MEMORANDUM

Date: September 6, 2022

To: Lindsay Crocker, DMS Project Manager

From: Adam Spiller, Project Manager
KCI Associates of North Carolina, PA

Subject: Pond Haven Buffer Restoration Site
MY-02 Monitoring Report Comments
Tar-Pamlico River Basin CU 03020101
NCDMS Project # 100118
Contract # 7873

Please find below our responses in italics to the MY-02 Monitoring Report comments from NCDMS received on September 5, 2022, for the Pond Haven Buffer Restoration Site.

- Cover Page. Update contract number (#7873)
  KCI Response: This change has been made.
- Table 3. Replace asset table with the exact one used in the Mitigation Plan (table 1 from the Mitigation Plan). Please update for all future monitoring reports to use this table because DWR specifically asked for call outs for restoration features be listed this way in their MP comments.
  KCI Response: This change has been made.
- Reminder to KCI that any tree tubes that did not break down by MY5 must be removed as part of the close out.
  KCI Response: KCI has noted this and will removed tree tubes as necessary.
- Suggest adding a random plot or two next to fix plot #6 to demonstrate if this is an isolated area of lower density.
  KCI Response: Plot R4 will be placed near Plot F6 in MY03 to check the density and species composition of this area.
- Site visit on 9/2 showed some sweetgum areas were discussed in the field for possibly needing treatment on the north side of T1.
  KCI Response: KCI is planning to treat these areas in either fall 2022 or spring 2023.

Please contact me if you have any questions or would like clarification concerning these responses.

Sincerely,

Adam Spiller
Project Manager

Appendix C – Vegetation Plot Data

PROJECT SUMMARY

The Pond Haven Buffer Restoration Site (PHBRS) was completed in early 2021 and restored a total of 738,372 square feet of riparian buffer along stream in the Bollens and Johnson Creeks Watershed of the Tar-Pamlico River Basin (HUC 03020101010060). The buffers at this site have been historically cleared for pasture and impacted by cattle and other anthropogenic impacts. Prior to restoration, the site was an active cattle pasture that supported approximately 150 head. Tributary 1 had some existing buffer along the stream banks, which cattle had access to. Tributaries 2 and 3 were completely devoid of buffer, while Tributary 4 had some buffer along the stream banks that the cattle were excluded from. The completed project will return a functional riparian buffer to previously unbuffered and cattle impacted streams. All project assets are based on the surveyed conservation easement and top of bank.

The PHBRS is protected by a 17.49 acre permanent conservation easement, held by the State of North Carolina. It is located in central Granville County, approximately three miles northeast of Creedmoor, North Carolina. Specifically, the site is on the west side of NC-96, just south of Cannady Road. The center of the site is at approximately 36.1591 N and -78.5954 W in the Wilton USGS Quadrangle.

The mitigation work at the PHBRS was completed on February 27, 2021. This work included chemical control of pasture grasses and other non-native or invasive species. Disking was used in areas of fescue or other allelopathic plants. Cattle exclusion fencing was erected around the entire easement boundary and 11,900 bare root seedlings were planted across the site with a 4' Tubex Treeshelter and a VisPore Weedmat fitted on every other tree. See Table 3 for a complete list of the species planted on site. A custom herbaceous seed mix composed of native species was spread across the site. Finally the site boundary was marked with visible signs conforming to DMS and DEQ Stewardship standards.

MONITORING PLAN

Monitoring will be conducted for a period of five years following project implementation or until performance standards have been achieved. Monitoring will consist of vegetation sampling and visual inspection to ensure the health and vigor of the planted restoration area and that the requirements of the conservation easement are being upheld. Vegetation sampling will consist of fifteen 10m x 10m plots. Eight of these plots were permanently installed during the baseline monitoring, while the other seven will be randomly placed during each monitoring visit. The species, height, and origin (planted vs. volunteer) of all trees within these plots will be recorded each year, and a photograph will be taken of each plot. Invasive stems will be recorded in each plot but will not count towards reaching performance standards.

SUCCESS CRITERIA

Plots must achieve an average stem density of 260 stems/acre after five years with a minimum of four native hardwood tree species or four native hardwood tree and native shrub species, where no one species is greater than 50 percent of stems. Native hardwood and native shrub volunteer species may be included to meet the final performance standard of 260 stems/acre upon DWR approval.

ANNUAL MONITORING

Monitoring Year 2 vegetation data was collected on June 27th and 29th of 2022. 14 of the 15 vegetation monitoring plots had greater than 260 stems/acre, with only Plot 6F (243 stems/acre) below the density requirement. Plot 6F (3 species) was also the only plot with less than four native hardwood species. Overall, the site is well vegetated with extensive herbaceous coverage and many diverse volunteer woody species.

1). Bolded species are proposed for the current monitoring year, italicized species are not approved, and a regular font indicates that the species has been approved.
2). The "Species Included in Approved Mitigation Plan" section contains only those species that were included in the original approved mitigation plan. The "Post Mitigation Plan Species" section includes species that are being proposed through a mitigation plan addendum for the current monitoring year (bold plan addendum (regular font), and species that are not approved (italicized).
3). The "Mitigation Plan Performance Standard" section is derived only from stems included in the original mitigation plan, whereas the "Post Mitigation Plan Performance Standard" includes data from mitigation plan approved, post mitigation plan approved, and proposed stems.
4). Green = acheived success criteria. Red = did not acheive success criteria
