45. *If you checked commingled, which material recovery facility (MRF) does your community use? Waste Management/Recycle America

A MRF is the plant that separates commingled recyclables into marketable commodities (paper, plastic, metals, glass)

Inbound contamination is the amount of non-recyclable materials in commingled loads delivered to the MRF.

a. Do you have a formal contract with the MRF? ☐ Yes ☒ No If yes, what month/year does it expire? 

b. Do you know your inbound contamination level at your MRF? ☐ Yes ☒ No
46. **RECYCLING TONNAGE AS A RESULT OF POLICY OR ORDINANCE**: complete this section for materials that were recycled as a result of local government ordinances or policies but that were NOT collected or managed directly by your local government recycling program. E.g. a cardboard disposal ban results in private cardboard recycling (and you have a way to track the tons collected).

**Part III. Special Waste Collections**

*Please provide responses and data as indicated below considering services provided to the public. Please do not include data on materials that were accepted and then disposed of in a landfill. Do not include materials generated exclusively by government operations (e.g. motor-fleet services). Question 47 is about materials accepted outside of any Household Hazardous Waste (HHW) Program or event. If special wastes were only accepted as a part of an HHW Program or HHW event and were not collected by separate recycling efforts then do not record materials in question #47 but instead report with HHW materials in question #48.*

Special wastes are materials collected at convenience centers, transfer stations, landfills, etc. Do not include materials collected at household hazardous waste permanent collection facilities or household hazardous waste temporary collection events.

Calculate for each truck used in your yard waste management program, and then enter the grand total volume managed by program in the appropriate boxes above.  Ex. 10 cubic yard truck x 3 days/wk x 16 wks = 480 cubic yards

\[
\text{Size of Truck (in yards)} \times \text{Avg. no. of times truck fills each week} \times \text{# of weeks truck is used during year} = \text{TOTAL cubic yards}
