

GIS SW Trash Mapping of Jordan Lake & Implications for Watershed-Wide Prevention

Francis DiGiano, Prof. Emeritus UNC-CH, Founder Clean Jordan Lake
Laurel Krynock, GIS Administrator, Office of University Architect,
NCSU

Presentation Outline

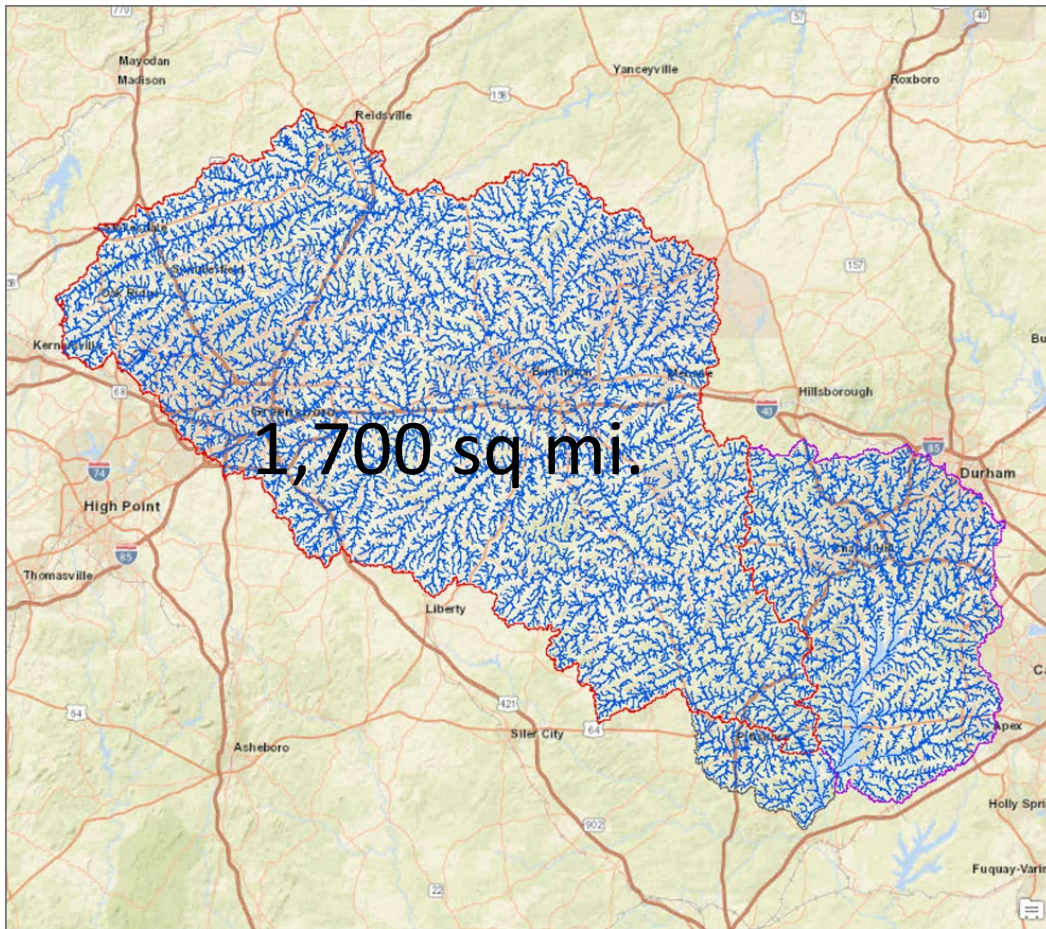

- Mission and Accomplishments of Clean Jordan Lake
- NCSU MGIST Capstone Projects: Apply GIS to Characterize Stormwater-Trash Nexus
- Phone APP to Add Trash Cleanups to GIS Mapping
- GIS Trash Mapping Tools at Clean Jordan Lake Website

Clean Jordan Lake

Incorporated in July 2009
501(c)(3) nonprofit in May 2010

MISSION

- Remove trash from shoreline to restore natural habitats and beauty
- Promote more effective trash prevention programs in watershed counties

Jordan Lake Watershed

800,000 people
6,000 mi. Highways

Major Subwatersheds
Haw River
New Hope Creek

Origins of Trash
20% Recreation
80% Stormwater

180 Miles of Shoreline

Our Accomplishments

700 Cleanups (1-200 volunteers)

9,000 Volunteers

20,000 Bags of Trash (200 tons!), 4,800 Tires

30 Miles of Shoreline Cleaned. Multiple Times

GIS Trash Map Evolution

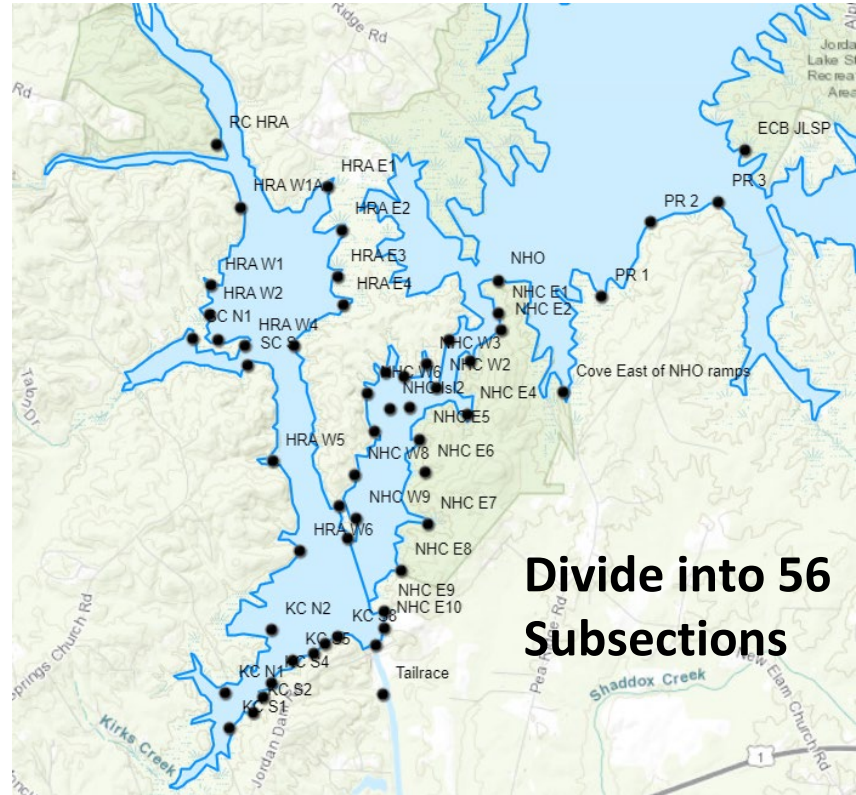

- NCSU Master of Geospatial Information Science and Technology (MGIST)
- **CAPSTONE EXPERIENCE**

Students work directly with community and industry partners to apply the knowledge and skills they have developed in the program to real-world problems. The program works closely with each student to identify an appropriate project based on our partner's needs and the interests of the individual students.
- 4 Partnerships with Clean Jordan Lake since 2018

MGIST Projects

Year	Student	Project
2018	Sue King	<ul style="list-style-type: none">- Import cleanup data from CJL spreadsheet into GIS web map- Estimate lake level rise (LLR) from inspection of USGS record of lake elevation to correlate trash load to rainfall- Hot spot analysis to investigate spatial distribution of trash
2020	Kelsey Little	<ul style="list-style-type: none">- Phone APP for cleanup data entry by volunteers- Web map incorporating estimated LLRs from Sue King
2021	Laurel Krynock	<ul style="list-style-type: none">- Improved Phone APP for cleanup data entry by volunteers- Web scraping from USGS data base for automatic detection into improved GIS map of LLRs, height and duration
2022	Ben Maxson	<ul style="list-style-type: none">- GIS mapping of DOT highway trash data- Development of Trash Threat Level Index to project trash loads

GIS Trash Mapping Location

GIS Trash Mapping Metrics

- Temporal and Spatial Impacts of Stormwater Trash
- 25 mi. Of Shoreline Divided Into 56 Subsections
- Each Subsection
 - No. Bags of Trash/100 ft
 - Pounds of Trash/100 ft
 - No. Tires/100 ft
 - No. of Cleanups
- Trash Accumulation from Stormwater Events
 - No. and Intensity of Stormwater Events Btwn Successive Cleanups at Same Subsection
 - No. and Cumulative Height of Lake Level Rises as Surrogates for Rainfall Events e.g.,
lb trash/100 ft/Lake Level Rise, lb trash/Cumulative LLR

Estimated Total Trash & Tires Per Rainfall

Number of LLRs since 1-1-14	52	
Total Bags	6,188	
Total Tires	1,089	
Bags per rainfall	104.1	
Wt. per bag	20 lb	
Wt. of trash per rainfall	1.2 tons	
Tires per rainfall	25
