Dear Coal Ash Comment Administrator North Carolina DEQ,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Erin Malec
601 West Rosemary Street

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

When Hurricane Florence dumped 30+ inches of rain inland, hog lagoons, sewage, dead chickens, and coal ash floated downstream to pollute coastal waters. An aerial photo showed a black plume of sludge streaming out Beaufort Inlet. Keep the pollution away from Beaufort. We couldn't swim, nor let our pets in the water, and we couldn't eat seafood. DEQ should set toxic rate limits for Coal Ash at the level that really kills fish. And contain Coal Ash away from water.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Ralph Warner

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. They should do this I'm mediately.

Regards,
Viv Graves

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I'll write my own statement instead of the automated response, because I'd like to highlight a few issues surrounding this, aside from the obvious.

Firstly I'd like to say that it is obscene that we 'have' to bring this up and it is not being made a mandatory task. The North Carolina Utilities Commission has disgraced itself by allowing a business to front the bill of their problems, their mishandlings, and their carelessness to its consumers. We did not tell Duke Energy not to maintain their operations. We did not ask them to confront the NCUC and demand we pay for their screwups. The only thing we have done is pay our bills accordingly. I don't understand how a company receives a tax break greater than the suggested amount for cleanup, and has an increase in net worths and somehow our gatekeepers at the NCUC believes we should front the bill. Its ridiculous. Now, they still have multiple sites that are under question and we 'have' to make a big deal out of this instead of it being mandatory. What is everyone going to do? Wait until we have another major contamination, and once again just front the bill to the people not responsible? How much more does the public have to pay for a million dollar companies' mishandlings? DEQ members, don't be another let down to this state, we've already been shown disappointment once from the NCUC, we don't need another group following suit.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Dennis Laws
178 Pleasant View Dr

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Remove and safely store all coal ash from all sites at the expense of Duke Energy and not consumers.

Regards,
Gary Clontz
79 Vista Dr
Clyde, NC 28721

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I request that Duke remove the coal ash from the Marshall Steam Plant along with the other locations that they are currently operating! It is horrible that they have been allowed to pollute our beautiful waterways and land for decades!!! If the North Carolina State cares at all about it's citizens it will get Duke to clean up the mess!

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Luke Ruggieri

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

Living in one of the coves that the coal ash / sediment has spread into. It's extremely important to me and my family that this gets cleaned up. I also feel that the our county knows more than what they have to done to protect us. We have supporting evidence that NCDEQ, DEQ and Iredell County has let things slip through the cracks.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
LeeAnn Christie

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I went to the first meeting tonight at Walnut Cove Elementary. The meeting design was not conducive for citizens to be heard. The poster set up did not encourage dialogue and I was not able to speak to any of the experts at each poster. My voice was not heard. I hope DEQ and NC will hear this email loud and clear.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I attended the session tonight at Walnut Cove. I was tremendously disappointed in the format as no one other than the presenter had an opportunity to speak or provide input. The format for the other sessions should be changed to give those who attend an opportunity to speak.

I have studied the coal ash issue, and I strongly feel that the North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Currently, Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not cover-up!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

We moved here from Ohio for a better quality of life for our children, we need to live in a safe, clean environment and it is Duke Energy's responsibility to provide that in the area that so many of us live in around their plants and on the Lake. It is crazy to me to even fathom that a company would not clean up their toxic mess that they have created. Where is the conscience and accountability? I pray that you hear the pleas of the community and rectify this.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Duke needs to clean up their mess. As it is we can't eat fish out of the lake and many people can not use their wells. How can they get away with this? They have the money to handle their waste correctly.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Sue Camden-Lee

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater!

We moved to Mooresville just over 3 years ago and had no idea about the environmental conditions here! Since then we have watched friends and countless community members become unexplainably sick - some teenagers and younger! Our rates of cancer in this area are higher than “average.” This is not a coincidence!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we’re concerned about pollution from Duke Energy’s coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Please **DO SOMETHING** to help our community and keep us safe!!

I will be traveling on January 29th, and cannot attend the meeting, but need my voice to be heard regarding the proposed cap in place approach.

Regarding coal ash and cleaning up this toxic waste: please consider the ongoing and **long term costs, in some cases irreversible**, to the health of our citizens, wildlife and environment.

The ground water seepage from cap in place, which will continue to take place with the proposed “fix”, and the potential for natural disasters make the existing locations of coal ash pits a disaster waiting to happen, **as we have seen**. The cost associated with these disasters far outweigh the upfront cost to remove ash to a secure, lined site.

Best practices are known and have been implemented in other states. Removing the ash to a secure, lined location, where natural disasters can be withstood needs to be implemented quickly, before the next spill occurs.

Nothing good has come from years of deliberation. We need a remedy, not a short term “fix”.

Sincerely,
Judy Breault

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
David Reynolds

Duke should be made to clean up their coal ash mess and not by passing the costs onto customers. Coal ash left behind seeps into and poisons our ground water and with climate change we are only going to see more events like happened with Florence, where it ends up in our water sources. It needs to be completely removed at Duke's expense. They can take the cost from shareholders and executive salaries and bonuses. There is a lot of money there

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
William Ball

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I am a resident of Mooresville, NC on Lake Norman. I currently serve on the Board of Directors of the Catawba Riverkeeper Foundation (CRF) and served for several years recently as the Board Chairperson. CRF is submitting its own comments; these are my own.

For the bulk of my career I was on the corporate headquarters staff of Northeast Utilities, so I am not your typical anti-utility environmentalist and I brought that balanced perspective to CRF. I've always felt that Duke Energy was a well-run company and have never given a second thought to the fact that our house is less than 6 miles from Duke's McGuire Nuclear Power Plant.

But we do have to wonder why Duke would advocate leaving its unlined, ground/surface water-polluting coal ash dump at its Marshall coal-burning plant on the banks of Lake Norman. True, they propose capping it with an impermeable layer that would theoretically prevent water from leaching toxic chemicals from the coal ash into nearby waters. That's a risky proposition particularly given the use of Lake Norman and numerous points downstream on the Catawba River and its impoundments for drinking water, including the City of Charlotte.

Let's not forget that it wasn't that long ago that Duke experienced a major fiasco at its Dan River coal-burning plant. There the collapse of a 48" drain pipe underneath the coal ash dump resulted in 39,000 tons of coal ash and 27 million gallons of polluted ash pond water flowing into the Dan River. This was the third largest coal ash incident in the US and resulted in fines and restitution of \$102 million after Duke pled guilty to nine charges of criminal negligence under the Federal Clean Water Act, the largest federal criminal fine in North Carolina history.

So, Duke has a less than stellar track record dealing with coal ash.

Duke is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina. Yet, over the course of recent months Duke has suggested that its so-called cap-in-place solution at Marshall would alleviate the need to overcrowd Rt. 150 and other roads with a never-ending caravan of dump truck loads of coal ash headed to a proper geologic location and a modern engineered landfill. I suspect that nearby residents would much prefer to endure the traffic inconvenience than continuing water pollution from coal ash at Marshall or, worse yet, another Dan River fiasco. By the way why not move the coal ash out the same way the coal comes in...by rail?

Incidentally, Duke prides itself on recycling coal ash at other sites into environmentally harmless cementitious building products. Shouldn't at least partial recycling of coal ash at Marshall be pursued?

It's pretty clear why Duke wants to cap-in-place at Marshall...because it's the least costly option. That might be good for Duke ratepayers and shareholders, but not for the protection of water resources of the many communities around Lake Norman and downstream, including Charlotte drinking water customers.

If Duke doesn't offer to do the right thing the North Carolina Department of Environmental Quality (DEQ) should require Duke to either recycle or remove its coal ash from its leaking, unlined dumps on the banks of Lake Norman and move it to dry lined properly engineered storage at a suitable geologic location isolated from irreplaceable ground/surface water resources.

Respectfully submitted,
Ron Pfeffer
Mooresville, NC

Regards,
Ron Pfeffer

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Amanda Boyea

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

AS a Resident on Mayo Lake since 1990 when my parents built the house I live in now, we have enjoyed the recreational fishing, swimming and boating that the beautiful lake offers. My family and friends have visited the cove where the overflow creek dumps its coal ash tainted waters. We did NOT know exactly what we were looking at for years, only noticing that the cove near the plant had a milky tint to it and curious plant growth. As Google Earth evolved, I was able to see where the outflow was actually generated,,,,, the coal ash collection pond! You can see for yourself where the Ash Pond flows out into the cove I mention. The other interesting satallite image of 12/2002 shows clearly the milky water tint in the cove. I certainly fear for the danger I have subjected my children, family and friends to as I look at this image. I do hope that this plant and Coal ash are shut down and cleaned up as soon as possible to prevent further damage to this incredible resource. I just hope it isn't too late.

Please see the Google Earth Shot above from the Mayo Plant and note the cove I mention. You can clearly see the milky tinted water coming from the creek on the other side of the tracks where the Ash Pond is located.

Look at it for Yourself on Google Earth and be sure to drag the date bar to 2002.

(I can't attach the screen shot of Google Earth showing the cove with the date stamp 12/2002. I will try again to send to you so you can see clearly.)

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Susan Showers

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Carol Morrow
151 Monarch Rd
Hendersonville, NC 28739

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

When Duke Power Co. started spreading coal ash around the Marshall Steam Station decades ago, the land used had numerous creeks, gullies, and drainage channels all leading into the Catawba River, which became Lake Norman after construction of the Cowans Ford Dam. Now that topography is nothing but a level forested woodland, with layer upon layer of coal ash obliterating the original landscape. But the water percolating through the ash layers still follows the old paths, only now laden with a toxic stew of heavy metals and other pollutants, all seeping slowly into Lake Norman. Duke Energy is slowly poisoning the lake and the groundwater, silently and stealthy, now and for all eternity unless the coal ash is removed.

You have a duty to protect the health and welfare of the citizens of this great state and you must compel Duke Energy to dig up the coal ash and store it in a safe location where it can do no more harm to our citizens and our environment.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

Clean water is at the core of a healthy existence for all of us. In a world with lots of opinions, this is something I believe we can all agree about.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina. Do the right thing at these sites as well.

There is always a cost to doing things “right”. In this case, the cost to doing it wrong could be much more significant.

Respectfully,

Marsha G LePew

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Jan Slaven
6411 Amos Smith Rd

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways.

I currently live on the beautiful shores of Lake Norman across from Marshall Station. I look at the billowing smoke everyday.

We fulfilled a lifelong dream by purchasing an old lake cabin and making it our home for us and our 3 young kids. Our kids and us fish, swim, and enjoy Lake activities all Summer. We have a well water that draws water from the natural water table around the Lake. I work and live here, I hope to retire here and pass this on to my kids.

2017 Duke had 10.8 BILLION in gross revenue, 3 BILLION NET INCOME. The CEO was paid 21.4 Million dollar Salary.

Duke Energy wants to just cap in place a leaking and potentially catastrophic accident waiting to happen unlined Coal Ash pit directly on the shores of LKN. At minimum Duke should be moving all Coal Ash adjacent to the Waters of LKN to a Lined and Capped storage that will be safe for all of us.

This really should not be up for debate. They put this cost

For moving coal as to line out at 387

Million. Nothing compared

To their Billions in profit. Even doing the right thing by removing all the coal ash to lined storage, they put cost at 1 billion. Only a fraction of 1 years profits.

Who is accountable here? Who is accountable for the damage already done? Do we wait until another Dan River happens here?

How does their right to rake in billions in profits, become

More important than the Health and well being Everyone around these toxic waste pits?

You are trading Duke profits for the Lives and Health of us and Our Children and all generations that come after!

Please make them accountable or it's on you, and you become the Failure for Now and the Future!

Thanks for reading

Wade Spraberry

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Karen Iverson

To Whom It May Concern ,

Please , Please help us in the efforts of the right thing for the Environment and the People of Lake Norman Area and All over NC.

The fact that we are in 2019 and we know this Coal Ash is a disaster to the Environment and the People. Thyroid Cancer or any other Health Risk is NCDENR's responsibility to get cleaned up

We ask you to make a clear message to Duke Energy . Clean it up . Haul the waste off to a unpopulated area outside of NC . Start Now and Fines should be immediately implemented

No Coal Ash should be left in NC .

Why in the world are US Companies Importing Millions of Tons of Coal Ash from India and Shipping across the Oceans . Apparently we have more than enough in NC alone .

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Janet Bowen

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

Listen folks,

I know y'all love North Carolina as much as I do. No two ways about it: we won the lottery just being here.

Don't you want your children to feel that way? If we pollute the water now, we're making our beloved home state into the next New Jersey or Michigan: a national joke.

Do you want postcards with fish wearing scuba gear like they got around Lake Michigan? Do you want rivers that catch fire like they got around Cleveland?

It's our responsibility to the property owners (our children) to maximize the value of the property. Anything less is gross mismanagement.

Feel free to contact me at any time if you have questions or concerns.

Sincerely,
Joshua William Booth
Property Manager
Free State of North Carolina

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Christine Lindley
1514 Independence Road
Greensboro, NC 27408

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
April Goral
5364 New Centre Dr

Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Dear Governor Cooper and our state's Dept. of Environmental Quality:

I write as a proud Carolinian, mother, teacher, volunteer, writer and photographer to ask why our state would allow Duke Energy to continue to release its coal ash into our waters and soil. Duke is already guilty of the largest criminal fine in NC history with its third largest coal ash incident in our country. Every human knows that coal ash affects our drinking water and our recreational lands and lakes.

If the very North Carolina state department that exists to protect the health of our children and wildlife succumbs to this corporation's plea to "cap in place" its toxic waste at Marshall then I predict the word will leak out - to corporations considering relocating here and buyers/developers of waterfront real estate - that NC is becoming unhealthy to invest in. We must look ahead!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

North Carolina deserves to live. We have beauty, life, unique qualities that sustain us & fill us with pride. Our state is irreplaceable.
In short: I Love Calling North Carolina Home.

Please keep it safe for All living creatures. Our aquatic environment offshore remains (I think) undestroyed, to date. Our wildlife remain salvageable. Our trees and plants and natural wildlife still exist, mostly, in pieces, in various parts of the state.

If these wild systems are lost...they cannot be replaced. So my message is simple:
Respect Our World and its Inhabitants.
Repair what we can.
Give natural areas the peace & undisturbed balance they had before we "improved" them with modernization.
Respect Life.

Thank you.

Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Tom Tewell

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Jennifer webber

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I am submitting comments because I believe that it is imperative that DEQ listen to ALL the communities that are impacted by the coal ash that is leaking. Every one of the sites that are to date not part of the coal ash removal need to be addressed.

Duke must NOT be permitted to leave the coal ash in place in unlined pits thus leaking toxins into the groundwater and waterways. While Duke has been required to remove coal ash from all of the sites in SC and 8 of them in NC- WHY would they not be required to remove it from these remaining sites?

I whole heartedly support the view that the unlined pits need to have the coal ash removed to dry lined storage. Waterways and groundwater are being contaminated and that is a deplorable state of affairs. DEQ- please do what is truly the right and just thing to do for all the communities that are effected by Duke's unfortunate treatment of coal ash in the past.

sincerely
Katherine Seligmann

To Whom It May Concern ,

Please help us by joining the efforts of the right thing for the Environment, the population of Lake Norman Area, and across the state of North Carolina.

The fact that it is now 2019 and we, along with Duke Energy, know this Coal Ash is a disaster not only to the Environment but also the People. Thyroid Cancer or any other Health Risk is NCDENR's responsibility to get it cleaned up immediately.

We ask you to send a very clear message to Duke Energy. Excavate the Coal Ash waste off of the properties and **dispose properly** in a rural area outside of North Carolina. The excavation should be started immediately and fines implemented immediately.

No Coal Ash should be left in North Carolina. No more excuses from Duke Energy!

Thanks,

Arden Drose

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I am a Registered Nurse, a Girl Scout volunteer, and a mom that enjoys exploring the beautiful state of North Carolina with my family. I never imagined that I would be regularly checking the North Carolina Department of Environmental Quality (DEQ) compliance and water contamination reports to make sure the shoreline or waterway I'm about to let twelve Daisy Girl Scouts or my own children discover, is not going to harm their health.

The fourteen coal-fired power plants in North Carolina produce 19.3 billion gallons of coal ash and account for more than a third of the state's greenhouse gas emissions. Communities surrounding these power plants, as well as those downstream of coal ash ponds, are at great risk of health consequences due to air and water pollution. Poor air quality causes long-term cardiovascular and respiratory disease. Lead and arsenic, among other toxic chemicals, have polluted water ways from these coal ash ponds and put entire communities at risk for life long and life threatening disease and illness.

Duke Energy has the ability to move coal ash to dry lined storage, away from waterways and groundwater. This action has been required of them in all its South Carolina sites, as well as eight sites in North Carolina. The DEQ needs to require Duke Energy to take this action on the remaining six sites in North Carolina for the health and safety of communities across this great state.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
D Thomas

Hello. I attended the meeting on January 17, 2018 at Sherrill's Ford Elementary.

From the information presented there, the comments from the public, Department of Environmental Quality and the two elected officials is it clear that Duke Energy needs to remove the coal ash completely from its leaking, unlined pits. This needs to be done at not only the Duke Energy's Marshall Steam Station but at all of Duke Energy's coal ash pits throughout North Carolina and the country.

Also Duke Energy should be responsible for the entire clean-up and not allowed to pass the cost on to their customers. Duke's President and CEO, Lynn Good, makes **\$21.4 million a year**. When she originally was hired, she said that Duke's rate payers would not be responsible for the coal ash clean up cost. Perhaps she can forgo some of her enormous, over-bloated salary and apply it towards Duke's coal ash clean up. They created this entire mess.

Also in the meeting it was said that if the coal ash was moved elsewhere on the property, they would clear cut arces of land and forest. That is not necessary and once again, a poor plan of Duke Energy.

Sincerely,

Allana D'Andrea

p.s. Also as stated previously (<https://www.wral.com/editorial-consumers-shouldn-t-pay-for-duke-energy-s-coal-ash-bungles/17145391/>),

"As a regulated monopoly, Duke Energy has an obligation to produce reliable, affordable and safe power while still being guaranteed a reasonable profit for the company and its shareholders. When the company fails to meet one of the three obligations it has to its customers, it isn't the fault of the ratepayers, nor should it be their responsibility to pay."

In a March 12, 2014 letter to then Gov. Pat McCrory and the N.C. Department of Environmental Quality, Duke Energy CEO Lynn Good said, **"We have accepted responsibility for the Dan River ash discharge and have taken a number of immediate actions following the event. <https://www.justice.gov/opa/pr/duke-energy-subsiadiaries-plead-guilty-and-sentenced-pay-102-million-clean-water-act-crimes>**

A little more than a year later, as the company **pleaded guilty to nine criminal violations of the federal Clean Water Act** – four related to the Dan River spill – Good said: **"We are accountable for what happened at Dan River and have learned from this event."** " *Obviously, not!!!*

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Stephanie Johnson

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

As a new resident of 3 years living on the lake within 1.5 miles of the ash ponds I go to bed every night wondering if I have brought harm to the very family that, as their father/husband have tried so hard to protect. The fear that I get when my newborn granddaughter needs to be bathed or needs water for her formula. This is their lives and have only one life to live. How can this danger be taken so lightly. Something drastic has to be done. There is a responsibility that needs to be met. I cannot protect my family from forces beyond my control. They need a voice that my own cannot afford.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Millanne García
198 New Hampshire St
Spindale, NC 28160

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Grover Powe
452 Johnson Melton. Rd
Morven, NC 28119

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Pat Colonna
634 Colonial Dr
High Point, NC 27262

Dear NCDEQ Staff:

I'm a Belmont resident, very concerned about the impacts of coal ash at the Allen Plant. I'm not able to make the January 29th meeting due to travel to help an ailing family member, however I want to submit my feedback.

As a mother and a generally health-conscious person, I already had a home water filter professionally installed at my house despite being on city water miles away from Duke Energy's Allen Plant. I use filtered water for all drinking and cooking purposes, including for our family pets. I don't trust that the coal ash present at the Allen Plant is safe and its proximity to Lake Wylie — an area drinking water source and recreational site — is very concerning.

Logic leads me to believe that a simple capping of the coal ash strewn about the site as it is now will lead to environmental degradation as weather and time result in leakage, seepage, and erosion of weak protective measures (capping).

I urge NCDEQ to require Duke Energy to relocate the coal ash to a lined landfill, preferably off-site but if in Belmont it should be lined and capped so that current and future residents can be assured that our good health is guaranteed no matter what. We want to be guaranteed that the next hurricane or hail storm or flood or 5 or 20 of such events won't lead to an environmental disaster at the Allen site. We want to know that our children will live safe, healthy lives free from toxic ash pollution.

Our basic health is a public right and our community's health is a basic freedom. It is NCDEQ's responsibility to enforce our community right to high quality water supplies and environmental resources. Please do what's right for the citizens of North Carolina. For my child, my family, my friends and neighbors — I'm writing to urge you and Duke Energy to make the right choice for our public health because nothing is more important.

Sincerely,
Alison Carpenter

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Elizabeth Spangler

I'm at the Cramer HS hearing in Belmont. My comments are:

- 1) Duke's proposed plan is not responsive in any way to the challenge. One doesn't 'cap' unlined pits.
- 2) to the maximum safe extent, coal ash should be recycled by encasing in cement bricks, concrete and other methods.
- 3) emulate the bipartisan solution negotiated by Virginia this past week. Excavate these unlined pits ASAP. Recycle at least 25% of the coal ash and move the remainder into double-lined landfills away from rivers, lakes and aquifers with monitored Leak Detection systems. The double-lining would include 2' of clay on the exterior with a durable lining impervious to water.
4. Storage of hazardous waste must be designed with the following priorities:
 - A. Safety always comes First.
 - B. Maintenance Second.

As the California utility PG&E is belatedly learning the hard way, profits will evaporate if Safety and Maintenance are ignored.

Respectfully,
Steve Yaffe,

I would like to encourage DEQ to require Duke Energy to remove its coal ash from leaking, unlined pits and move it to dry-lined storage away from waterways and groundwater.

I would like to encourage DEQ to maintain vigilant monitoring on all coal ash sites and report the data frequently. Duke Energy should help fund this monitoring.

I also encourage Duke Energy to fund research for methods of coal ash mitigation to reduce contaminants in the ash, to fund research to use mitigated coal ash and to fund research and encourage increased use of sustainable energy.

Thank you,

Dear Department of Environmental Quality Representatives,

Tonight I attended the public hearing at Stuart Cramer High School regarding proposals to deal with the coal ash basins at Allen Steam Station. I am a resident of South Charlotte and believe that the only acceptable options for dealing with this waste involve excavating all the coal ash at the Allen site and moving it to lined containers. Whether those are on- or off-site is beyond my expertise, but I would hope that the final decision would be made taking public health and safety into consideration in a manner at least equal to, if not higher than, the cost to Duke Energy.

The discussion about capping the current basins and the subsequent damage from a strong hurricane (such as those that will be occurring more and more as climate change takes its toll) seemed especially ludicrous to me. If vast amounts of water are blocked from seeping into the ground over hundreds of acres, how does that not cause major flooding in surrounding areas? The water has to go somewhere.

Thank you for accepting my comments,

To Department of Environmental Quality.

I understand that you plan to “Cap in Place” six coal ash sites, where the coal ash is leaking into the rivers that provide drinking water. Duke wants this, saying it’s cheaper. These people, often in communities where people have already been dying of coal ash poisoning, deserve to have the coal ash excavated and taken back to Duke. Namely, Goldsboro and Belews Creek, but more deaths will come if you don’t take care of people first.

Of course, there is now a viable option, of using the method of making building materials out of the coal ash, without having to re-burn it. Check out the discovery at A&T University in Greensboro. Re-burning it for cement is toxic, too. Enough of this poison. Let Duke have it. Don’t do what Duke wants. They don’t care about people dying. Think of all those 37 institutions, mostly religious, which are shareholders and urged Duke to clean up after the hurricanes, and be sure not to harm the people living near these sites. Let Duke lose its investors big time. You take care of us citizens and stop poisoning us. Landfills leak, too, but if you put them on Duke property away from people and rivers, maybe Duke will learn something finally.

Good morning,

I attended the DEQ meeting last night in Belmont concerning the coal-ash pits near Lake Wylie. I appreciate the willingness to hear at length from the public, including some who were a little hostile. Although I'm a Belmont resident, I have not been directly affected as some of those who spoke with great emotion and factual information and who, I think, are justifiably frustrated after years of hearings and lack of responsible action by Duke Energy. As someone stated it last night, we're ALL downstream and all potentially affected.

It seems obvious that the only sane course that will truly protect the public health and environment is to excavate the unlined pits and move the ash to lined pits and/or recycle the ash into concrete. Other options may be less expensive for Duke but don't go far enough. And I think Duke and its shareholders should pay most of the cost, rather than the rate payers having to bear the brunt. (I realize that's an issue for the Public Utilities Commission.) And how embarrassing that North Carolina lags behind its neighboring states in addressing the problem!

I am speaking out not only as a concerned resident of Belmont but also as a Duke Energy customer whose father did engineering work for Duke Power and whose family members (including myself) have been longtime shareholders of Duke Power/Energy. We all enjoy the reliable energy that Duke supplies to our homes and workplaces, and I realize that coal ash is one of the costs of that. But this problem with the coal-ash pits is hardly a surprise, and it cries out for better management. We need DEQ and our legislators to hold Duke's feet to the fire.

Thank you,
Beth Thompson

The plan to merely cap these pits, which endanger the lives of numerous people who depend on their nearby well water, is not only insufficient but borders on criminal neglect. The pits should be emptied and the contents made safe in a variety of ways already employed by the more responsible states of South Carolina and Virginia. Duke Energy should not be allowed to save itself money by ignoring the deadly proximity of these pits to people who live in that area.

Sincerely,
Pat Gubbins

January 30, 2019

Assistant Secretary Holman
North Carolina Environmental Quality

Thank you for bringing your team to Stuart Cramer High School last night to listen to the residents of the Allen Plant and the Belmont/Cramerton Community. We all agree that Duke Energy has been a good corporation to Gaston County and many of the homes that surround Duke Energy Allen Plant were once and some still home to the people that built and worked in the Allen Plant for Duke.

I had the privilege of being the first speaker last night and my intent was to raise the issue of another option of Beneficiation. I mentioned that Duke Energy has investigated numerous options for the safe disposal of coal ash, and they are highlighted in the Duke Energy Coal Combustion Product Management Study Phase 3, Attached. I believe that Section 2-4 Masonry Units can be applied at the Allen Plant and that Duke Energy has investigated all the options in this report. They are looking for direction from the General Assembly in the form of CAMA III or CAMA IV.

One Company, Nu-Rock has a long history of using coal ash in cement products and they located their USA headquarters in Charlotte while their International HQ is in Australia.

This is a very viable option that has been investigated by UNCC and Virginia

Tech.

With careful consideration Duke Energy and North Carolina and rehabilitate 200 acres of coal ash basins and improve the over 900 acres that are owned by Duke Energy surrounding the Allen Plant. In the end, this would become some of the most valuable land in Gaston County with over a mile of Catawba River frontage and its proximity to Charlotte.

If given the opportunity I could review numerous options with you and your staff for consideration.

This would be a Win, Win, Win

I look forward to hearing from you,

Wil Neumann

Former NCGA Member, House 108

A resident of Belmont/Cramerton

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Michelle Lee

There are plenty of technical points that argue against your cap in place plan. The most significant to me are that the ponds have been built over stream beds. Even if capped, erosion from the stream flow that travels under the lagoons will continue to carry toxic metals into the river. The site is 60 years old, it's already leaking, Allen's dams have failed before and over 114,000 people rely on drinking water intakes immediately downstream. With the ash stacked 75 feet high on the banks of the river I'm worried about a hurricane, earthquake, or 100 year flood that could lead to dam failure.

I'd like to note that I originally submitted the above comment in February of 2016. I attended the public hearing in Belmont on January 29 and was shocked to hear others have been offering public comments on this issue since 2015, one woman testifying that she has attended over 60 public gatherings on the issue over this time. It is long past time for DEQ and Duke Energy to remove the ash, just as is being done in Virginia and North Carolina.

I really don't blame Duke Energy for trying to do the minimum and pass the costs off to rate payers. That's exactly what a cutthroat company should do to maximize profits for shareholders. I do blame DEQ, however, because I feel that it is your job to step in and take action for the public good, which Duke will never do.

My request is that all ash lagoons in North Carolina be relocated to lined landfills. The design I saw on display at the Belmont meeting with a 60 mil plastic liner under the coal ash seemed well thought out and appropriate for this task.

Thank you again for taking comments from the public,

Please accept this email as a clear and concise request to demand of Duke energy to excavate and remove all coal ash from the proximity of the Catawba river, or any water way. Duke should have to pay for this clean up and other NC coal ash sites without the financial impact being felt by their paying customers. Thank you from myself and my family that lives in Belmont, NC.

As a real estate agent working in the area of the Allen Steam station the coal ash has caused much concern and harm to property values. We support the only option which would be to relocate or repurpose all the coal ash leaving none to contaminate our water. Has there been any review of using the coal train access to expedite the removal process and limit the amount of trucking that would be needed which impacts the roads?

Thank you,
Allison Cottingham

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. The state of Virginia has taken action and is going to be definitely doing this work and more efforts will be used to clean up and out four sites of coal ash across the Dominion.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. It is the only and safest choice now.

Thank you and with best

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I cannot comprehend why a company that is as community oriented as Duke Energy - which gives away literally millions of dollars to community, education, and environmental causes - fails to take this on. Maybe all the different parties affected by the heavy metal pollution contained in coal ash should apply for Powerful Communities grants... and use the money to hire professionals to clean this mess up. Or...

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities. Communities of color and low income communities are often hit the hardest. This is an environmental justice issue to be sure. It is high time to own up to these facts. People living near coal ash sites cannot depend on their water for drinking, bathing, gardening, and normal household activities. Those down stream and in lower water table areas are at risk as well. Coal mining, burning, and disposal is dirty business, and there are cleaner technologies for energy going forward. There are clean methods of dealing with waste, but cap in place is not one of them!

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear DEQ,

Thank you for taking comments on the coal ash located at the Allen Plant on the banks of Lake Wylie.

This toxic substance must be moved away from the waterway, made into a solid form that will not wash away, or put in a lined landfill away from the site.

All the coal ash in North Carolina must be moved away from waterways and stored securely.

The cap-in-place or hybrid approach is not enough to protect our people and environment from the chemicals within the coal ash.

I live nearby and my family uses well water. Please protect our groundwater.

Thank you,

Suzanna Dees

To Whom It May Concern,

Attached are my comments in a WORD document that detail my support for Option #5 of Duke Energy's *Allen Steam Station Ash Basin Closure Options Analysis*. Removal/excavation of all existing coal ash basins from the Allen Steam Station location next to the Catawba River/Lake Wylie is the wisest long-term solution to this unfortunate ground and surface water contaminants issue.

Many related concerns and questions arose in my mind during the January 29, 2019 public meeting by the North Carolina Department of Environmental Quality. They are also included in the attached document. Please take the time to read through it and respond to my questions and concerns.

Thank you for providing this opportunity for feedback.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

RE: Statement Regarding Duke Energy's Final Closure Plans for Coal Ash Impoundments

I moved to North Carolina in 2014 from Tennessee, where I witnessed the immediate aftermath of the largest coal ash disaster in the United States in late 2008. As a researcher, I spent a lot of time speaking with residents and workers impacted by the Tennessee Valley Authority spill. Had the disaster occurred during the day time, it could have been deadly for residents and the agency had opportunities to prevent the disaster prior to the spill by moving the ash to a lined, dry landfill, but the agency chose to cheapest route to address previous problems in the impoundment. In the long-run, the disaster cost much more than it would have cost of convert the impoundment to a lined landfill. The costs were not just felt by TVA, but by the community, especially those who were displaced, those who experienced devalued property, and those who fear the long-term health outcomes. DEQ and Duke Energy have the opportunity to make the right decision for everyone and to prevent future disasters, spills and leaks. **DEQ should require Duke Energy to remove its coal ash from its leaking, unlined impoundments and move it to dry lined storage.** This is what the community wants and it is the best choice for people, the environment, and water systems.

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov<<mailto:report.spam@nc.gov>>

I attended the public hearing on January 29, 2019 at Cramer High School in Cramerton, NC.

I am a resident of Belmont, NC, living in the McLean South Shore neighborhood approximately 3.5 miles from the Allen Steam Station. My electric power supplier is Rutherford Electric Management Cooperative, and my water is supplied by City of Belmont. However, my property is on the waterfront, and my family is blessed to be able to enjoy the natural beauty of the Catawba River and Lake Wylie, along with the recreational amenities available, and I'm writing as a member of the Belmont and greater Catawba River basin community.

I believe any solution other than excavation and removal of coal ash stored on the property of the Steam Station is unacceptable. We already have an example of what can happen when coal ash spills into a body of water (Dan River spill, February 2014), and the environmental catastrophe that resulted. The population density around the Allen Steam Station is much greater than in Eden, and the consequences of such a spill in the Catawba River negatively affect significantly more people. As a public health physician, I am aware of the human health effects of the toxic components of coal ash, and because I know you are as well, I will not repeat them in this comment. But please note that my comment is based on medical evidence.

At the hearing on January 29, it was said that the State of South Carolina and the Commonwealth of Virginia have employed excavation and removal exclusively in coal ash pond mitigation. This seems to have become the standard in coal ash pond mitigation. It is unacceptable for North Carolina to do otherwise.

It is unethical for cost to factor into DEQ's consideration of which disposal method is required. Duke Energy is by no means a villain. Perhaps when it began using coal to generate electricity, the long term effects of storing coal ash on site were unknown. But managing coal ash is a cost of doing business, and that cost should take into account protection of natural resources, and most importantly, human health. When Duke made the (lower cost) decision to store coal ash on site—regardless of the reason, it conserved revenue that may have been used in other ways (e.g. distribution to shareholders). Now, those conserved funds need to be utilized to properly manage the coal ash that has been stored on site. It is unfair for Duke to consider excavation and removal a "new cost," and pass it on to its customers. Duke needs to bear this cost for the coal ash that has been stored up until now. It would, however, seem reasonable for removal of continuing generation of coal ash to result in a new cost of doing business going forward.

The right choice here is clear. Duke Energy must excavate and remove the coal ash to an area where it will minimally affect human health, natural beauty, and environmental safety. To do otherwise would be a travesty.

Thank you,

Stephen R. Keener, MD MPH

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

On behalf of friends who have well water whose water supply (near the Lake Wylie and Catawba River) is significantly compromised by the active coal ash and ash basins near them, I am reaching out to ask for a complete cleanup of these toxic sources. No one wants to bathe, drink or be exposed to toxic levels of chemicals that are known cancer-causing agents. SC and VA have REQUIRED all coal ash to be removed. The fact that NC is just haphazardly risking the lives of those near active coal ash sites is completely unacceptable and embarrassing as a state.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Please take this feedback into consideration - do a complete cleanup of coal ash in NC so that we do not have to fear for the health of those living in proximity to these sources.

I am a resident of Lee County, North Carolina. It is my hope that the NC DENR will hold Duke Energy responsible for the clean up of all coal ash. The saltstone method of disposal would isolate this hazardous waste for safe and permanent storage. They should store the coal ash on their own property, and not be allowed to move it across our state as they have in the Moncure area. It should not be capped in place. The citizens of our state deserve protection from the pollution that coal ash poses.

Allen Steam Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. James Davidson

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake. Our association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain?

Subject: Coal Ash Update from LWA

LWA Member:

Please take a few minutes and send an e-mail to allencomments@ncdenr.gov. Also included is a letter sent to the NC DEQ from Harriet Brown, our External Affairs Chair. You can use any or all of this e-mail. E-mails must be received by Feb 15.

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake. Our association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility

companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain?

Harriet Brown, External Affairs Committee, LWA

We are homeowners at Lake Wateree and DO NOT WANT our beautiful lake destroyed by coal ash. Coal ash NEEDS TO BE REMOVED in the lakes in North

Carolina NOW !!!!! As our neighbors, you must be concerned about us also. Please continue the clean up of the mess, that Duke has created, and keep our

lakes (all of them) CLEAN.

Thank you,

Tom and Stephanie Ellis

Dear North Carolina

The quality of the water that comes down from NC through the Catawba river system that ends in the middle of Lake Wateree is bad enough, why would you not get rid of the coal ash at plants in NC? Eventually it will become a problem get rid of it now it will just cost the company more money later..

Thanks so much

Brad

Dear sir:

As a Duke customer, a property owner on Lake Wateree and resident of NC, I wholeheartedly agree with the need for the coal ash to be removed to a safer containment, not stored in its current location. The coal ash needs to be moved to new better-lined storage location, more distant from rivers that flow through our states.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
John Braswell

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. William Ramsey

Surely, a total of zero people think that leaving coal ash in unlined pits is a good idea for the health of our state and its citizens. It was NEVER a good idea to store this toxic waste in this manner, and it should never have been permitted to begin. Duke should be required to clean up its own mess onsite without inflating the "costs" of what it should have done in the first place.

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.

- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mrs. Elaine Robbins

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.

Subject: Coal Ash Update from LWA
To: <ira.cooper55@gmail.com>

LWA Member:

Please take a few minutes and send an e-mail to allencomments@ncdenr.gov. Also included is a letter sent to the NC DEQ from Harriet Brown, our External Affairs Chair. You can use any or all of this e-mail. E-mails must be received by Feb 15.

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake. Our association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has

decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain?

Harriet Brown, External Affairs Committee, LWA

To Whom It May Concern:

I am a resident of Lake Wateree, SC. I wish to encourage DENR to make the right and obvious decision to require removal of coal ash at Allen and all locations that have unlined container systems near Catawba lakes and the River.

The spill into the Dan River just a few years ago should be all the evidence you need. Please follow the examples set by SC utilities and protect the water and health of residents and wildlife!

Sincerely,

Randy Kelley

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

To the NC Dept. of Environmental Quality:

We are residents at Lake Wateree in South Carolina and as you are aware the last lake on the Catawba-Wateree River chain. In view of this we strongly ask you to require that coal ash be removed from the banks of all our lakes. It is my understanding that the fate of coal ash on Lake Norman and Lake Wylie will be determined in April.

We ask that you carefully consider the impact on the people down stream that depend on Lake Wateree for drinking water and enjoyment by boating, swimming, fishing, etc.

Please help make our Lake safe.

Very truly yours,

Parker and Gladys Gibson

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Fred Chastang

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Lisa May

To the North Carolina Department of Environmental Quality:

I am a homeowner on Lake Wateree and a member of the Lake Wateree Association (“LWA”) referred to in the letter to you from Harriet Brown, External Affairs Committee of the LWA, a copy of which is copied into this email below. I am also a homeowner and life-long resident of North Carolina, the state whose surface water and groundwater sources you are tasked to protect. I completely support Ms. Brown’s position expressed in her letter and strongly urge you to remove coal ash from unlined pits and move it to an area that is safer and to move all pits (lined and unlined) away from our waterways.

Regards,

Mike Brady
509 S. Overlook Way
Flat Rock , NC 28871

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake. Our

association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain?

I own land below Allen on the river. As you well know everything runs downhill. I am asking NC DENR to protect the waters of the Catawba-Wateree-Santee-Cooper Rivers from the coal ash threat at Allen Steam Station.

I know Duke Energy is quite the bully and their head-quarters are in Charlotte NC but please do your job and protect the water that millions of people in North and South Carolina depend on. Please don't let our river be another example of waiting to long and letting the disaster strike like we have read about in the paper.

Duke Energy knows the threats and tries to hide behind the all-might dollar, please make Duke Energy remove the coal ash ponds on the banks of the Catawba River for the sake of the river, wildlife, recreation, millions of people and your own conscious. Please stand up to Duke. We are counting on NC DENR to protect our river and us.
From a concerned citizen on the banks of Lake Wateree.

RE: Public Comment on the Allen Coal Ash Cleanup

null

To whom it concerns,
I am a citizen of North Carolina and customer of Duke Energy.

DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup—for the safety of my fellow citizens! The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.

Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections. Duke Energy can dispose of all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not to travel through the community or to other communities.

Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of water pollution. Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.

It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Miss. Alaina Norzagaray

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake. Our association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain?

Thank you.

Sincerely,
Harry and Virginia Miller

I am a resident of Lake Wateree.

Lake Wateree is the last lake in the Catawba/Wateree chain of lakes.

Anything that is introduced into the river system above us ends up in our lake.

We get our drinking water from this lake.

My Grandchildren swim in this lake.

We eat the fish from this lake.

It is my understanding that coal ash ponds adjacent to the river system have the potential to leak arsenic into the water.

Why would anyone knowingly leave these ponds unchecked when there are so many harmful effects to the populations around these ponds.

Ask yourself this: would I want my self or my loved ones subjected to this poisonous material.

I think not.

So please do the right thing and clean up these coal ash sites.

Thank you, Chuck Cox

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Allen Steam Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Jay Marlow

NC DEQ decision makers,

I am writing to weigh in on the closure of the coal ash site referenced above. Although I am now merely a private citizen concerned about coal ash storage, as a previous staff member at Clean Water for North Carolina, I spent many years researching coal ash contamination. I know the threats that unlined ash basins can pose to public health and environmental quality, even when the water is drained and the basin is capped in place. I urge you not to allow capping in place of ash at this or any other site in North Carolina.

One aspect that concerns me is that the toxic metals and other compounds associated with coal ash would still be present without any liner after the basin is drained, and could therefore still leach into the nearby aquifer, affecting well water and surface water nearby. Please consider conducting your own independent analysis that identifies the safest closure option for the long-term protection of water supplies. This decision is so important for the health of the communities near this coal ash site, so I hope you will consider it carefully.

Sincerely,

Katie Hicks

To: North Carolina Department of Environmental Quality

My wife and I lived in Charlotte for about 20 years until our retirement in 2000. Upon retirement we built a home on Lake Wateree in South Carolina as we were able to find a beautiful affordable lot. Since living here we have enjoyed with our children and grandchildren fishing, swimming, tubing and pontooning on this beautiful lake. We have had to

engage with Duke Power during relicensing to insure the water quality, recreational opportunities, and control of flooding be a priority for all the people that use this resource.

As the last lake on the Catawba chain we are the beneficiary of everything that comes down from above for example phosphorous loading from charlotte, flood waters, etc.

Please help to protect us from the pollutants in the coal ash pits. It needs to be moved to a safe location not just contained in lined pits which will eventually leak or fail.

In addition to the recreational aspects of this water it is also used for drinking here in South Carolina.

Please take care of this issue now to protect this valuable resource for current and future generations.

Thanks for your consideration.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
John Grup

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination including ourselves. Others boat, swim, and fish in our lake. Our association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have to rely on water drawn from the Catawba-Wateree chain?

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. J.A. Perry

P.S.

The very concept of having to tell a company not to spill and dump their waste in a way that it will devastate communities and the natural wildlife is baffling, having to them to cleanup after themselves when they have recklessly dumped their waste is even more baffling. Ignore statistics about profit margins, and remember families, children, parents, and entire communities who are all dragged down to the depths by the monstrous act of willful pollution.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. Well, if you'd keep coal ash sealed in place, but when Hurricane Florence rained >30 inches in September, coal ash entered streams and stream sediments and rivers and floated as a plume of sludge to MY Newport River estuary and Beaufort Inlet, so I and my dog couldn't swim for months and I couldn't eat seafood. Coal Ash heavy metals scare me: arsenic, lead, mercury, cadmium, chromium, zinc, manganese, vanadium, molybdenum, nickel, iron, beryllium. CONTAIN THESE TOXICS, PLEASE!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Aiden Kenny

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Meredith Shelton

Subject: Coal Ash Update from LWA

LWA Member:

Please take a few minutes and send an e-mail to allencomments@ncdenr.gov. Also included is a letter sent to the NC DEQ from Harriet Brown, our External Affairs Chair. You can use any or all of this e-mail. E-mails must be received by Feb 15.

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake. Our association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has

decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain?

Harriet Brown, External Affairs Committee, LWA

Hello,

I am writing to give input on how coal ash sites are closed in NC.

I ask that there be a complete excavation at every site. While other techniques may be cheaper, they require monitoring and are more risky for NC residents. Other states are seeing the need to choose the most effective technique for protection of water and residents. I ask that NC DEQ also work to protect the people and water of our state by requiring complete excavation of the coal ash sites.

Thank you,
Lauren Nyland

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

I live on Lake Norman near Marshall Steam Station and drink water from a well. So any coal ash incident which contaminated the ground water or spilled into the lake itself would have a terrible impact on my property, and the thousands of others who call the lake home. And the thousands more who may not live on the lake, but depend on the water table for safe drinking water for their family. Let's all say that we did not know the consequences of storing coal ash in unlined pits in the past. But we do now. Let's mandate that all coal ash in N.C. be placed in dry, lined pits away from waterways. And we, the taxpayers of North Carolina and customers of Duke Energy will bear the cost. We are responsible for the mess that we made and we owe it to our children and grandchildren to fix this and fix it in a manner that cannot impact them in the future.

I know there are arguments about storing the Marshall coal ash onsite or offsite. I will let people smarter than me decide that. But I ask you to require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

My husband & I live on Lake Norman near Marshall Steam Station and drink water from a well. So any coal ash incident which contaminated the ground water or spilled into the lake itself would have a terrible impact on my property, and the thousands of others who call the lake home. And the thousands more who may not live on the lake, but depend on the water table for safe drinking water for their family. Let's all say that we did not know the consequences of storing coal ash in unlined pits in the past. But we do now. Let's mandate that all coal ash in N.C. be placed in dry, lined pits away from waterways. And we, the taxpayers of North Carolina and customers of Duke Energy will bear the cost. We are responsible for the mess that we made and we owe it to our children and grandchildren to fix this and fix it in a manner that cannot impact them in the future.

I know there are arguments about storing the Marshall coal ash onsite or offsite. Leave some, move some, (truck or train it out!) but I ask you to require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. And someone other than Duke Energy make sure it this is all done properly.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for NC DEQ and Duke Energy to listen to the communities. The NC DEQ works for the citizens of North Carolina not Duke Energy!

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. NC DEQ protect ALL of North Carolina and do the right thing and not let Duke Energy ruin our beautiful state.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

How can this be anything but obvious? Coal ash is caustic and causes serious damage to waterways, and by extension, small businesses, tourism, animals, birds, fish, reptiles and people. When that ash got dumped into the Dan River, people were instructed not to touch it. If something is too caustic to even touch, what kind of damage is it doing to the ecosystem?!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Cleaning up coal ash and keeping it out of our water is a cost of burning coal. If we want the market to allow the best and most cost effective ways of generating electricity to prevail in our economy, we can only have that when energy systems cover their own cost as they do business. How many bonuses and pay raises have Duke executives received from the proceeds of externalizing the real cost of dealing with their own waste? Prevention is nearly always cheaper than trying to clean up after a spill. Coal ash spills can never be completely cleaned up. The damage cannot be undone. Prevention is the only viable option for keeping our land, water, wildlife, and our wells safe. There is no excuse for not doing it.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Margie Imus

Allen Steam Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Ronnie Smith

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake. Our association is charged to keep Lake Wateree a place for all to enjoy.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Please take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain.

Tina Stokes
Resident Lake Wateree

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Allen Steam Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. P. Emerson

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

As an engineer, my greatest concern is how coal ash ponds react during historic rain events as Climate change trends show an increasing rate of these events. We recently saw coal ash ponds over run their banks during the Tropical Storm & Hurricane events of Fall 2018. This overflow went directly into the watershed.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

First - I cannot believe we are still debating this. My only conclusion is that this administration has decided to stay in the Duke love fest. Why is Duke still dictating to DEQ. I went to the so called “public forums”. It was more Duke lies. Why would DEQ and the administration take the word of a known criminal polluting company (convicted in court) over the health and environmental concerns of citizens? I also pose this question, “What is Duke trying to cover up?” Is there something in the bottom of these particular pits they don’t want to come to light? We have had enough of Duke’s lies. If the state of NC chooses any action other than the complete removal of these pollutants, then the answer will be in the open. Duke Energy controls the state of North Carolina.

My demands as a Citizen are as follows:

1. The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.
2. Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!
3. The communities around the coal ash ponds have come out time after time over the last several years, making clear that we’re concerned about pollution from Duke Energy’s coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.
4. Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Please do the right thing for the citizens of North Carolina. And the next time DEQ has a public hearing I suggest you let your uninformed spokesperson let the supposed “experts” employed by NC speak. Or are they only memorized puppets who represent Duke instead of NC as well?

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
John Wolfe

The science is clear. The delay tactics are as numerous as the political contributions. There is NO logical reason to leave this material where it is. There is NO excuse for allowing it to be there this long. Duke saved and profited a great deal of money by not disposing of it properly, the cost to clean it up is NOT a public issue. Contaminated groundwater and contamination of a public water source is not a potential issue, it is a current and real issue.

These sites should not be capped in place. If capped in place, the sites will:

- continue to pollute groundwater;
- require permanent monitoring and maintenance; and
- threaten our surface waters with the risk of breaches.

Instead, the coal ash should be stored in lined landfills that meet federal guidelines or recycled into concrete and other building materials. This is already being done at sites across North Carolina and in neighboring states.

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Eric Halvarson

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

Dear Sir or Madam,

Writing as a concerned citizen who also serves as an elected official (in my third term as a Soil and Water Conservation District Supervisor in Mecklenburg, after having served 6 terms on the Charlotte City Council, i.e. 12 years), I do want to voice my anxiety about coal ash. The professional opinion is that sites containing coal ash should not be capped where they are, since groundwater is invaded by the toxins from these sites which would require maintenance and monitoring and would ultimately end up in our surface waters through seepage or breaches. I am particularly concerned about the site at Mountain Island which provides drinking water for most of our region.

Professionals recommend that coal ash be stored in lined landfills which meet federal guidelines. I am concerned about leaching from concrete if the coal ash is mixed into any building materials. Has there been sufficient, long term research done on that solution?

I am also concerned that Duke Energy not pass along to consumers the cost of any approved solution. Shareholders, including our family, benefitted from the savings of the unprotected deposits. I think that the shareholders should shoulder the responsibility for rectifying the situation.

Thank you for hearing my concerns. I have spoken at a hearing in NC, not recently, for I have been attending SWCD meetings in the state and nationally.

Most sincerely,
Nancy G. Carter
Charlotte

In my opinion, Duke should be required to move the coal ash to a safe storage facility off of the Allen Plant location. Or, the coal ash at Allen should be relocated to a lined and then capped storage facility at Allen.

Capping and storing the coal ash at Allen in place and in an unlined basin is not a viable solution because this option will not protect the ground water table and Lake Wylie from the heavy metals that are leaching out of the existing coal ash basins.

To the North Carolina Department of Environmental Quality:

I am a member of Lake Wateree Association (LWA). LWA represents 1,000 households here at Lake Wateree, SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As the last lake on the Catawba-Wateree chain, it is of utmost concern to the residents, vacationers, recreational enthusiasts, game and wildlife, that the water quality remain at safe, usable and drinkable levels. Having several friends that work at Coal Ash plants in NC, I think I have a fairly descent understanding of the issue and potential issues and quality problems downstream. The risk and threat is real.

I implore you to address any and all coal ash issues that will affect your local residents, as well as all those millions of residents downstream. Would you want your family drinking coal ash affected water? Would you want them swimming in it?

Thanks for your attention and efforts to address this matter, in the past and certainly your efforts in the future. Lives are literally depending you and your decisions and actions.

Regards,
H. Muse

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Robert Ph.D.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

Duke Energy has shown a complete disregard for their customers and fellow citizens by knowingly and willingly sacrificing our health and safety for extraordinary profits. Paying shareholder healthy dividends does not release you from the moral and ethical responsibility to safe guard your customers and the environment. Your callus approach to profits would make it appear that the company does not believe it can ethically conduct business and still be profitable which of course is not true. I has been demonstrated by more than a few companies that implementing a management philosophy that relies heavily on business ethics are proven to be more successful than those that operate in an unethical manner.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to act in an ethical manner and remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. It is DEQ's responsibility to protect the health and well being of all Carolinians so please do your job.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

To the North Carolina Department of Environmental Quality:

I reside in a lakefront home on Lake Wateree in SC. I am sure you are wondering why someone from South Carolina is writing you about coal ash issues in North Carolina.

As you probably already know, Lake Wateree is the last lake in the Catawba-Wateree chain. Many people have made Lake Wateree their retirement destination. Others boat, swim, and fish in our lake.

What happens on lakes and rivers upstream in this chain eventually makes its way to us - whether good or bad. South Carolina utility companies- Duke Energy, South Carolina Electric and Gas, and Santee Cooper- have all agreed to remove coal ash from unlined pits and move it to an area that is safer. Arsenic beneath these pits has decreased by 90% since the coal ash has been moved. Why would North Carolina even consider not moving the coal ash?

Your Division of Water Resources is tasked to protect the state's surface water and groundwater resources. Water companies in both North and South Carolina pull water from the Catawba-Wateree chain that is used for drinking water.

Why not take care of this issue now before it negatively impacts many people who have rely on water drawn from the Catawba-Wateree chain?

Sincerely,

Wanda and Kenneth Webb

To whom it may concern,

I would like to express my support for the complete full excavation of both the Allen and Marshall Coal Ash Sites by Duke Energy. I feel that the capping the Coal Ash in place will continue to contaminate the groundwater and discharge pollutants into Lake Norman and Lake Wylie. I feel the only safe solution is to completely excavate the sites and either recycled the Coal Ash or stored it in lined landfills.

Thank you for this opportunity to express my thoughts on this topic.

To whom it may concern,

I am writing as an environmental scientist and a North Carolina native, someone with deep affection for the wellbeing of my home state and also an informed perspective on the environmental health risks of coal ash.

Capping unlined coal ash sites is an insufficient and negligent course of action; The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to place this toxic waste into lined pits that meet federal guidelines. Duke's existing unlined coal ash pits have been shown to leak into groundwater and will continue to pose a long-term threat to the health of nearby North Carolina residents until the ash is removed. Even if it's a more expensive and difficult solution, it's the only way North Carolina can address its coal ash problem with a clear conscience.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Jill King

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov<<mailto:report.spam@nc.gov>>

We have moved to Lake Wylie from Tridelphia Lake in Maryland. We assumed, wrongly, when we purchased property here that the lake water quality would be as closely monitored and safe for swimming and consuming the fish as it was in Maryland. We see families swimming in the lake all summer, obviously not realizing the dangerous contaminants in Lake Wylie. We know people who feed their family contaminated fish from this lake. We are shocked to discover that federal regulations are not enforced and private citizens must not only hold down their own jobs, but also do what government environmental employees are paid to do.

Please, have some regard for the health and welfare of residents in North and South Carolina and force Duke Energy to move their coal ash and cap it in a concrete lined, secure location.

This is the only morally responsible thing you can do to improve the environmental health of Lake Wylie.

Sincerely,

Dorothea & Del Luce

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Kelly Morley

Allen Steam Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
 - Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
 - The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
 - Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
 - Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
 - Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
 - Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
 - It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.
- . The question is "What is convenient for Duke?", but rather "How do we keep the community we serve healthy and safe?" It is the latter. AS we said above, Duke is doing the right thing in SC, so why should NC be any different.

Sincerely,
Mr. George Burazer

For the sake of our environment and safe drinking water, Please do not cap sites in place. Instead, the coal ash should be stored in lined landfills that meet federal guidelines or recycled into concrete and other building materials. This is already being done at sites across North Carolina and in neighboring states.

Thank you

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Duke created this problem, not their customers and should pay for the clean up, regardless of what it does to their stock prices. Perhaps those who were receiving huge dividends and making millions on stock options should be required to pay up as well. Duke has also been allowed to make Billions of dollars in sales of waterfront real estate through Crescent Land and Timber. I believe that ALL of this land should be the subject of a Federal Investigation as to whether Duke knowingly sold these parcels that are contaminated. A class action lawsuit may well be called for.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Elizabeth Freeman
4105 Halifax Rd
Wilmington, NC 28403

02/15/2019

To Whom It May Concern,

I am a resident of Gaston County living on Mountain Island Lake (MIL) for the past 18 years where the Duke Energy Riverbend Steam Plant had been located. I won't go through the history of the Catawba River and all the lakes that are controlled by Duke Energy. I have been disappointed in the lack of real concern and interest in the environmental issues of the river. I understand all the scientific theories of compounds naturally found vs artificially imparted as residue from coal ash.

The current problem is we all know the effects of this contamination into our water supply in NC. Clean up is a necessary side effect of long term willingness to clean up environmental mistakes. Please take responsibility to your NC residents and insist this mess be clean up in a manner to stop future contamination. Do it the right way.

Here at MIL the ash pits had underground steams running under the pile of ash and took contaminates to the lake ever since the plant was built. These underground streams may not always be running based on surface water seepage down into the ash pit and total annual rain fall. The only way to stop this is build a new pit away from the river basin, line the bottom and sides of the pit and place the old ash into the pit then cap it over. You can not just put a cap over existing ash pits as surface water will continue to get into the ash pit and potentially get into these underground stream and flow into the lake (Hence move pit away from the lake).

Please continue what was proposed and planned for Riverbend Steam Plant location. They are still removing ash from the site (5 years) which will, over time clean the water supply for Charlotte NC and surrounding towns and provide safer recreational activities on the lake.

--

Thank you
Chuck Myers

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

As a former environmental scientist for the Florida Department of Environmental Protection, I am compelled to provide my observation: Duke has not provided reasonable assurance that the Marshall and Allen coal ash ponds will be in compliance with federal and state environmental laws.

To be clear, it is impossible for anyone to provide any reasonable assurance that a hazardous waste storage site will be in compliance when: (1) the site is already out of compliance and (2) cannot be corrected without the complete excavation, installation of proper lining, and construction of containment infrastructure. We know that coal ash and derivative contaminants AR in the groundwater table at both the Marshall Steam Station and the Allen Steam Station. Duke has stipulated to those facts, as well.

Consider that if the coal ash is excavated, in order to construct an appropriately lined storage reservoir, a new permit application (not modification) would normally be required and fair and equal standards applied. As part of that application, the riverside and lakeside locations would probably not be selected for a new facility under today's siting rules.

Indeed, it appears that Duke has been given preferential treatment, evidenced by the arbitrary procedural measures taken to reclassify its ash ponds as reduced risk. The risk reduction was not granted because of changed physical conditions on-site. Rather, the risk was reduced simply because Duke asked for a favorable reassessment. A different standard was applied. Reviewers appear to have tailored their assessment in order to reclassify the sites because the potential risk of the sites has only increased due to the increased amount of material and aging of the facilities. This counterintuitive risk assessment and decision-making process satisfies the (normally difficult to illustrate) "arbitrary and capricious" standard required to revoke a permit.

I also expect that other facilities have not been granted the option to cap hazardous waste in-place when it was actively contaminating groundwater, wetlands, and surface waters-- particularly drinking water supplies. Although no site is equal, North Carolina residents and businesses require an equal application of the law. The mere fact that a cap-in-place option was extended to Duke illustrates unfair and improper application of administrative rules and procedures.

From a permitting or compliance administrator's perspective, it will be a nightmare address ongoing, chronic violations at these sites as hydrological and geological processes continue. Leaving the waste at these locations indefinitely requires an unacceptable amounts of government hand holding and babysitting. I don't think the State of North Carolina is prepared to assume the role of adoptive parents of two problem children.

For decades, Duke has abdicated its responsibility to better dispose of and recycle its coal ash. It is time that Duke assumes the responsibility.

It is also time that NCDEQ stops deferring to Duke. NCDEQ has the staff and the expertise. So, deference to information provided by Duke contractors at public meetings is an insult to the talented scientists, engineers, and technicians working for the state of North Carolina.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

NC Department of Environmental Quality,

North Carolina's coal ash dumps and ponds must to be cleaned up and DEQ should only allow complete encapsulation for the new ash storage facilities. The existing dumps should be carefully excavated to minimize airborne particulates and moved away from rivers and flood plains to fully lined sites on Duke Energy's property.

Cap-in-place is unacceptable for **any** of the coal ash sites in North Carolina. Any "solutions" proposed by Duke Energy that do not excavate and move ash to fully lined, scientifically designed systems that fully encapsulate coal ash must be rejected. Without multiple, sealed bottom, side, and top liners, North Carolina's groundwater will always be at risk. Due to increases in extreme weather, more frequent hurricanes and massive rainstorms, groundwater models of 100 or 500-year floodplain are obsolete. Given the unpredictable fluctuations in the water tables and groundwater flows, there is no way that surface capping without properly engineered underlying bottom liners can protect groundwater in the coming decades.

Unlike Duke Energy's new lined landfill at Brickhaven in Chatham County, the construction of all new lined landfills should be scientifically engineered to protect groundwater in every way possible. Duke Energy's has a long history of widespread groundwater and surface water contamination, and criminal violations of the clean water act. Because of these repeated and gross violations that created health problems and drinking water contamination throughout the state, DEQ should require Duke Energy's new landfills to go beyond the minimal mandatory protections provided by current regulations. DEQ must carry out independent studies and obtain recommendations for the best liner technologies, redundant liners, and with multiple long-term safeguards. Scientifically based placements for baseline and ongoing groundwater monitoring wells should be established. These must be thoroughly and constantly monitored – with full, public, transparent, internet accessible, easily available data from the monitoring results.

Ground water and surface monitoring should be ongoing for a minimum of 50 years. This monitoring should be funded by Duke Energy, but carried out by independent, qualified field technicians and laboratories.

During excavation, construction, and filling of the landfills, all worker safety measures should be taken to prevent a repeat of the serious harms to worker health from the cleanup crews that worked on the TVA spill in Kingston, Tennessee. Again, unlike Brickhaven, worker safety, proper fitting and testing of N95, or better, particulate masks should be required for everyone that works in or around the coal ash, or that operates bulldozers, dump trucks, or heavy equipment that transport the ash. Wherever needed, full protective suits should be provided to workers. Regularly scheduled OSHA inspections, as well as unannounced and unscheduled OSHA inspections should be part of the clean-up and construction permits until all exposed ash is fully covered at each site.

While transporting existing coal ash dumps away from rivers and floodplains is essential, every effort should be taken by DEQ to ensure that the distances coal ash is moved is minimized and that the coal ash destinations are always kept on Duke Energy's property.

Once constructed, these new lined landfills should represent the best technologies and materials available – not materials that create short-term financial savings. The original existing dumps were disasters for public health, for NC communities, and for our state's waters. We have this one chance to remediate some of the damages and most importantly, to safeguard future generations from heavy metal coal ash contamination. Our state-wide re-design of storage systems for millions of tons of coal ash must be done right this time.

No coal ash sites, no coal ash communities should be considered low-risk, and all deserve full protection. Gross environmental justice violations have been committed by the past handling of coal ash placements and coal ash processing practices. Now, DEQ must protect all communities. The NC Department of Environmental Quality must ensure that none of these communities, which have experienced many decades of harm, are given less than full protections. No cap-in-place permits should be allowed.

Thank you,
John Wagner

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Peter Brezny

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

DUKE MUST HAVE FOR THEIR OWN EVIL DEEDS. WE HAVE HAD ACCESS TO GREEN ENERGY FOR DECADES AND THEY HAVE NOT CHOSEN TO USE IT. IT IS DUKE'S NASTY TOXIC MESS AND TAX PAYER SHOULD NEVER HAVE TO PAY FOR IT.

Regards,
Ann Harlan

RE: Public Comment on the Allen Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from Lake Wylie and the Catawba River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Allen, where it will keep polluting our groundwater, lakes, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Allen with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation will not significantly increase offsite trucking if Duke Energy uses an onsite landfill, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts would be minimal. Duke Energy's consultant estimates that 110 trucks currently travel near Allen on community roads every day. Excavation to onsite storage would add only two more trucks on community roads each day, compared to six more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Hal Trufan

Protect the Catawba river and all the down stream rivers by removing the coal ash that is stored at Allen Steam station. Completely remove it and safely store it away from a major water source that thousands drink from. Do it for the residents, do for our children's children. It is your duty to protect the resources of this great state. We expect you to do that and that Duke pay for it without passing those costs on to its customers. Thank you.

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Marla Brock

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

We learned yesterday that – as soon as the Feb. 15 comment deadline for the closure options evaluations had passed -- Duke Energy submitted an additional report that purports to estimate greenhouse gas emissions associated with the various closure options for its six unresolved coal ash sites in North Carolina.

We will submit a detailed response to this report shortly.

However, NCDEQ should disregard this submission because it was made after the department's deadline for Duke to submit its materials and outside the public comment period, denying the public an opportunity to respond to it. NCDEQ should also disregard this submission because it is irrelevant to the decision facing NCDEQ, which is to select a closure method that stops the ongoing pollution and continuing threat to our water resources posed by Duke Energy's leaking coal ash basins. Duke Energy operates coal-burning generating units at each of these facilities that emit huge amounts of greenhouse gases, and NCDEQ would lose all credibility if it allowed Duke Energy to leave the toxic residuals from burning coal in leaking pits forever because of Duke Energy's supposed concern for greenhouse gas emissions.

Nor should NCDEQ and the Cooper Administration delay their decision as a result of Duke Energy's gamesmanship. NCDEQ already knows that Duke Energy's cap in place and hybrid closure plans would leave millions of tons of coal ash saturated in groundwater, where they will continue to leach toxic pollutants into public waters for decades to come, and where they will continue to pose a risk of catastrophic failure. And it knows that tens of thousands of North Carolinians have called on the agency to protect our waters by removing the ash from the unlined lagoons and placing it into dry, lined storage or recycling for concrete, as is being done in South Carolina and Virginia. It is time to require Duke Energy to remove its coal ash from the unlined basins at these six sites.

Thank you for your consideration,
Nick Torrey

Dear Coal Ash Comment Administrator North Carolina DEQ: Allen,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Ruth Daniel
