heights and the city of Hamlet based on public concern. Both communities are shown in Figure 5, southwest of the Enviva facility. Additional ambient air modeling data is discussed in Section 4.

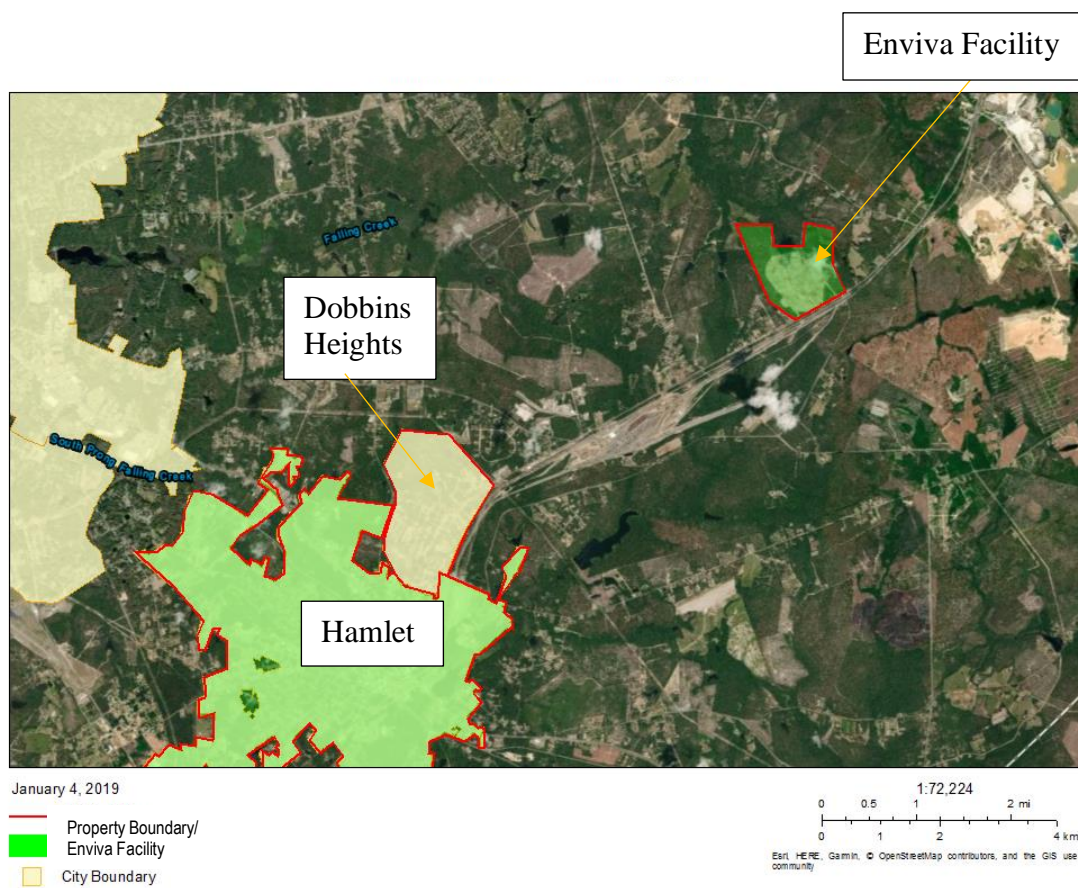

Figure 5. Community locations in relationship to the Enviva facility.

9.1 Township of Dobbins Heights

Dobbins Heights is a small, incorporated township (in the late 1980's), located approximately three miles from the facility. The town has a population of 866 individuals, with an estimated 34.6% below poverty (2013-2017 US Census, Table S1701). This percentage increases to 42.1% for both the under 18 years and over 65 years populations. According to the 2010 US Census table QT-P3, Race and Hispanic or Latino Origin: 2010, 733 of the 866 individuals were Black or African American (84.6%). 92 (10.6%) were White, 14 (1.6%) were Hispanic or Latino (of any race), and 10 (1.2%) were American Indian and Alaska Native. Dobbins Heights was discussed as a potential community of concern in several comments at the public hearing, held Thursday November 8th, 2018.

9.2 City of Hamlet

The community living in the vicinity was named Hamlet in 1873 and incorporated in 1897. Hamlet resides adjacent to the southeastern side of Dobbins Heights. The city has a population of 6,500 individuals, with an estimated 28.2% below poverty (ACS, 2015 US Census from URL <https://www.citytowninfo.com/places/north-carolina/hamlet>). According the ACS 2013-2017 US Census EJSscreen report of Hamlet, the per capita income was \$22,476. Race and ethnicity for the city are made up of 56% White, 39% Black or African American, 2% American Indian, 4% Two or More Races, and 2% Total Hispanic population.

10 Health

The University of Wisconsin Population Health Institute in collaboration with the Robert Wood Johnson Foundation have calculated a County Health Rankings system for all the States in the United States (www.countyhealthrankings.org). This ranking is based on health outcomes (such as lifespan and self-reported health status) and health factors (such as environmental, social and economic conditions). According to this report, out of all 100 counties in North Carolina (with 1 indicating the healthiest), Richmond County is ranked number 98 (Figure 6) and its neighbor, Scotland County, is ranked 99.

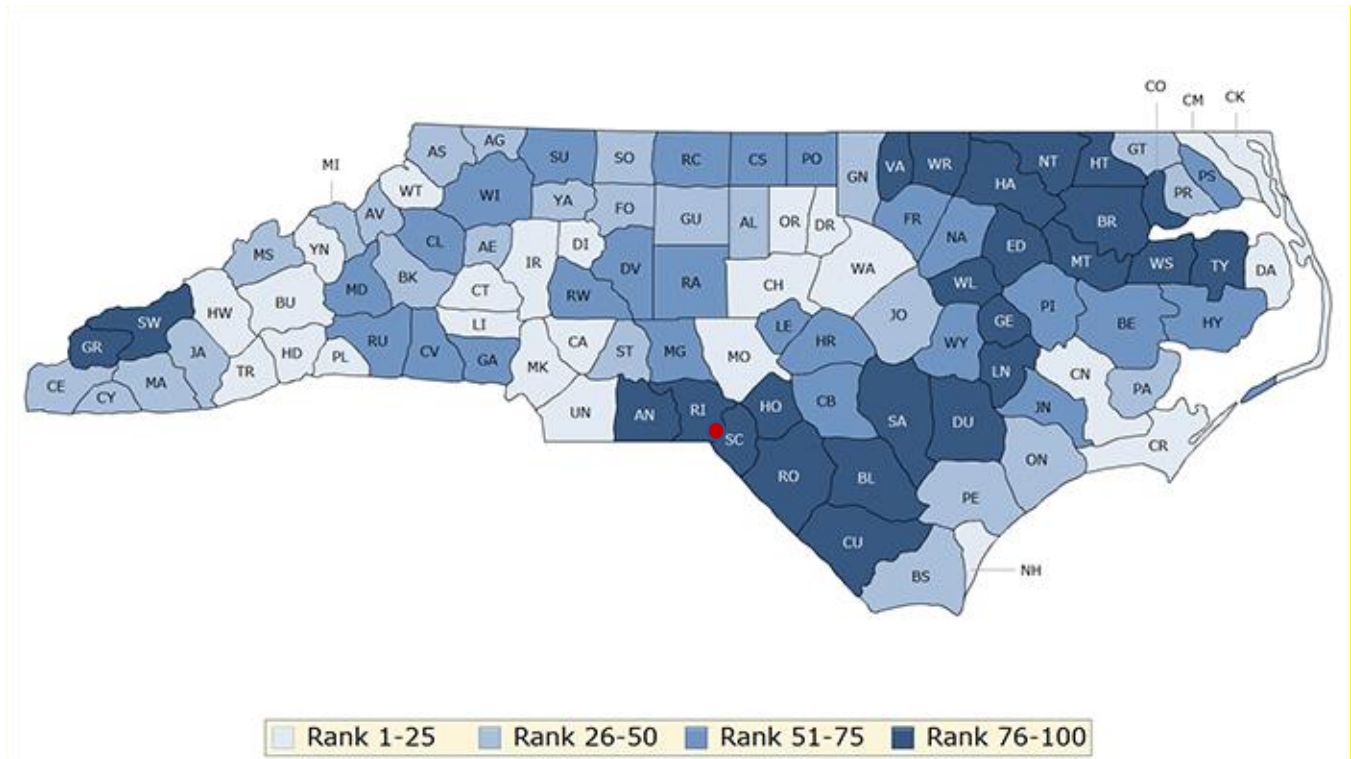

Figure 6. County Health Rankings for North Carolina, provided by University of Wisconsin Public Health Institute.

According to the 2016 Richmond County Health Assessment (CHA), the leading cause of death is heart disease (27.6%), followed closely by cancer at 18.2% (Table 10-1). Respiratory diseases account for a much smaller percentage of deaths and falls into 3rd place at 6.4%. (NC State Center for Health Statistics). According to the survey responses, the top 4 unhealthy behaviors in the County were all related to substance abuse from illegal drug usage, to alcohol abuse and drunk driving and the most common being smoking or tobacco use (Richmond County CHA). Asthma was reported as the second to last (of seven) of the self-reported health conditions in the County. The same data was not found to be available for Scotland County, meaning an accurate comparison would not be feasible, and therefore was excluded from this analysis.

Table 10-1. Health Assessment - Leading Causes of Death (Richmond County vs. North Carolina)

Cause of Death	Richmond County	North Carolina
Diseases of the Heart	27.6%	20.7%
Cancer	18.2%	21.7%
Chronic Lower Respiratory Diseases	6.4%	5.9%
Diabetes	6.4%	3.1%
Cerebrovascular Disease	6.2%	5.6%
Alzheimer's Disease	4.2%	4.3%
All other Unintentional Injuries	3.7%	3.9%
Nephritis, Nephrotic Syndrome and Nephrosis	3.2%	2%
Essential (primary) Hypertension and Hypertensive Renal Disease	1.7%	1%
Influenza and Pneumonia	1.7%	2.4%

11 Field Reconnaissance

On October 26, 2018, Department staff consisting of Air Quality Deputy Director Michael Pjetraj; Public Affairs staff Sharon Martin, Renee Kramer and Bailey Recktenwald, as well as Title VI and Environmental Justice Coordinator Sarah Rice met with members of Concerned Citizens of Richmond County and Reverend Cary Rogers from Blue Ridge Environmental Defense League. Department staff met at eleven in the morning at the Hamlet Outreach Center located at 300 Hendersonville Street, Hamlet, NC 28345. The Department answered questions the Concerned Citizens of Richmond County had regarding the permit modification. On October 26, 2018, Renee Kramer and Sarah Rice were able to verify as best as possible the data provided by the U.S. Census Bureau.

12 Conclusion

Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies (US EPA). This report has examined the demographic and environmental conditions in North Carolina, Richmond County, Scotland County, census tracts 9701 through 9707, 9709 through 9711, 105, and 106, and the seven-mile radius around the Enviva Hamlet facility. Emission reduction plans outlined in the 2018 permit modification application and county level health data were also included.

Enviva Hamlet, LLC has applied for a modification to their air quality permit from the DAQ. The facility is under construction and has already obtained a PSD permit. The recent application modification has been submitted to now include greater emission control measures, thus reducing volatile organic compounds, particulate matter and hazardous air pollutant emissions. The modified permit would allow the facility to operate with emissions greater than 100 tpy, but less than the 250 tpy, which was in their original permit.

Concerned citizens within the communities surrounding the facility have been advocates for more stringent controls at the Enviva Hamlet facility for protection of human health and the environment. Given the permit modifications outlined in the proposed application, the emissions should decrease by almost half from the current permit. Due to the level of the emissions and initial screening measures (Class II Significance Modeling results), a full impact analysis was required, which included evaluating the impacts from the Enviva Hamlet facility as well as the contributions from other sources (facilities) of the same pollutants within a radius of approximately 38 miles. An initial ambient modeling and Class II Significance Model sets the PM_{2.5} Significant Impact Area at 3.0 km (or 1.86 miles), the DAQ permitting staff suggested a radius of 2 miles for EJ analysis. However, after review of comments from the public hearing additional modeling was assessed to seven miles, which is inclusive of Dobbins Heights and Hamlet.

It is important to keep in mind the following limitations of this study: census data is from 2010 and may be outdated; the more recent census data up through 2017 are estimates; EJSCREEN does not provide all of the data categories that were used in this analysis so the census tract and regional data cannot be compared to the radius used surrounding the facility boundary; census tracts can still be relatively large geographic areas and do not show exact locations of each population; some of the census tracts overlap with the seven-mile radius only slightly; and the department cannot determine which populations are in the overlap.

The Department has assessed the available demographic and socioeconomic data of the communities surrounding the Enviva Hamlet, LLC facility regarding their permit application for enhanced emission controls. The surrounding area has a high potential concern for poverty and low household income, with the data also indicating a large disparity between income brackets. This means that while there may be a relatively high percentage of households with an income level greater than \$75,000 (around 32%) in the one and two-mile radius, there are also a significant number of households living below \$25,000 in the same area (around 35%). There is

a percentage increase starting at three-four mile (around 49%) interval for households within the income bracket below \$25,000 to 7 miles, as shown in the graph below. In addition, the data shows approximately at the 3-4-mile interval, the \$75,000 household income bracket starts to decrease (around 15%). The data also shows that the number of households in the highest income bracket decreases (to 16% at 7 miles) while the lowest income bracket increases (to 42% below \$25,000 at 7 miles). This indicates that the area closest to the facility is overall a wealthier location than the areas farther away from the facility.

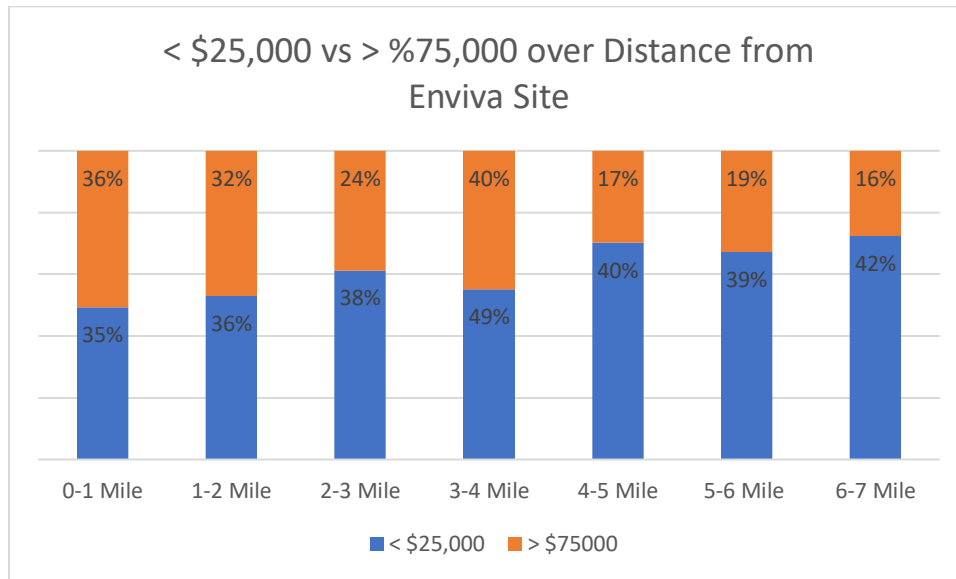

Figure 7. Household Income brackets (< \$25,000 and > \$75,000) over seven mile project area

The racial composition showed a high White population closest to the facility within the one-mile radius (72%). As the radius increases, the lowest percent of White population was in the 3-4 mile area (46%), where the highest Black or African American population (44%) also was, as shown in the graph below. The household income data showed similar trend at 3-4 miles, with the lowest income bracket of less than \$15,000 being the largest at 26% of the population. This data coincides with the location of Dobbins Heights, a community identified by several public comments as having a high Black or African American population. At 7 miles, the White population was 57%, higher than the 3-4 mile radius, but lower than the closest 0-1 mile radius population. Richmond and Scotland County’s, most census tracts in both counties (especially higher in Scotland County) and all the radius brackets looked at showed potential concern for American Indian or Alaska Native populations as called out in the graph below. All the radius brackets also showed potential concern for Hispanic or Latino populations compared to Scotland County as show below. Indicating a similar population trend was the primary language identified as having the potential need for translation services in this area being Spanish or Spanish Creole.

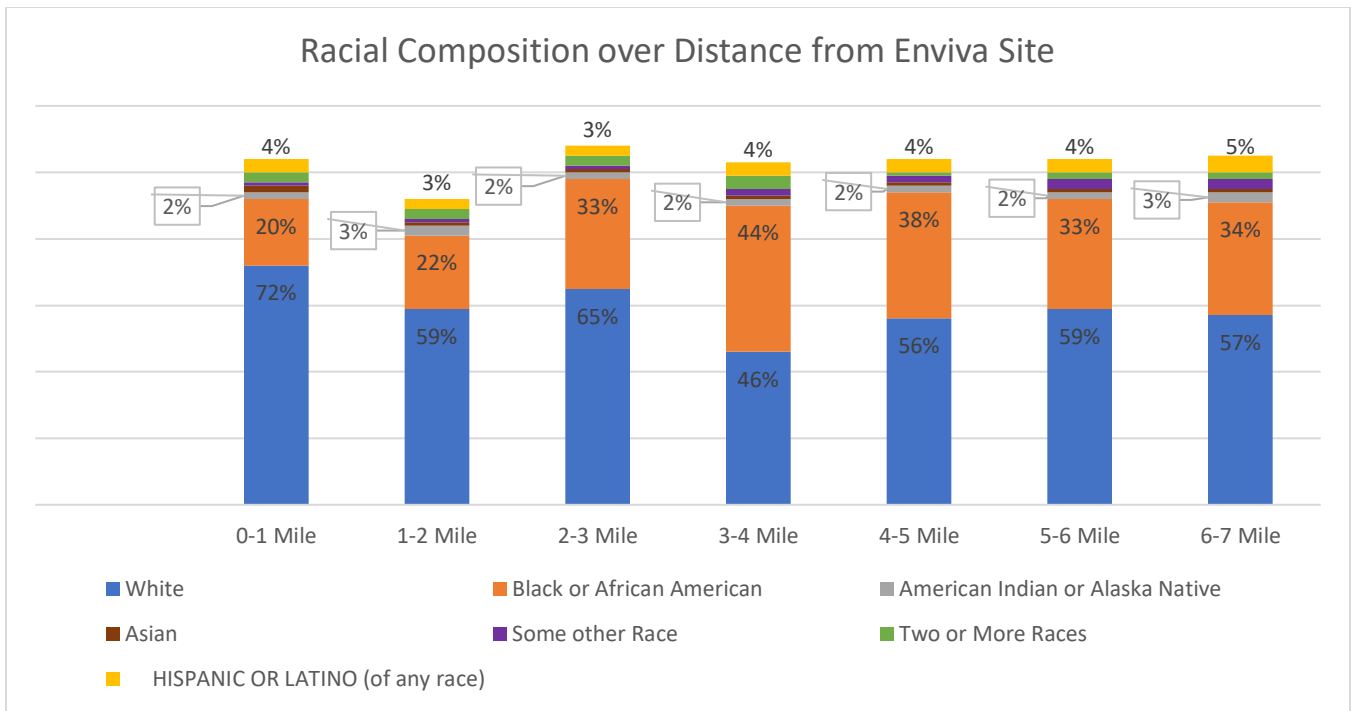

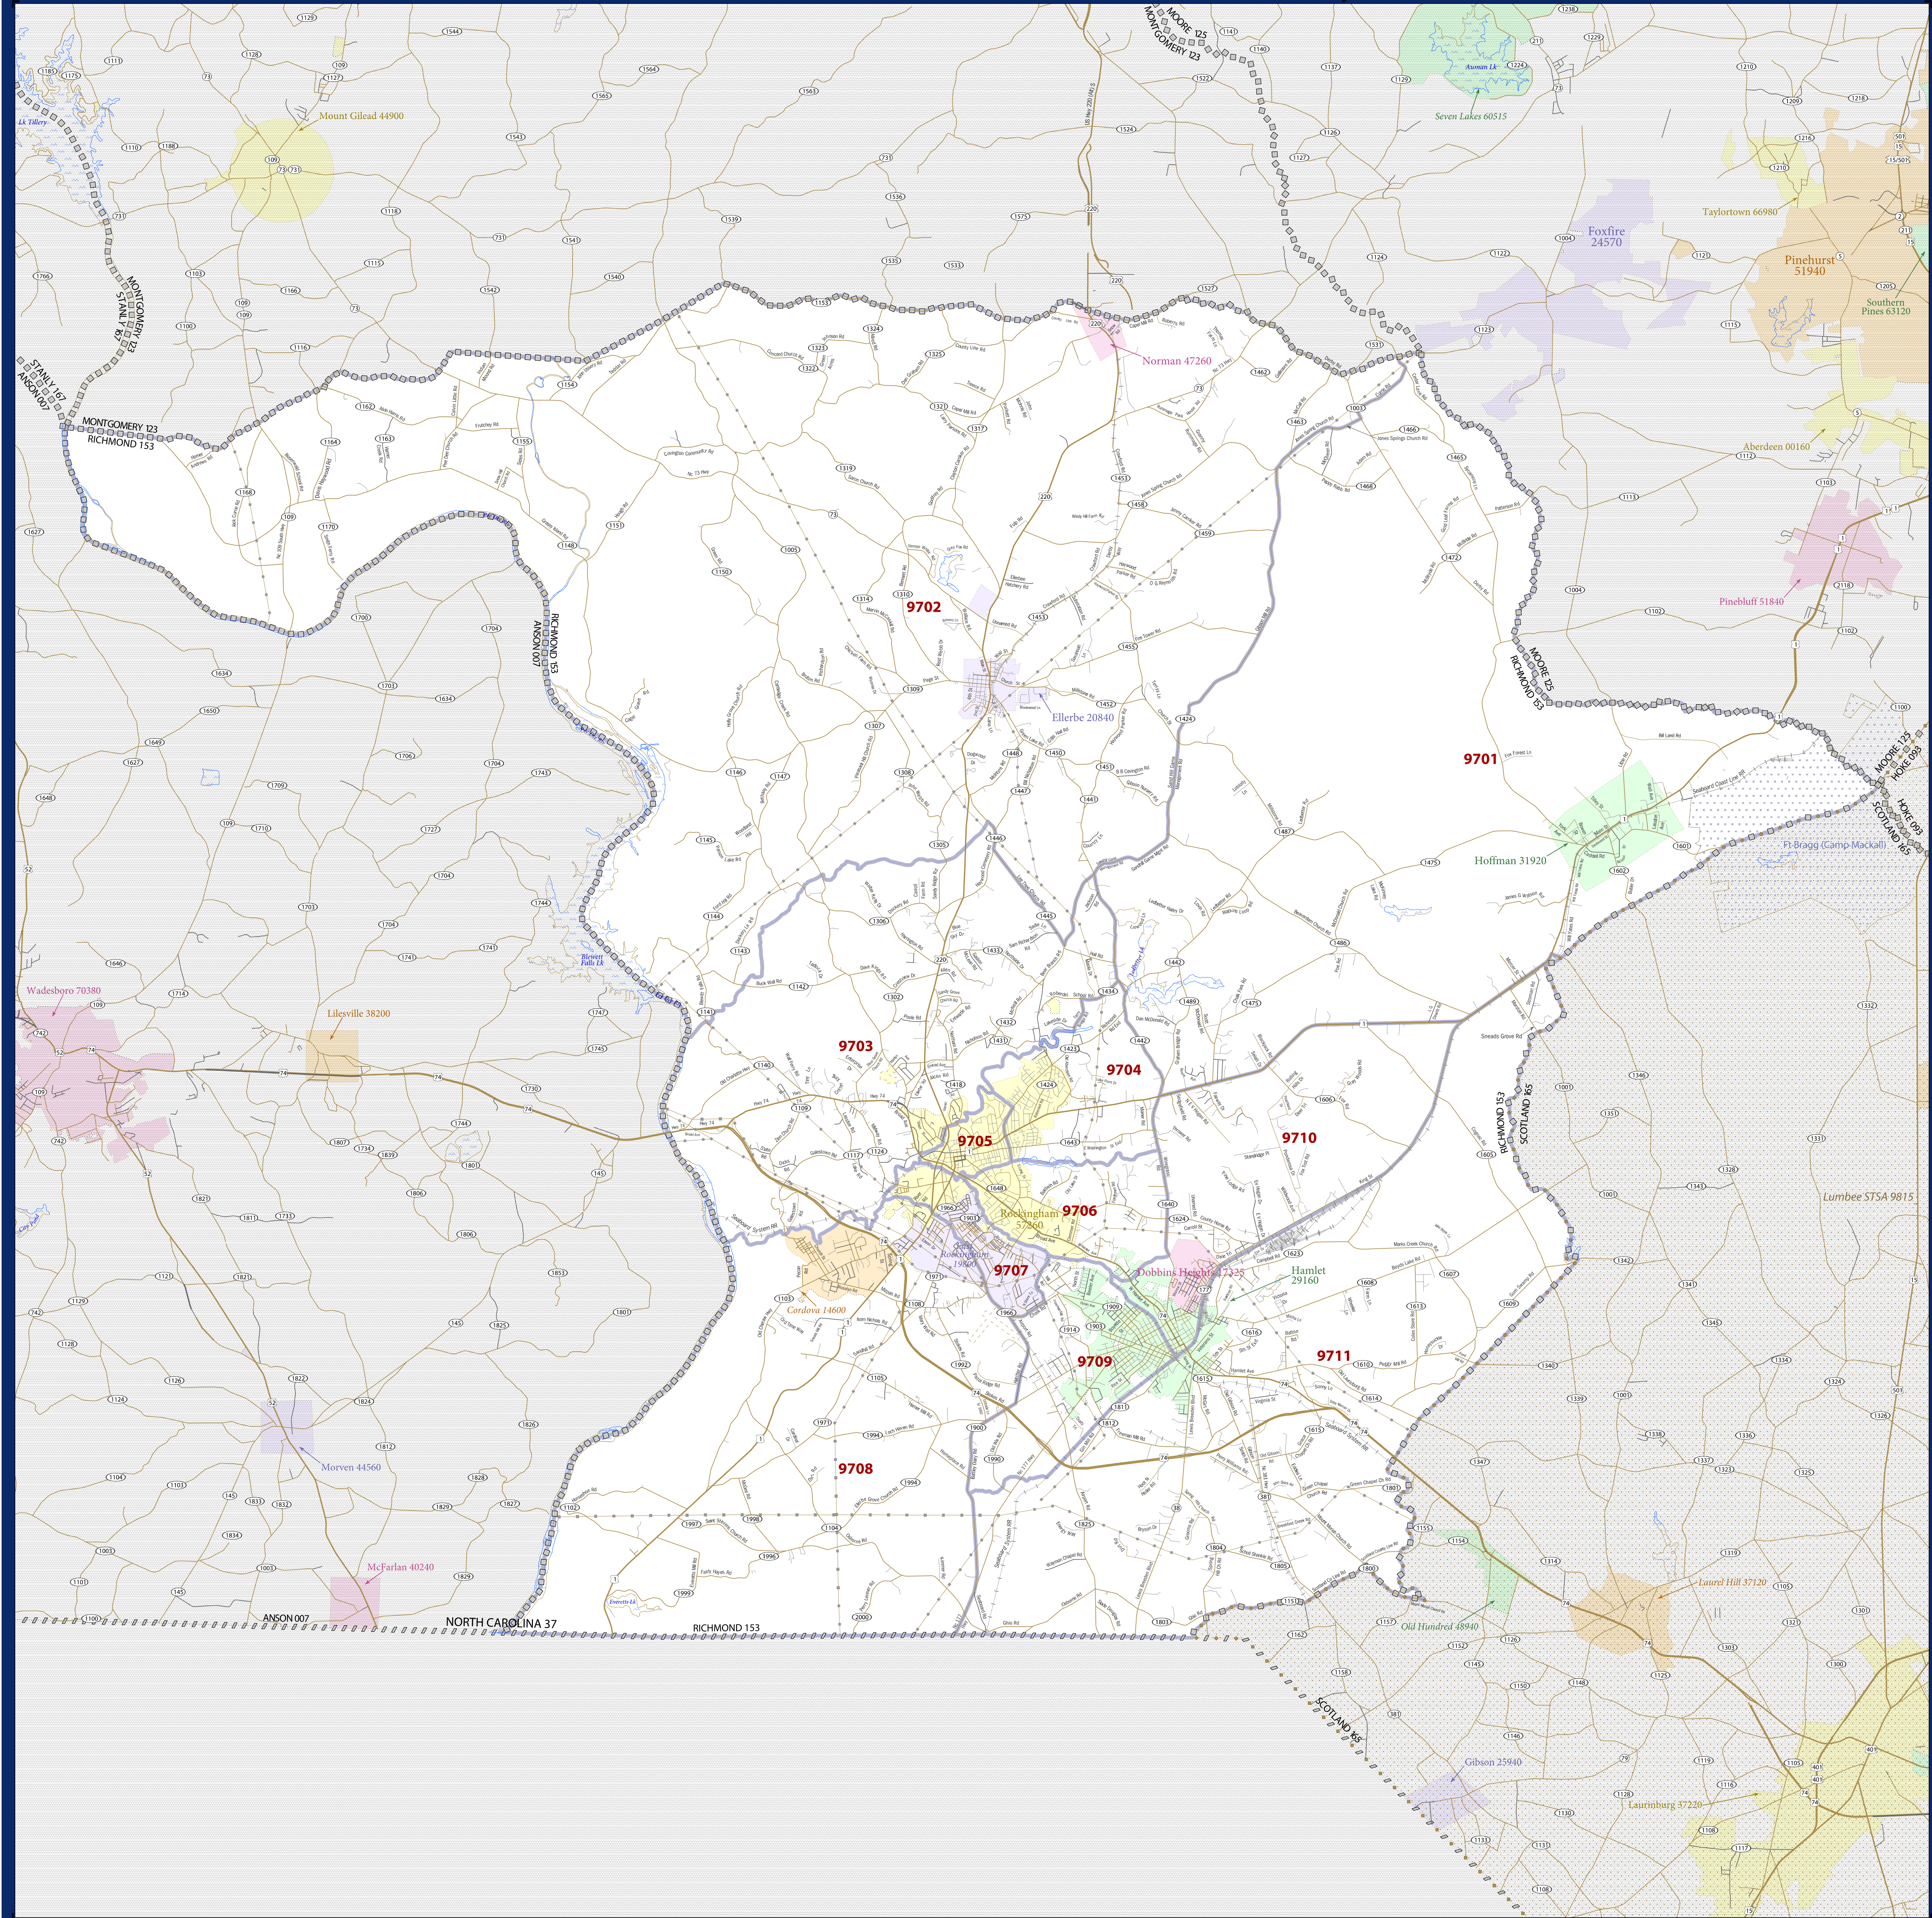

Figure 8. Racial Composition over seven-mile project area

There also showed a high concern for disability in this area, as most of the identified US Census disability data was greater than 10% when compared to the state. The Richmond County health report shows a high concern for overall health, most notably cardiovascular disease.

DEQ recognizes the area surrounding this facility has potential for overburdened communities. Further engagement will be conducted throughout the remainder of the permitting process with interested parties, with a focus on those communities identified in this report as potential overburdened communities.

Where state, county, and/or MCD boundaries coincide, the map shows the boundary symbol for only the highest ranking of these boundaries.

1 A "*" following a place name indicates that a false MCD exists with the same name and FIPS code as the place; the false MCD label is not shown.

2 MCD boundaries are shown in the following states in which MCDs have functioning governments: Connecticut, Maine, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and Wisconsin.

3 Place label color correlates to the place fill color.

DISABILITY CHARACTERISTICS

2013-2017 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Subject	Richmond County, North Carolina				
	Total		With a disability		Percent with a disability
	Estimate	Margin of Error	Estimate	Margin of Error	Estimate
Total civilian noninstitutionalized population	44,066	+/-226	8,166	+/-588	18.5%

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2013-2017 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

INCOME IN THE PAST 12 MONTHS (IN 2017 INFLATION-ADJUSTED DOLLARS)

2013-2017 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

When information is missing or inconsistent, the Census Bureau logically assigns an acceptable value using the response to a related question or questions. If a logical assignment is not possible, data are filled using a statistical process called allocation, which uses a similar individual or household to provide a donor value. The "Allocated" section is the number of respondents who received an allocated value for a particular subject.

While the 2013-2017 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

S1701

POVERTY STATUS IN THE PAST 12 MONTHS

2013-2017 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2013-2017 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Methodological changes to data collection in 2013 may have affected language data for 2013. Users should be aware of these changes when using multi-year data containing data from 2013. For more information, see: Language User Note.

While the 2011-2015 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

	Estimate	Margin of Error
Speak English less than "very well"	0	+/-17

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Methodological changes to data collection in 2013 may have affected language data for 2013. Users should be aware of these changes when using multi-year data containing data from 2013. For more information, see: Language User Note.

While the 2011-2015 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2011-2015 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
