Lithology

## Geologic Cross Sections A-A', B-B' and C-C' for Mapped Sedimentary Facies on the Lucama and Kenly East 7.5-minute Quadrangles, North Carolina

KE-C-18

Simple Krig interpolation of the crystalline bedrock surface derived from project drill hole data. Cross section lines shown as well as drill hole locations. Note prominent bedrock low to the east that served as a depositional basin for much of the preserved Yorktown Formation. Bedrock high (Kenly Ridge) to the west protected much of the Yorktown from removal. Bedrock data derived from drill holes on the Middlesex, Bailey, Stancils Chapel, Lucama, Kenly West, and Kenly East 1:24,000-scale quadrangles. Graphic is oriented NE-SW.

Images of typical lithofacies encountered. Scale bar is in centimeters.
