

1 Draft EJ Report

The draft EJ Report is an initial look at the demographics and socioeconomics of a facility's surrounding community area. This includes information within a radius determined by the North Carolina Department of Environmental Quality (Department or DEQ), race and ethnicity (decennial census year), poverty status, per capita income, and ability to speak English (most current American Community Survey (ACS) census range), the current North Carolina Department of Commerce county tier, and presence of Native American territory. The draft EJ Report does not include a reconnaissance of the community.

A draft EJ report will be conducted at the beginning of the permit application process when requested by the appropriate Division Director. This will be distributed to interested community members (if known) and posted to the DEQ website with the relevant permit application before the close of the public comment period. The primary goal is to encourage EJ Report comments and suggestions from the surrounding community, industry, and environmental groups throughout the comment period.

It is important to keep in mind, that based on the data available, the following limitations of this study exist: census data is from 2010 and may be outdated; the more recent American Community Survey data through 2018 are estimates; the U.S. EPA's EJSCREEN does not provide all of the data categories that were used in this analysis so the census tract and county data cannot be compared to the radius evaluating the facility boundary; census tracts can be large areas that do not identify exact locations of each population.

The Department has assessed an overview of the demographic and socioeconomic data of the communities surrounding the proposed Align RNG, LLC facility to foster communication prior to the Division of Air Quality's final action on the permit application.

2 Environmental Justice Evaluation

Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies (US EPA). This evaluation examines the demographic and environmental conditions in Sampson and Duplin Counties, as well as census tracts 903 and 9701, and the one-mile buffer around the property boundary of the proposed Align RNG, LLC facility. Finally, the demographics of the entire state of North Carolina are also considered as they compare to both the county and local census tract and radius settings.

The Department has assessed the permit application and the potential impact on communities surrounding the facility as proposed in the permit application. Accordingly, the draft Environmental Justice Report will include:

- Overview of the permit application submitted by Align RNG, LLC
- Study of area demographics [determined by utilizing the US EPA Environmental Justice tool (EJSCREEN) <https://ejscreen.epa.gov/mapper/> and current, available census data. <http://factfinder.census.gov/faces/nav/jsf/pages/index.xhtml>
- Comparison of local area demographics to both county and statewide census data
- County health assessment
- Surrounding sensitive receptors
- Local industrial sites (using the NCDEQ Community Mapping System <https://ncdenr.maps.arcgis.com/apps/webappviewer/index.html?id=1eb0fbe2bcfb4cccb3cc212af8a0b8c8>).

Demographics (including race and ethnicity, poverty status, and per capita incomes) for Sampson and Duplin counties will be compared to the local (census tracts and project radius) level data to identify any disparities surrounding the project area. Using standard environmental justice guidelines from the EPA and National Environmental Policy Act (NEPA) documentation, the following conditions will be flagged as potential communities of concern:

- 10% or more in comparison to the county or state average
- 50% or more minority
- 5% or more in comparison to the county or state average for poverty

3 Proposed Project

Align RNG, LLC submitted a permit application for a proposed facility in Duplin County, North Carolina. This application is for a new facility which would receive biogas produced in anaerobic digesters at various independently-owned and operated hog farms located in Duplin and Sampson counties. The projected amount of biogas production has been calculated using other similar anaerobic digesters in North Carolina that use hog manure as the sole feedstock. The biogas (raw material) will be dried using biogas dehydration and compression systems (and a glycol chiller system) at each farm (roughly 19 total) and transported through a new low-pressure biogas pipeline to the BF Grady Road facility. This permit application is solely for the proposed facility, not the gathering lines (low-pressure biogas) or the Piedmont Natural Gas pipeline. Therefore, this draft Environmental Justice Report considers only the immediate area surrounding the facility in its analysis.

The non-methane constituents of the biogas, referred to as tail gas, will be scrubbed for hydrogen sulfide (H₂S) using an iron sponge system (two iron sponge scrubbers, CD-1 and CD-2), followed by one enclosed hybrid flare (CD-3). During facility start-up and when the product gas does not meet natural gas pipeline specifications, the candlestick flare (CD-4) will be utilized to burn (oxidize or destroy) the air emissions. See Table 1. below for a description of actual and potential emissions at this facility, as of May 16, 2020¹.

The Align RNG, LLC facility will treat biogas gathered from surrounding agricultural operations and inject the treated gas to the Piedmont Natural Gas pipeline for offsite consumption. The biogas will be supplied from agricultural operations that have previously used open air lagoons for waste management. Emissions of gases such as methane from open air lagoons will now be reduced through the use of a digester. The gases produced in the digester will be routed to the Align RNG, LLC facility, thereby reducing the emissions of such gases from the lagoons.

Table 1. Actual and Potential Emissions

Pollutant	Actual (tons/year)	Potential to Emit (tons/year)
CO	10.10	17.39
NO _x	4.83	6.54
PM(TSP)	0.07	0.14
PM(10)	0.07	0.14
PM(2.5)	0.06	0.12
SO₂	47-50 projected	193.24
VOC	0.76	1.53

¹ These are subject to change throughout the permitting process before any final action is taken by DEQ.

		Margin of Error +/-	*****

5 Limited English Proficiency (LEP)

Per the Safe Harbor Guidelines, should an LEP Group be identified during the permit application process, written translations of vital documents for each eligible LEP language group that constitutes five percent or includes 1,000 members (whichever is less) of the population of persons eligible to be served or likely to be affected or encountered. If there are fewer than 50 persons in a language group that reaches the five percent trigger, then DEQ will not translate vital written materials, but instead will provide written notice in the primary language of the LEP language group of the right to receive competent oral interpretation of those written materials, free of cost. The safe harbor provisions apply to the translation of written documents only. Safe harbor guidelines are per the EPA guidance for LEP persons, and implemented by DEQ when deemed appropriate. The population of Spanish-speakers that speak English “less than very well” is greater than 5% in both census tracts included in the buffer.

Table 7. Limited English Proficiency

Language Spoken at Home	Census Tract 903, Duplin County		Census Tract 9701, Sampson County	
	Estimate	Margin of Error	Estimate	Margin of Error
Total:	4,685	394	6,755	635
Speak only English	4,206	387	5,352	507
Spanish or Spanish Creole:	461	248	1396	454
Speak English "very well"	173	110	539	196
Speak English less than "very well"	288	204	857	336

6 County Health

The University of Wisconsin Population Health Institute, in collaboration with the Robert Wood Johnson Foundation, calculated a County Health Rankings system for all the States in the United States (www.countyhealthrankings.org). This ranking is based on health outcomes (such as lifespan and self-reported health status) and health factors (such as environmental, social and economic conditions). According to this 2020 report, out of all 100 counties in North Carolina (with 1 indicating the healthiest), Sampson County ranks 82th in health factors and 77th in health outcomes. Duplin County ranks 87st in health factors and 56st in health outcomes.

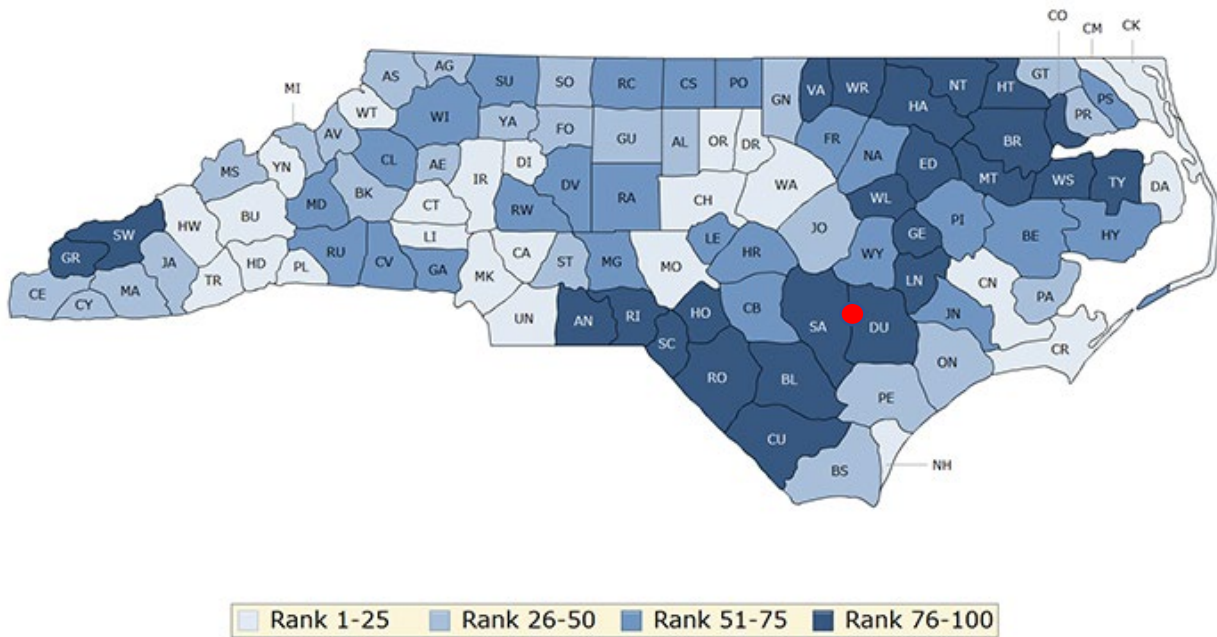

Figure 3. County Health Rankings for Health Factors in North Carolina provided by University of Wisconsin Public Health Institute.

7 Local Sensitive Receptors

The Environmental Protection Agency suggests that sensitive receptors include, but are not limited to, hospitals, schools, daycare facilities, elderly housing and convalescent facilities. These are areas where the occupants are more susceptible to the adverse effects of exposure to toxic chemicals, pesticides, and other pollutants. Extra care must be taken when dealing with contaminants and pollutants in close proximity to areas recognized as sensitive receptors. For instance, children and the elderly may have a higher risk of developing asthma from elevated levels of certain air pollutants than a healthy individual aged between 18 and 64.

Within the one-mile project radius from the Align RNG, LLC proposed facility, the following potential sensitive receptors were identified through EJSCREEN and Google Maps.

- First Baptist Church

Near the project location (outside radius), these potential sensitive receptors were identified (Figure 4):

- House of Prayer Church
- Duplin County Renaissance Center

Additional sensitive receptors may be identified during the permit application process, such as during the field reconnaissance visit or through public comment.

Figure 4. Sensitive receptors surrounding Align RNG, LLC facility

8 Local Industrial Sites

Within the one-mile buffer, there are 16 facility permits or incident reports (as of April 9, 2020):

- 3 NPDES Stormwater Permits
- 1 Solid Waste Septage Site
- 3 Underground Storage Tank Incidents
- 4 Above Ground Storage Tanks Incidents
- 5 Underground Storage Tank Active Facilities
- 1 Land Use Restriction and/or Notices

Figure 5. Permitted facilities and incidents with the one-mile radius surrounding the Align RNG, LLC facility

9. Conclusion

The draft EJ Report is an initial evaluation of the demographics and socioeconomics of the community area surrounding a proposed facility or permit modification. This includes information within a determined radius by the Department (one mile for this project) on race and ethnicity (decennial census year), poverty, per capita income, and ability to speak English (most current ACS census range), current NC Commerce county tier, and presence or absence of American Indian Tribal areas. The draft EJ Report does not include a reconnaissance of the community. The proposed Align RNG, LLC facility is in an area designated with moderate health factors and outcomes in comparison to other areas of the State.

The study area displays higher percentages of African-American and Hispanic residents compared to the state, and in some cases, the county as well. The study area also exhibits higher poverty levels than the state, and the county in some instances. One potential LEP language group (Spanish) was identified that does reach the 5% threshold for Safe Harbor Guidelines. Extra attention will also be given to ensure language data is accurate and translation or interpretation will be considered for essential documents and any public hearings or meetings. Finally, the list of sensitive receptors will be consulted while considering additional outreach options that may best fit this community's needs.
