**Subject:** flounder regs

The current regs are sturdy enough as is - I've only caught one flounder in the last three years that I could keep. Please keep the regs current. Thank you!

**Subject:** Southern Flounder

There is absolutely no scientific reason to limit the harvesting of Southern Flounder. So don't do it.

**Subject:** Fishing Rule Supplements

I would like to point out one of the most remarkable things about human beings. He have developed a method of guessing, experimenting and reassessing a situation in order to come to a logical conclusion. This is called the scientific process, and we have been using it to solve humanity's problems for thousands of years. The supplement system would allow policy makers to bypass this gemstone of our species by allowing changes in the Flounder harvest quotas to occur without evidence for doing so. Our blatant abuse of wild systems can only be curbed by being informed and deliberate in our actions. Otherwise, we are shooting a gun in a darkened room, without any idea of whom we may hit.
