

Assessment of the Albemarle Sound-Roanoke River (A-R) Striped Bass in North Carolina

DEPARTMENT OF ENVIRONMENTAL QUALITY

Marine Fisheries

N.C. Marine Fisheries Commission Meeting | Laura Lee & Charlton Godwin | Nov. 19, 2020

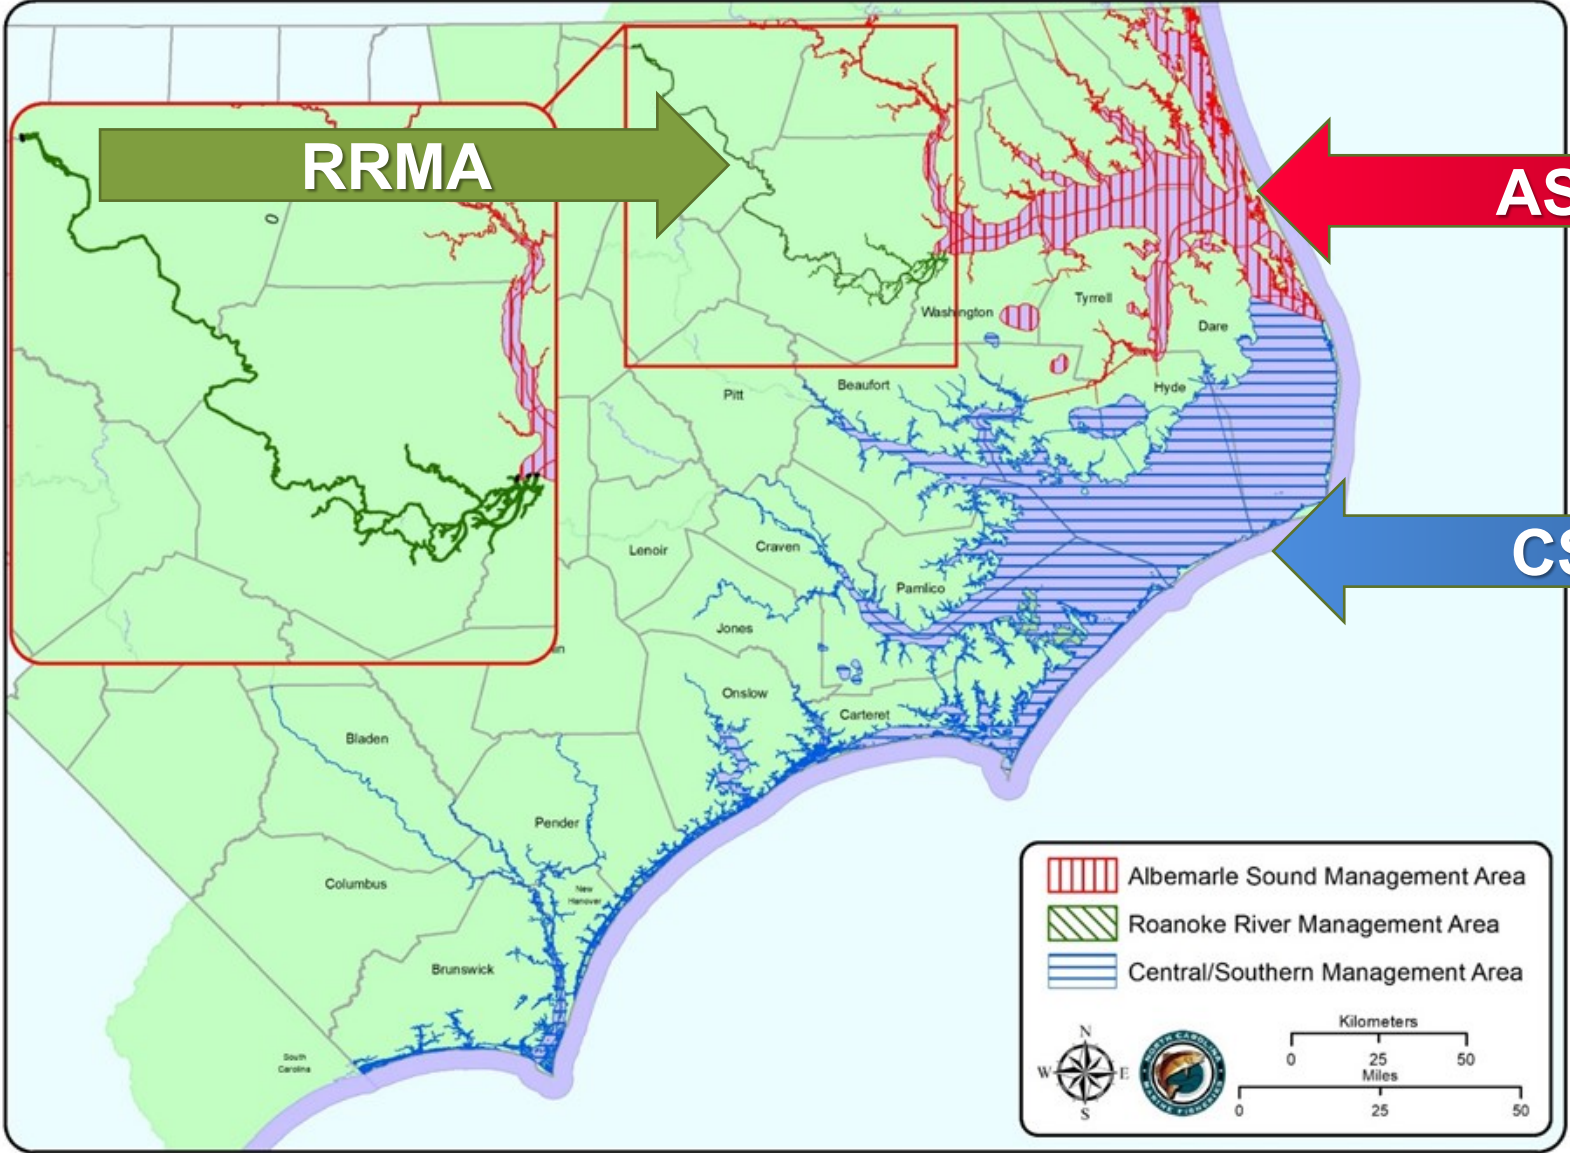

PRESENTATION OUTLINE

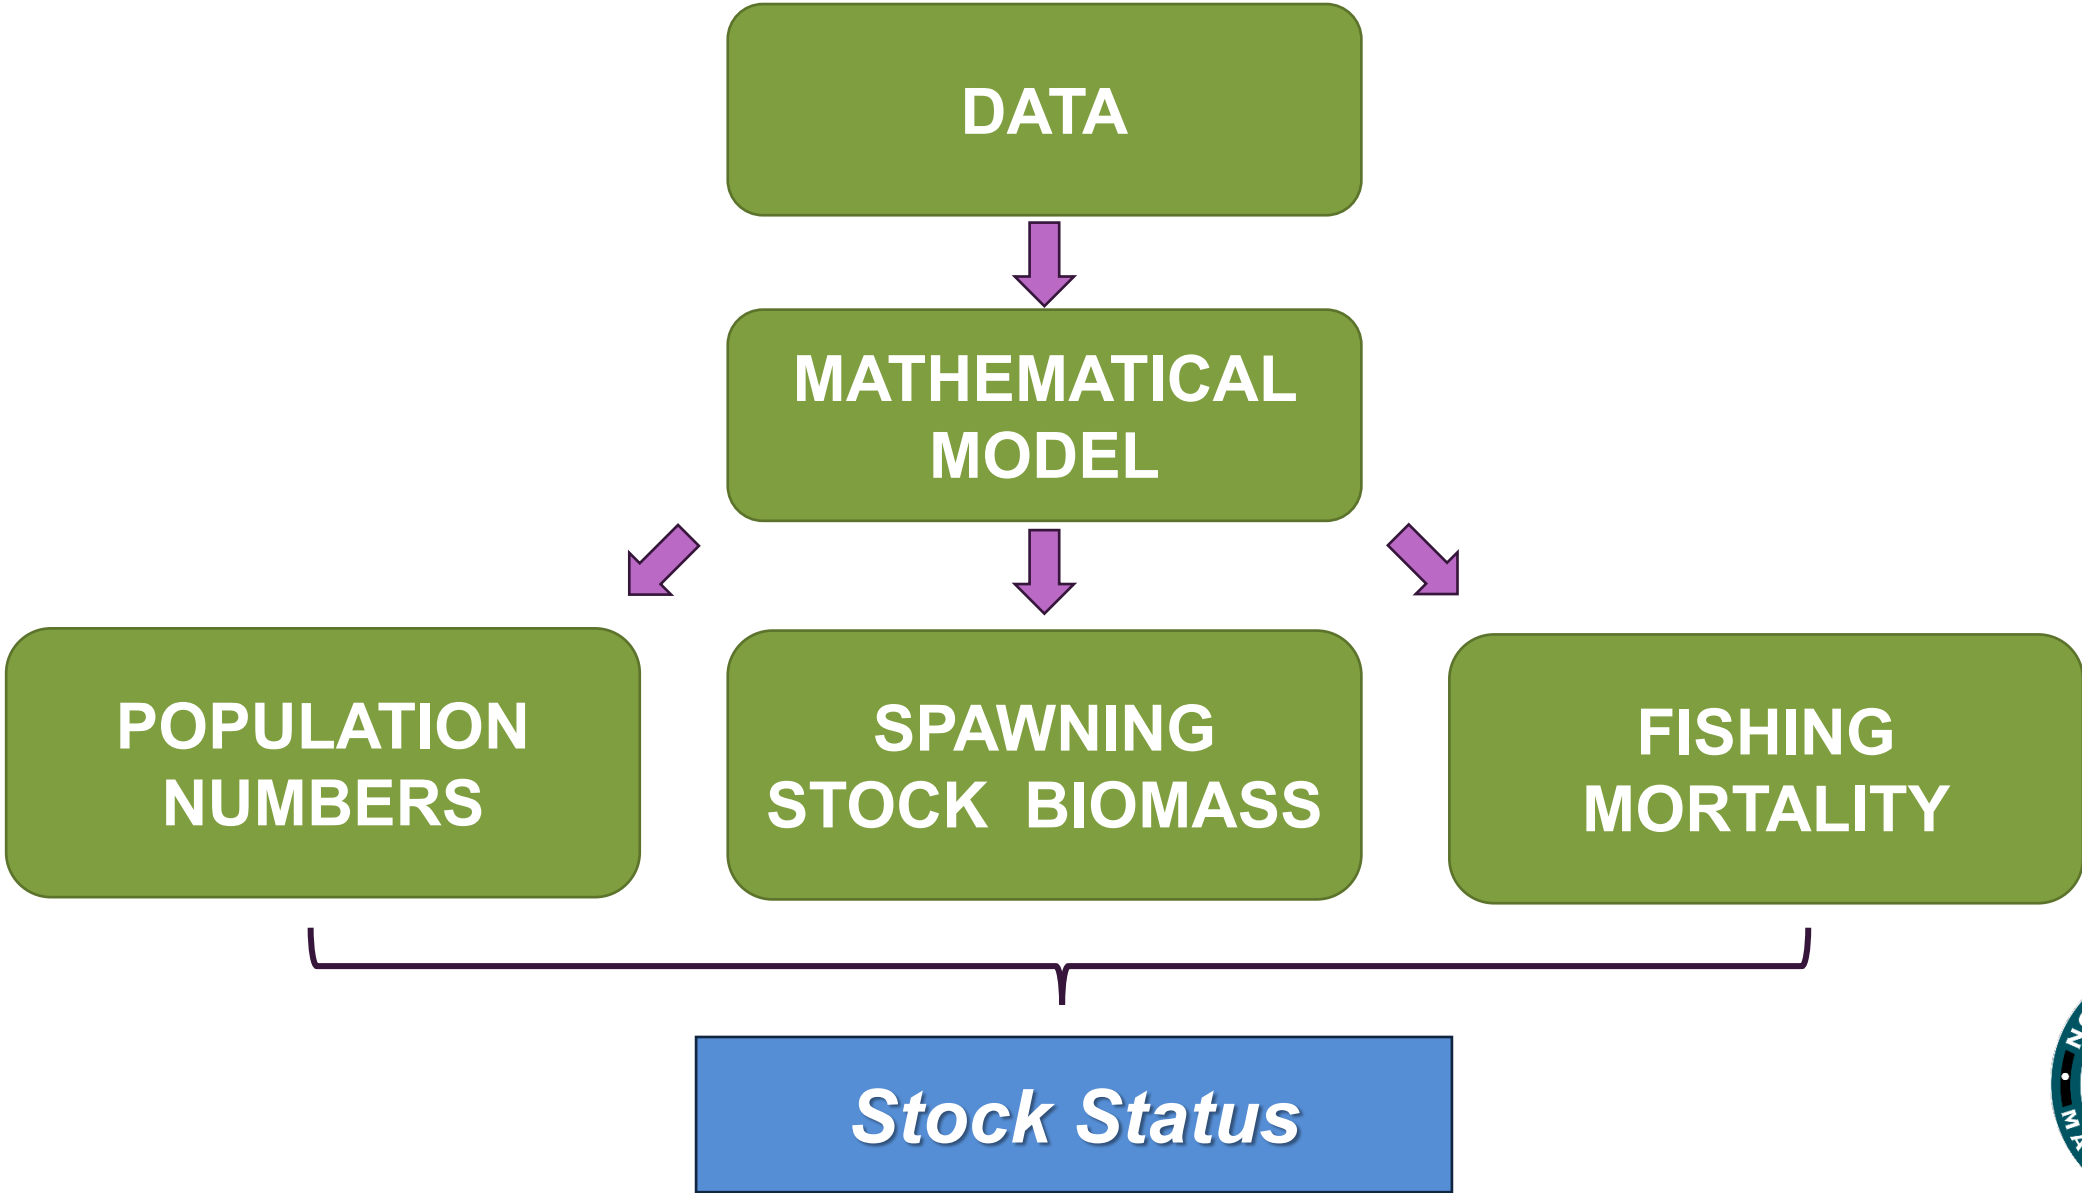

- Results of Albemarle-Roanoke (A-R) striped bass stock assessment
- Adaptive Management: 2020 Revision to Amendment 1 to the Striped Bass FMP
- Causes for the population decline
- Ongoing development of Amendment 2 to the Striped Bass FMP

Striped Bass Management Areas

A-R STOCK ASSESSMENT

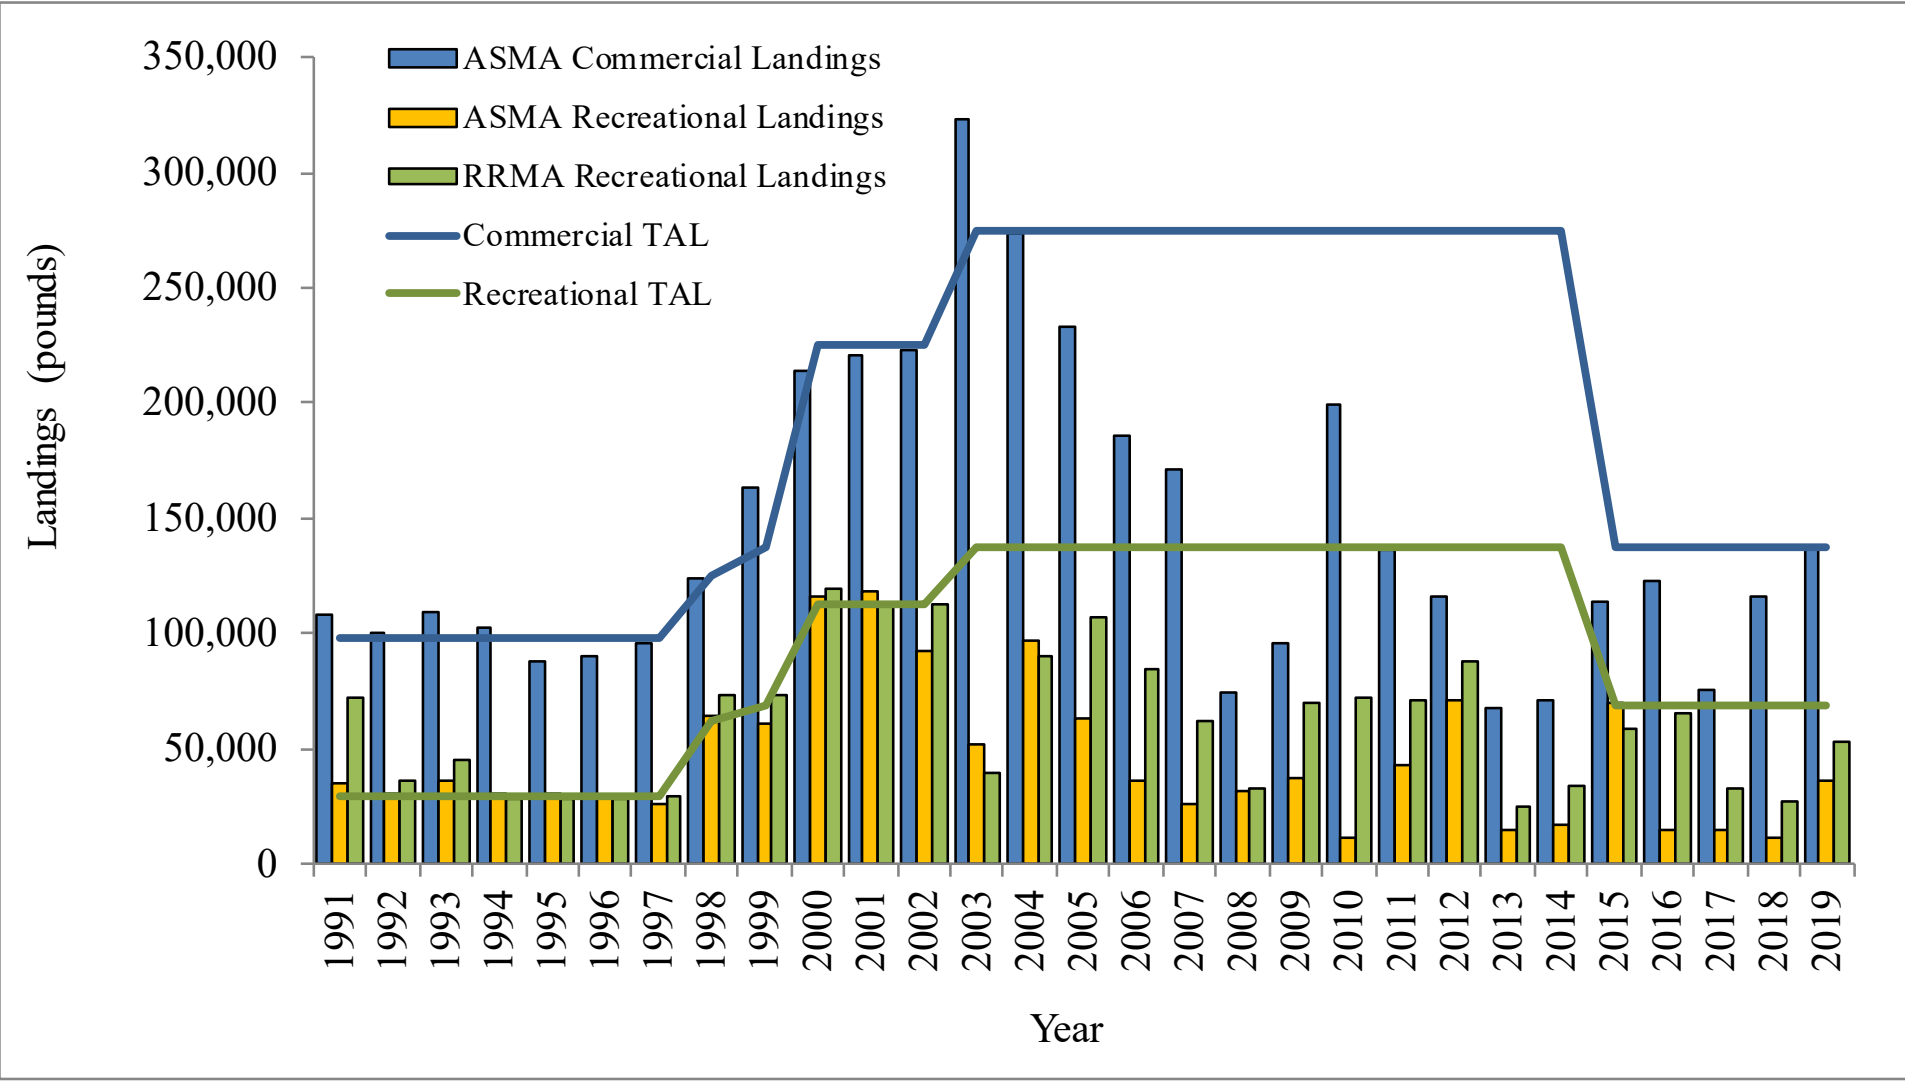

A-R STOCK ASSESSMENT Data

- Time series: 1991 through 2017
- Fisheries-Dependent
 - Commercial landings and dead discards
 - Recreational harvest and dead discards
 - Biological samples (length, weight, age)
- Fisheries-Independent
 - Juvenile survey
 - Fall gill net survey
 - Spring gill net survey
 - Electrofishing survey
 - Biological samples (length, weight, age)

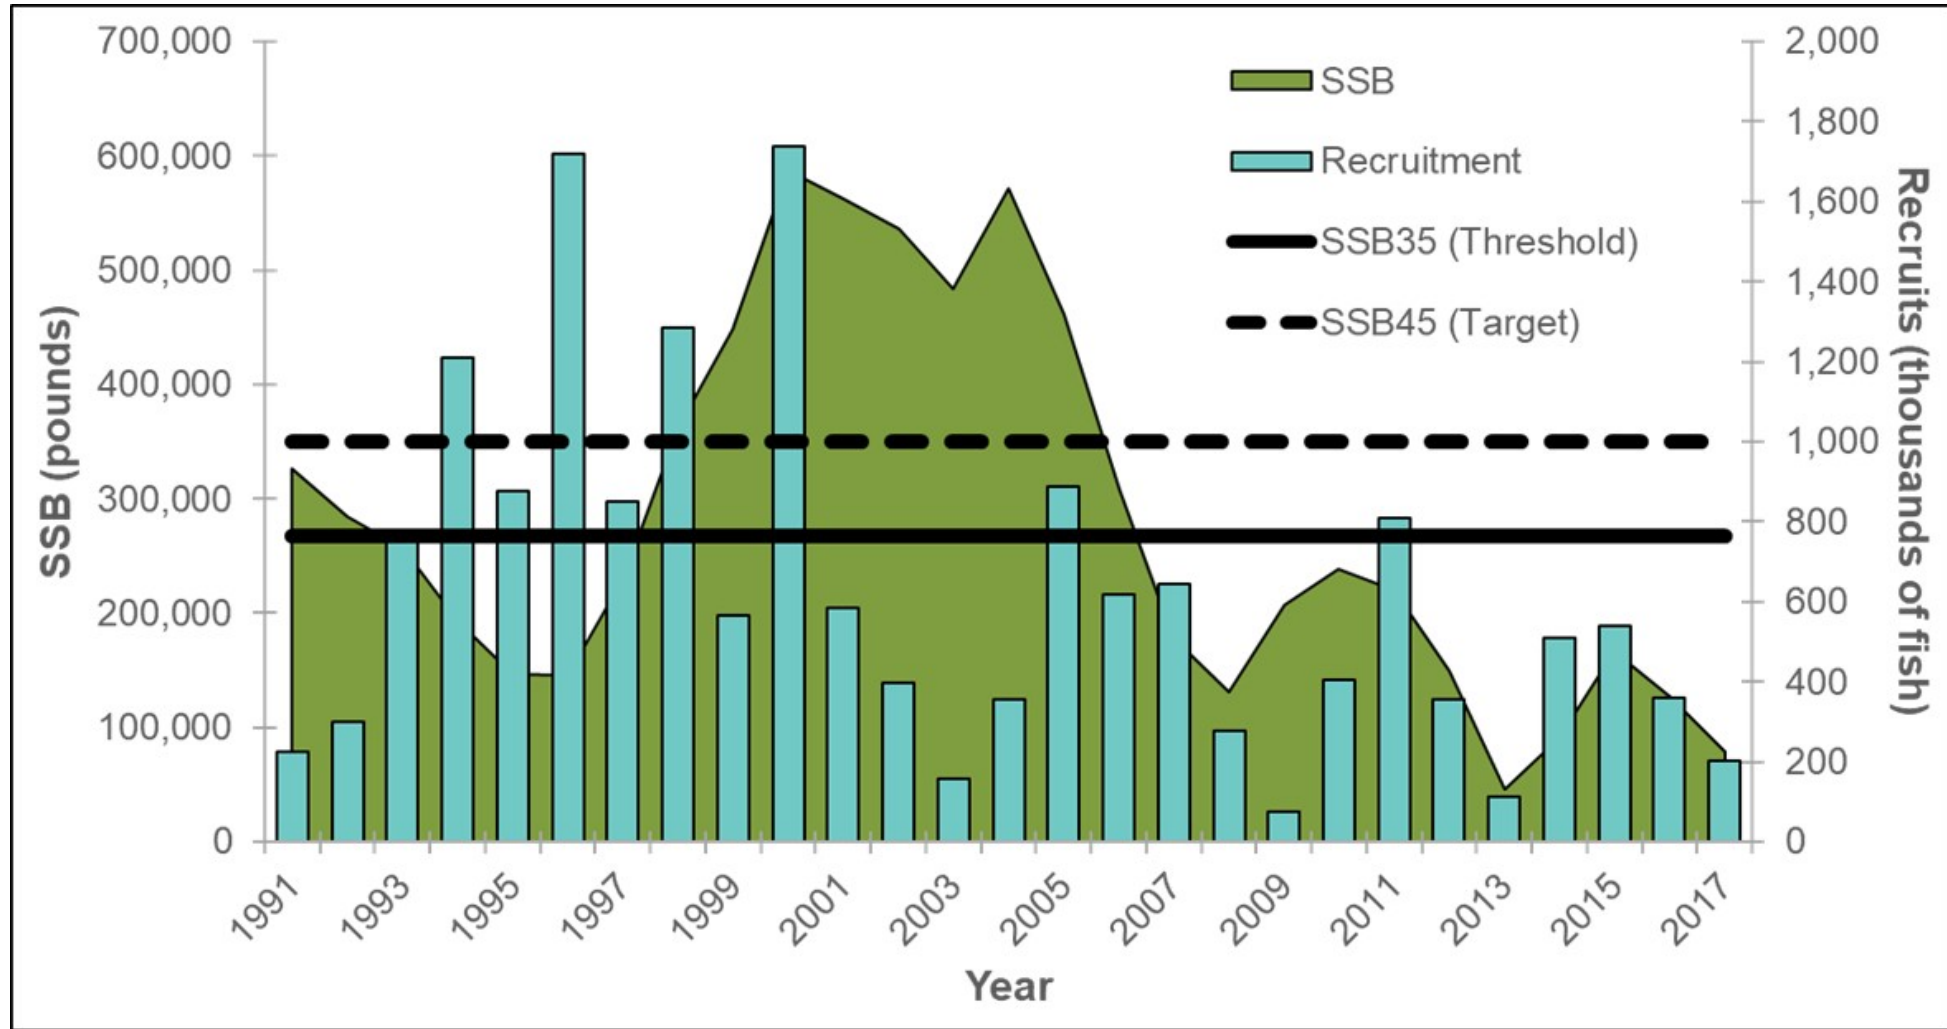

A-R STOCK ASSESSMENT

Data—Landings

A-R STOCK ASSESSMENT

Model—Spawning Stock Biomass (SSB) & Recruitment

A-R STOCK ASSESSMENT

Stock Status 2017—Female Spawning Stock Biomass (SSB)

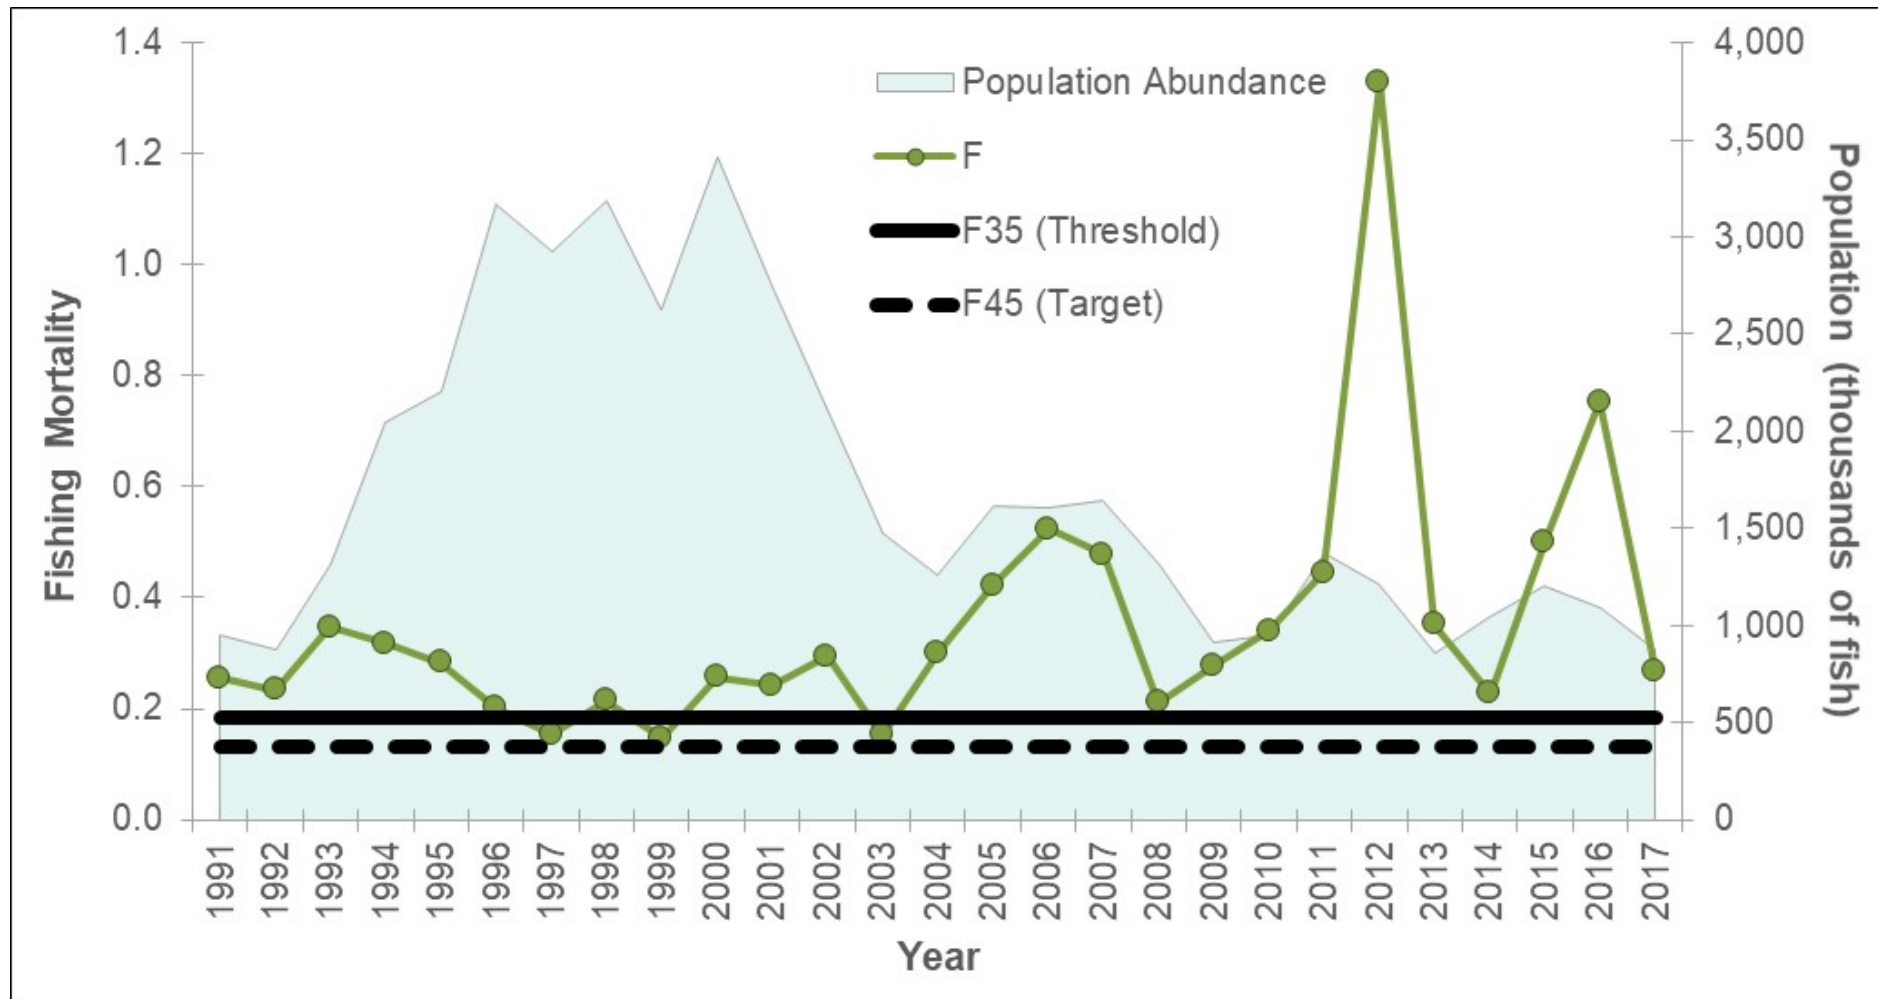

- SSB in the terminal year of the assessment is below the SSB Threshold, so the stock is overfished

Biological Reference Points		Terminal Year (2017) Estimate
SSB 45% Target	350,371 (lb)	78,576 (lb)
SSB 35% Threshold	267,390 (lb)	(Overfished)

A-R STOCK ASSESSMENT

Model—Fishing Mortality (F) & Population Abundance

A-R STOCK ASSESSMENT

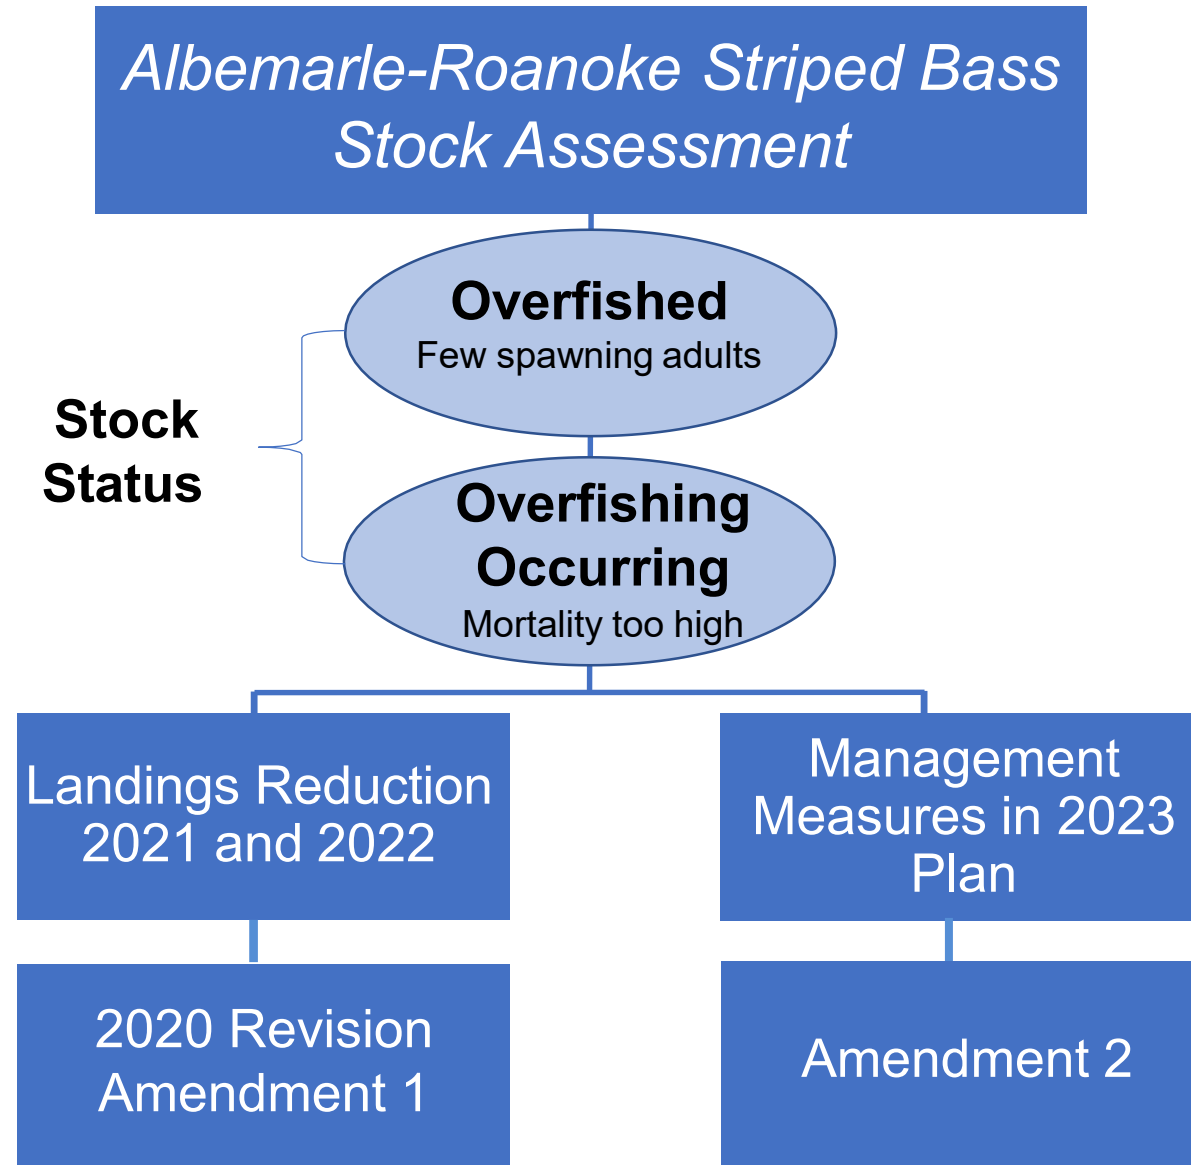

Stock Status 2017—Fishing Mortality

- Fishing mortality in the terminal year of the assessment is above the threshold, so overfishing is occurring

Biological Reference Points		Terminal Year (2017) Estimate
F 45% Target	0.13	0.27
F 35% Threshold	0.18	(Overfishing)

Amendment 1-Adaptive Management

Amendment 1—Adaptive Management

- 2020 Revision to Amendment 1 will lower the TAL in 2021 and 2022
- Based on the required reduction to lower F to the F Target
- Calculation involved reducing 2017 landings (119,244 lb) by 57%
- 2020 Revision will meet the Adaptive Management in Amendment 1 that states:

“should the target F be exceeded, then restrictive measures will be imposed to reduce F to the target level”

Amendment 1—Adaptive Management

- 2021 and 2022 TAL for the Albemarle Sound and Roanoke River Management Areas:
 - ASMA Commercial 25,608 lb
 - ASMA Recreational 12,804 lb
 - RRMA Recreational 12,804 lb
- ASMA Commercial
 - close season when TAL is reached
- ASMA Recreational
 - Evaluate creel and harvest days reduction

CAUSES FOR POPULATION DECLINE

- Poor recruitment is the primary reason for the population decline
- Many years of above-average recruitment (1993-2000) resulted in sharp increase in abundance
- Starting in 2001, several below-average recruitment years and some spawning failures (2003, 2004, 2009, 2013)
- And most recently very low recruitment in 2017, 2018, 2019, and 2020

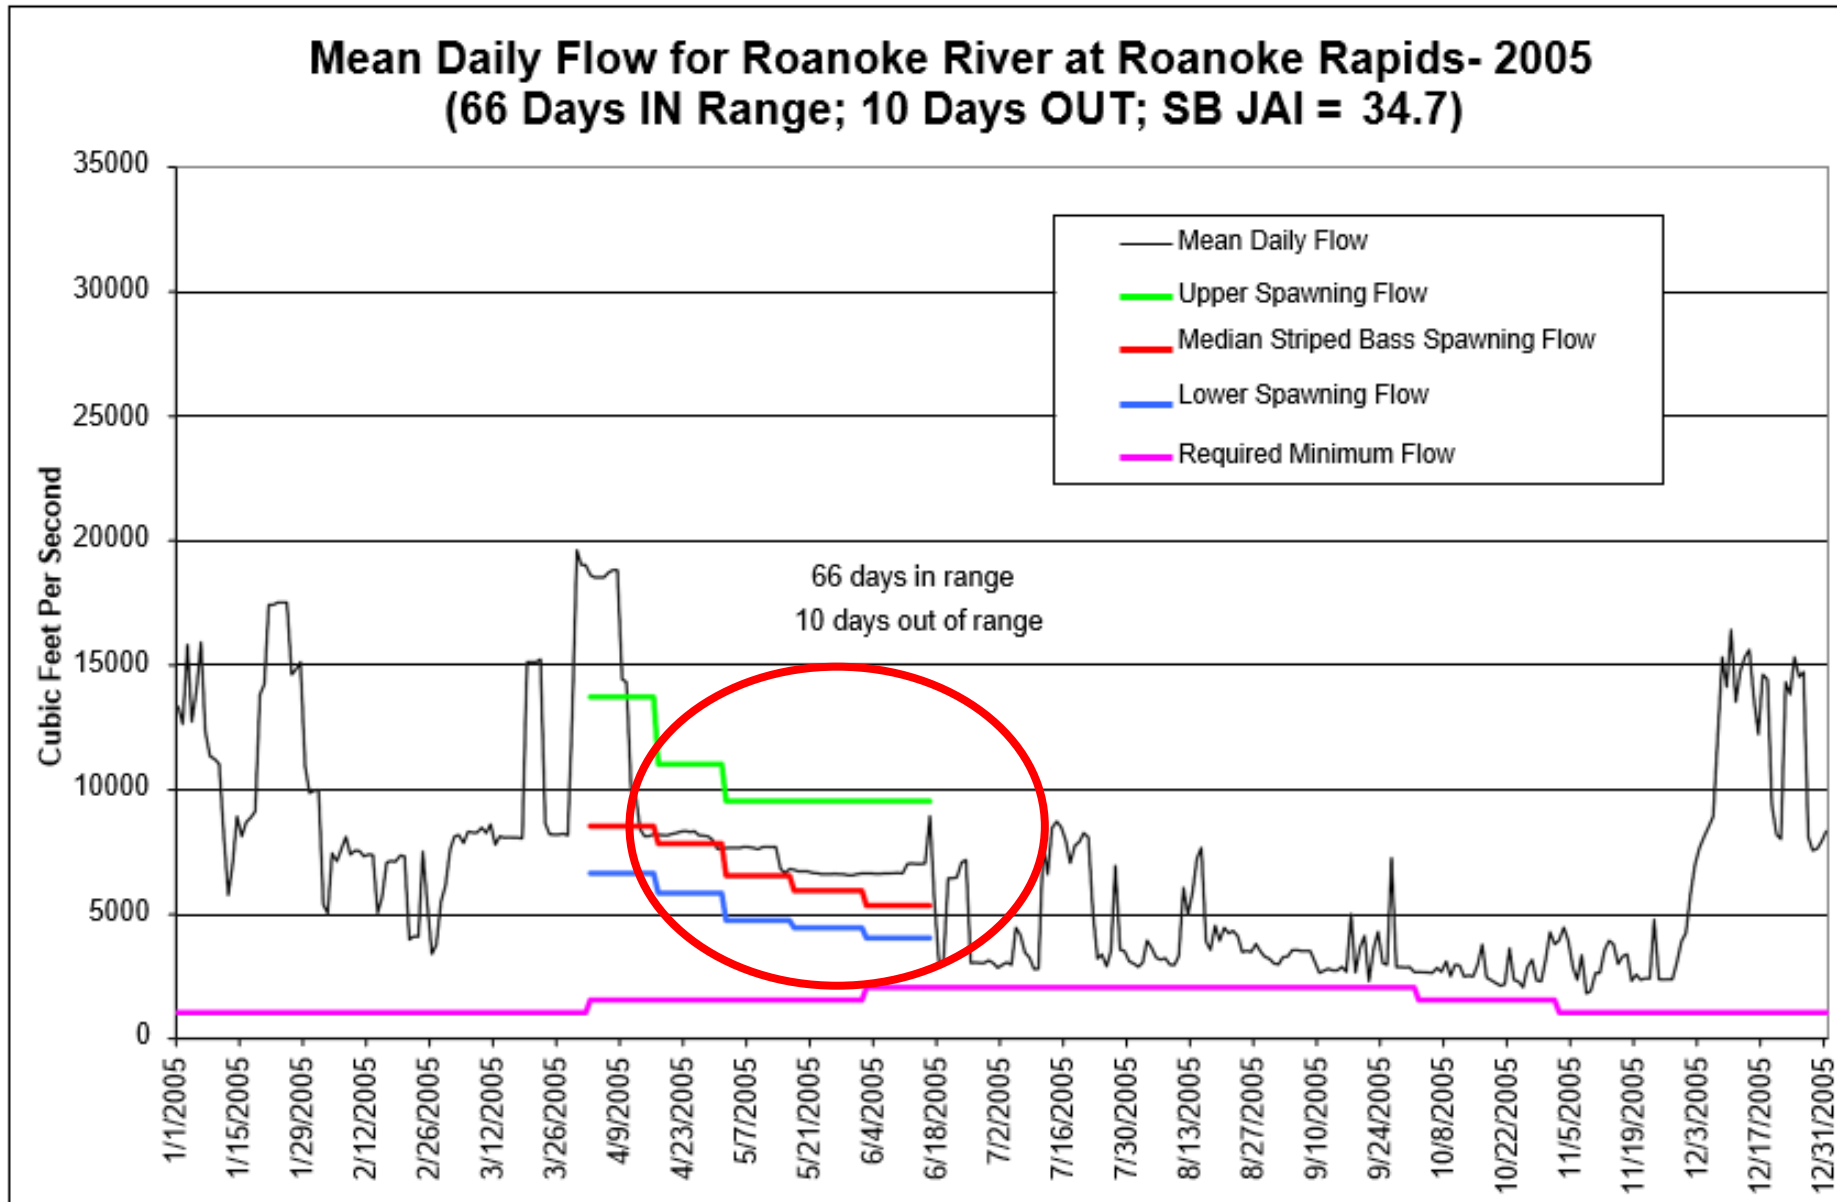

STREAM FLOW MANAGEMENT

- Roanoke Rapids and Gaston Dams
 - Dominion Energy
 - FERC License Agreement in 2004
 - No hydropeaking in spring
- John H. Kerr Dam
 - US Army Corps of Engineers
 - **Negotiated Flow Regime** provides beneficial flows for striped bass spawning
 - Flood Control up to 35,000 cfs

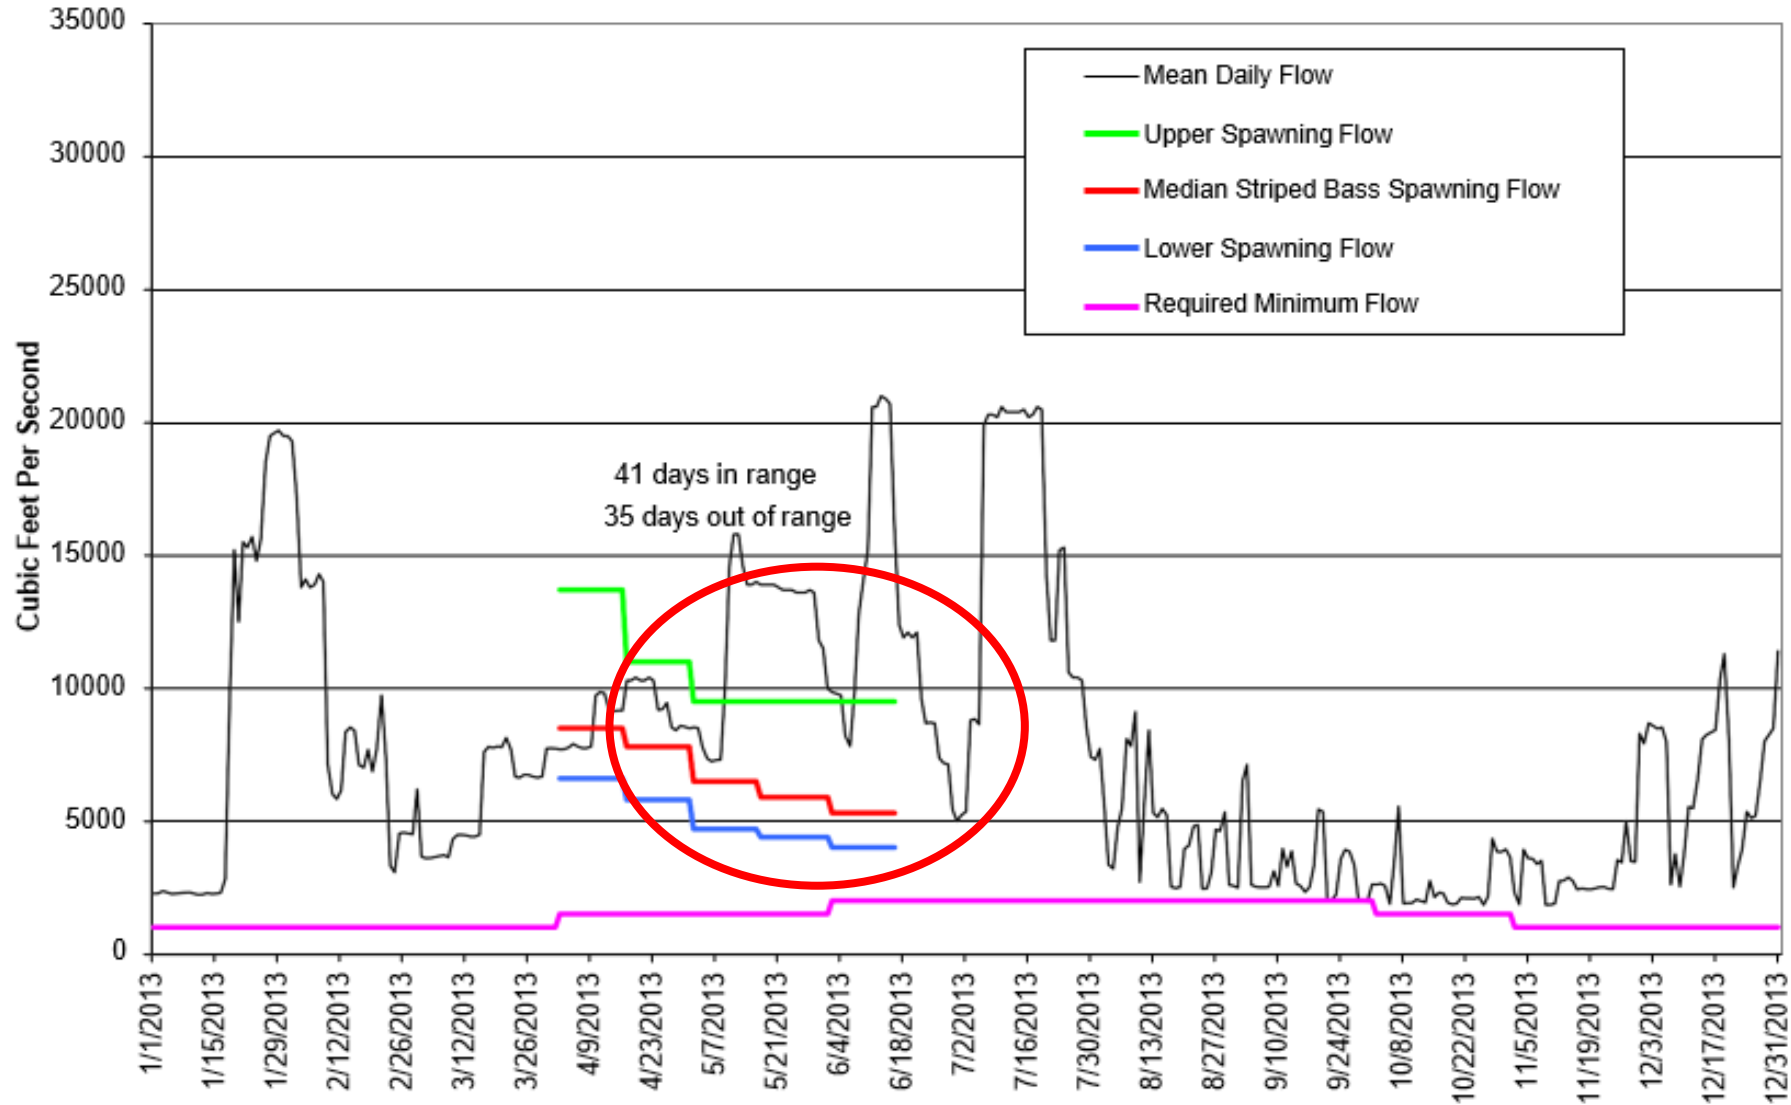

GOOD FLOW—GOOD RECRUITMENT YEAR

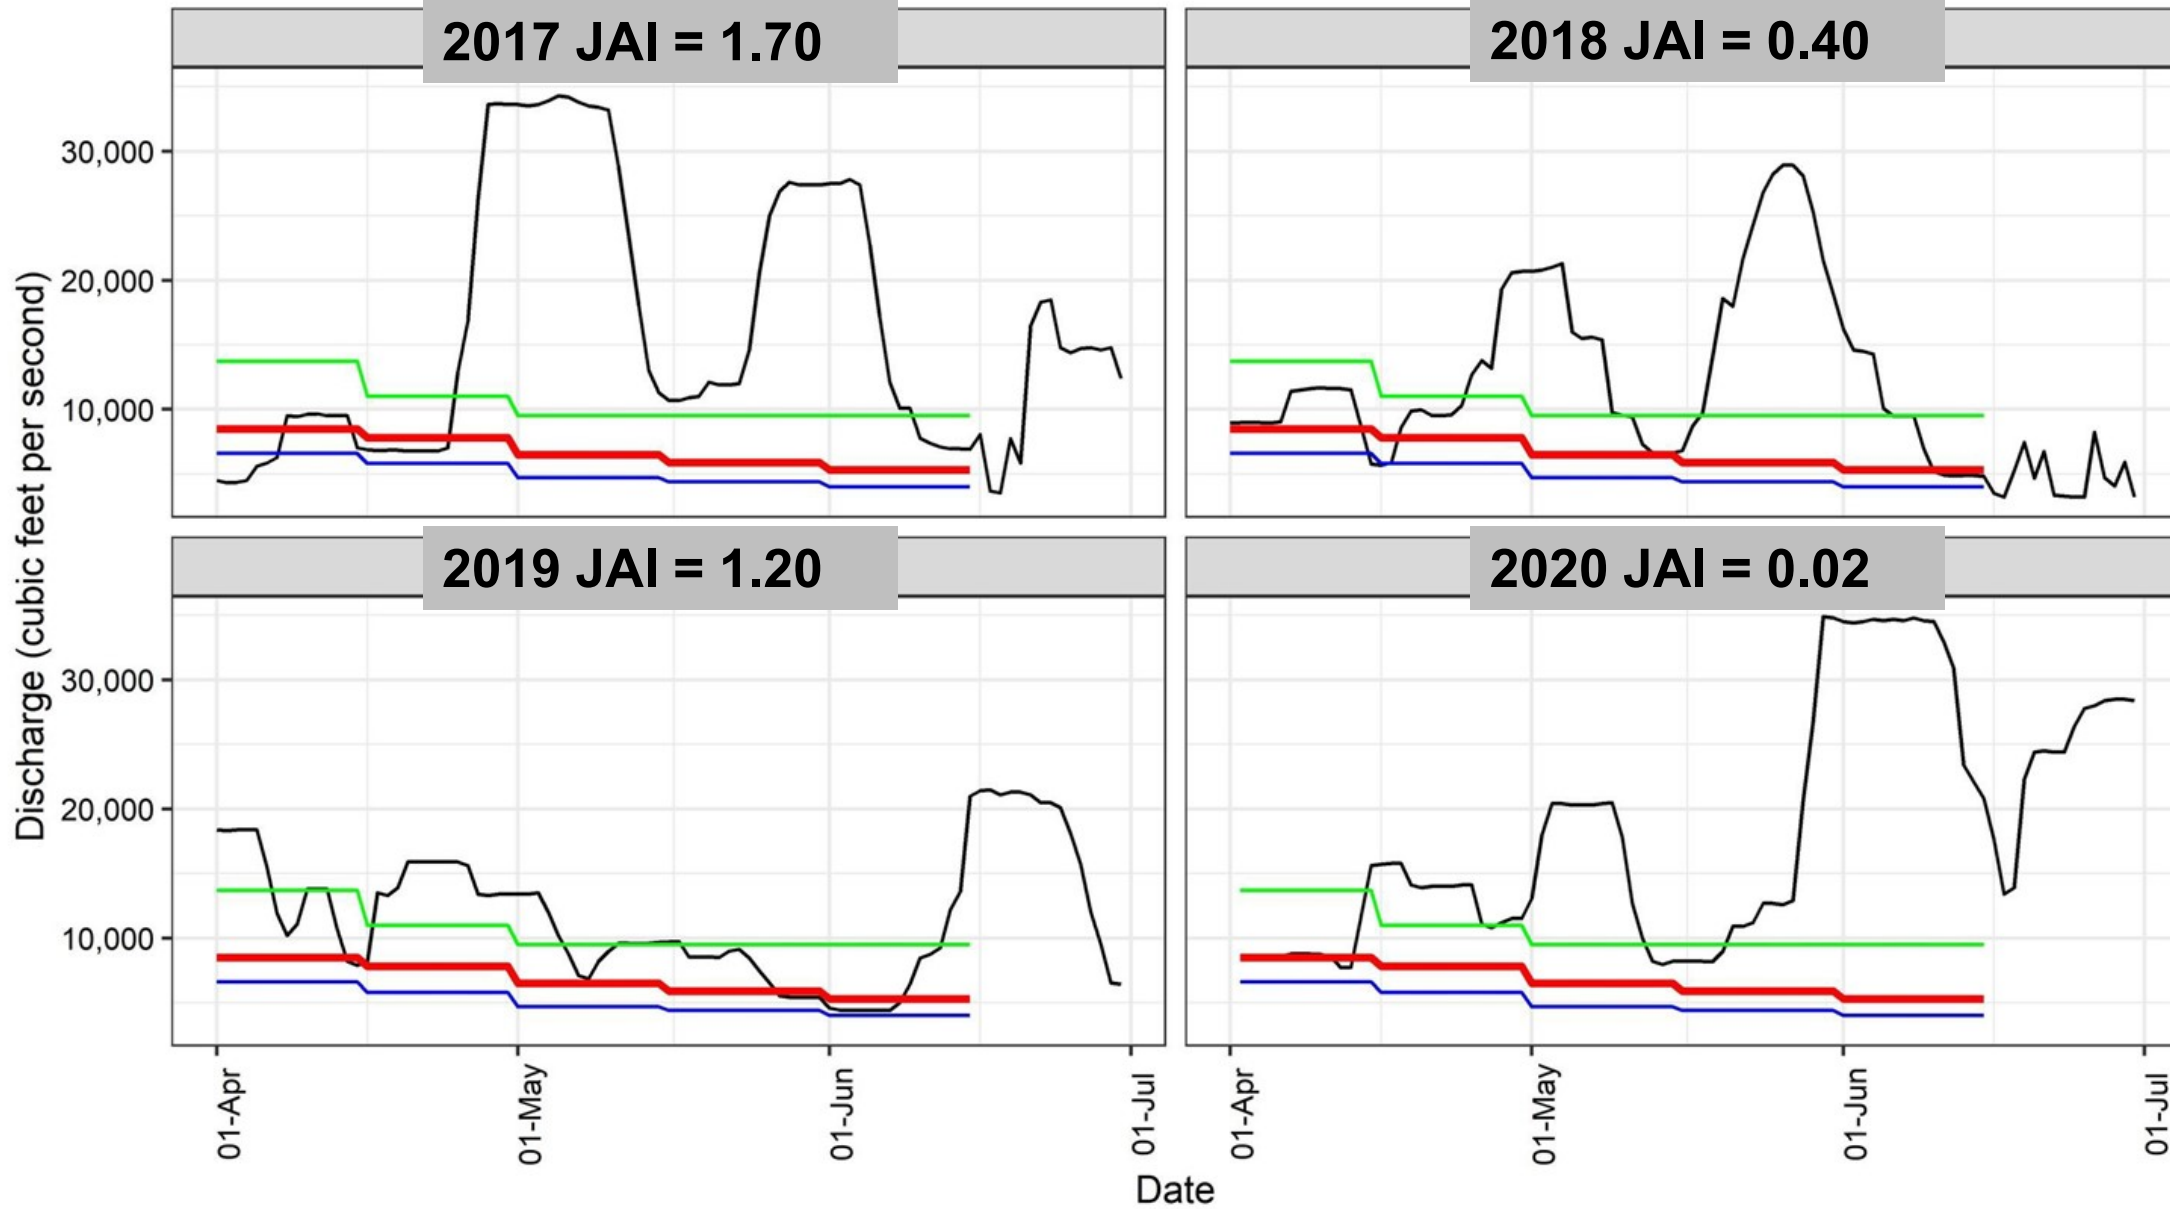

BAD FLOW—BAD RECRUITMENT YEAR

Mean Daily Flow for Roanoke River at Roanoke Rapids- 2013
(41 Days IN Range; 35 Days OUT; SB JAI = 0.57)

2017—2020; BAD FLOW—VERY LOW RECRUITMENT YEARS

2017—2020: ALL VERY LOW RECRUITMENT YEARS

NEXT STEPS IN AMENDMENT 2 DEVELOPMENT

Amendment 2

- Primary management strategy is long-term sustainable harvest
- Hot Topics page on division website
- Public scoping held Nov. 2-15 to solicit public comment
- At the February 2021 business meeting the MFC will:
 - Receive results of the scoping period
 - Vote on approval of draft goal and objectives of Amendment 2
 - Provide input on proposed strategies and any additional management strategies
