**Subject:** [External] Chemours - Leak of Wastewater

Trent:

Chemours is notifying you of a spill of wastewater which occurred on November 29, 2018, that may have contained a small amount of HFPO Dimer Acid. Chemours is making this report (i) even though the incident did not result in the exceedance of any applicable reportable quantity, (ii) even though reporting is not required by any applicable permit or regulation, but (iii) in the interests of continued cooperation and transparency given DEQ's ongoing focus on the handling of HFPO Dimer Acid at the Fayetteville Works. Chemours estimates less than 1.0 lb of water containing approximately 0.000000002 lb. of HFPO Dimer Acid was spilled. Chemours has removed the soil that was possibly impacted by this release and will dispose of this soil at an out-of-state disposal facility.

The incident occurred as follows: On November 29, 2018, after weighing a waste KOH/DMSO trailer, the technician noticed a drip coming from the cap at the trailer loading line. The trailer was carried back to the loading area where the cap was removed for gasket replacement. All external valves were tightened and the drip stopped. Personnel who witnessed the leak estimate approximately one (1) pound of water was released to the ground.

Please let me know if you have any questions.
