

North Carolina Division of Air Quality Monthly Hazardous Air Pollutant Report

Report Date	July 30, 2015		
Data period	6/1/2015	to	6/30/2015
Prepared by	Ambient Monitoring Section		

Limits and restrictions: Every effort has been made to ensure these data are accurate. This report is for informational purposes.

2015	24-Hour Average Sample Concentration (ppbv)								Year to Date	
	Samples are collected 1 every 6 days								High	90th Percentile

Notes:

ND = not detected in sample

NS = no valid sample / data

NO = site not operating

RYTD = rolling-year-to-date

* Acetaldehyde and Formaldehyde are not monitored at all sites

***The maximum possible number of valid sample days = 61.

Blackstone site began operating in November 2013

**The white bar shows the 90th percentile value for each pollutant at each site as averaged from the previous 3 years of data and normalized to show how it compares to a 90th percentile statewide historical value (1.0 on the graph). Similarly, the black bar shows the normalized 90th percentile for the latest 3 years, including a rolling 1 year value (RYTD) for the current year's value.
