Division WGS – 2\textsuperscript{nd} Scrubbing Stage

Design is a countercurrent packed tower.

- Feed only the make-up KOH as once thru liquid.
- Liquid distributor design details TBD.

- Column diameter $\sim 12\text{-}18”$
- Packed section will contain random metal packing.
- Packed height will be maximum that can be sustained within existing structure (TBD).

- Column diameter and packing type is in design stage and will depend on our final decision on metallurgy and availability of materials.
