Dear Ms. Lawson:

I support many of the changes made to the draft swine general permit. Specifically, I support the additional groundwater monitoring requirements, additional reporting requirements, and increased transparency. This draft is a needed step forward to protect the communities that surround these facilities and our air and water.

It is essential that NC DEQ fulfill its commitment to achieving and maintaining the fair and equal treatment of North Carolinians regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of the Permit.

With that commitment in mind, I encourage NC DEQ to move forward with this draft permit and ask that they go even further by:

- Requiring regular submission of waste management records detailing what is sprayed, when it is sprayed, and what it is sprayed onto.
- Requiring the submission of records that permittees are already obligated to create and maintain. This increased reporting will make it easier for department staff to cross-check data with community observations, enable more rapid identification of compliance issues, and better assess seasonality of practices.
- Require electronic filing of records made under the permit for ease of access for department staff.
- Require the use of technology that will automatically prevent prohibited practices like spraying waste in the rain or spraying when it is too windy.

It's critical that NC DEQ continues to put impacted communities and our waterways first.

Thank you.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Martin Hazeltine

Christine, I'm commenting on II.7

The proposed Sludge incorporation of 24 hours will not allow proper drying of the application site causing undue soil damage due to the working/tillage of wet soil. Whereby causing of deterioration of soil health, increased compaction and other unintended consequences of generally approved BMP's of soil management. Thank you for your consideration of these comments.

Hello Christine,

My 'input' is attached.

I'd be happy to clarify anything that is unclear.

Phosphorus and submitting field data for aggregation at the watershed level are clearly priority issues, integral to the current permit conversation and DWR's mission (even if beyond your bounds)..

These are urgent topics for thinking and action.

Cheers for the good work you do,
Sue Ellen

Christine Lawson,

I'm writing to request stronger pollution controls and more transparency in the general permit for swine waste management.

Specifically, I'd like to see mandatory groundwater monitoring when there's evidence pathogens or antibiotics from industrial animal operations have seeped into groundwater. The permit should also require swine operators to use the state's phosphorus loss assessment tool, and limit phosphorus application where necessary to prevent or mitigate nutrient pollution.

Finally, it should be revised to require monthly electronic submission of reports on the contents of cesspools; the volume and location of spraying, the crops sprayed, and the results of soil monitoring of the fields. This submission is necessary so this data is available to the public.

Thank you so much for your consideration.

Date: Monday, December 3, 2018 6:13:43 PM

CAUTION: External email. Do not click links or open attachments unless verified. Send all suspicious email as an attachment to Report Spam.<<mailto:report.spam@nc.gov>>

Dear Ms Lawson,

I'm very concerned about the environmental impacts of huge factory-style hog farms.

While the rules could and should be tougher on the backwards, polluting practices currently used by Big Hog, the new proposals represent steps in the right direction. These include "groundwater monitoring, rain breakers - systems that automatically shut off spray field systems when it rains - daily documentation of hog deaths and disposal methods, as well as restrictions, depending on the wind, on the spraying of the hog waste. The department could also conduct surprise inspections rather than giving farms advance notice, a requirement sought by environmental justice groups. Accurately completing an odor checklist would also be a condition of the permit," per NC Policy Watch.

Please tighten the rules governing big hog farms.

Thank you,

Deb Brown

However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

In addition, when industrial hog or poultry farms produce as much waste as a small town, they should be required to operate a sewage treatment facility and NOT be allowed to have "lagoons", because they pollute the air and can overflow and pollute the ground and poison animals and crops as well. Industrial pollution of any kind must be prohibited, monitored, and polluters severely fined, required to clean up their mess, and punished when they do not comply. It is common sense.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Ms. Lawson,

I am writing to submit comments to the NC DEQ regarding the Draft General Swine Permit.

The majority of this industry in NC is not "farm families" as they are trying hard to portray themselves. It is Chinese owned corporations making hundreds of millions dollars every quarter and they do not care about local NC communities, our environment, our health or our families. I wholeheartedly support creating much stronger rules governing large hog farms. I currently live in Asheville, but I grew up (and my family still lives) in Wilmington, in close proximity to the hog farms, and their waste and outdated practices with no consideration for neighbors or local communities or our environment. I have seen first-hand the devastating impacts that occur following storms and hurricanes in the region. I have also been harassed by employees of large hog farm companies regarding my activism against their egregious community practices. This issue and the need for stronger regulations on industrial polluters is a matter that affects our entire state, and especially our beautiful coastal land and rivers.

For these reasons, I support much more stringent rules and regulations on the practices currently used by large hog farms in NC. The new proposals represent steps in the right direction, including the groundwater monitoring, the rain breakers and systems that automatically shut off spray field systems when it rains, more daily documentation of hog deaths and disposal methods, as well as restrictions on disposal and spraying of waste. The department should also conduct more stringent surprise inspections rather than giving farms advance notice. Accurately completing an odor checklist should also be a condition of the permit. I support much more stringent regulations on large hog and other industrial farms in NC.

Please strengthen regulations and protect real NC families, not Chinese conglomerates and other corporations that could care less about our people, animals, communities and environment.

Thank you,
Kim Porter

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit as the basis for better controlling the potential hazards related to swine farming.

In my opinion factory farms have polluted our beautiful state of North Carolina's air and water with far too little regulatory oversight. The state has a duty to protect our environment to ensure our citizens are secure and our children can enjoy the Beauty of our state in the future.

The proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions are steps forward. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. Even at a microscopic level hog waste should not be shared with neighboring properties who are not profiting from or engaged in the hog farming process.

Ending the practice of giving farms a head's up on inspections is simply common sense. Every inspection should be unannounced so the inspector can see operations as usual and not operations staged for a planned inspection.

Thank you for the opportunity to provide input before implementing these rules!

Sincerely,
Brian Kasher

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

This matter became of even greater significance to me following Hurricane Florence. There were news reports of hog farms' uncontrolled runoff going into the Cape Fear River and further polluting/poisoning the water we drink and the air we breathe. I am a voting taxpayer. I never felt factory farming was a good idea and there is also the factor of animal cruelty/inhumane treatment in the process. As a citizen I am paying for the water through the Cape Fear Public Utility Authority. Water from the Cape Fear River is used for drinking, bathing and cooking. At this point, I, like many others, feel that we must purchase bottled water, in addition to adding a water filter in my home. These are two expenses that I would hope will not be necessary in the future. Also, the plastic bottles are not so readily recyclable at present. Therefore, I hope that you will consider the citizens of North Carolina and reform the hog farm permit renewal to control the pollution and restrict runoff in the water and air.

Thank you for considering public input before implementing these rules!

Sincerely,

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

The fact is that hog "farming" is now actually a high polluting industry which deals with waste in a totally unsatisfactory manner. We run human waste through cleaning systems but just hold hog waste until a dam blows out and it goes into our rivers. This is not OK. This industry must NOT pollute. It is up to THEM to clean the waste produced and prevent mistakes. BTW the stink of indoor hog raising and lagoons is NOT OK either. Back in the day when hogs were outside and in far lesser numbers this was not nearly the problem it is today. Clean it up or move to a more permissive state.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. Nitrogen in the atmosphere is a bad thing.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Todd Dickinson

From: John Runkle, Attorney
Re: Draft Swine Waste Management System General Permit (AWG100000)

In reviewing the draft permit, I see the term “discharges” used in Section I. 1. a. was replaced by the term “outflow.” “Discharge” is defined in G.S. 143-213(9) and is used throughout the agency rules and the draft general permit. I have not been able to find a definition of “outfall” in the statutes or rules. “Outfall” seems to me to be a much more limited term than the broader term “discharge.”

How does the agency define “outfall”?

Should a definition be included in the permit?

What is the rationale for making the change?

The subsection also needs editing. The term “ditches” in Section I. 1. a. should be singular.

Please notify me of any changes you make.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Dear Ms Lawson.

Yuk. It's been what 20 years since Hurricane Fran was supposed to mandate a change in the industrial "farming" of hogs. But all I see is studies and stalling, with no solution in sight. NC needs to legislate stronger rules against open pit lagoons to protect our state from overflows and the day-to-day grossness of it all. The companies that profit from hogs should be responsible for the waste they produce.

Thank you,

Geoff

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

We live very near a hog farm and ask you to protect our family from the danger of the odor and the chemicals.

Sincerely,
Rosemary Stark

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new and more relevant rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. They are causing health and environmental issues that will affect us all and our children.

I appreciate some of the proposed regulations regarding spraying but I would like to see a rule requiring the spray systems to more directly spray toward the ground.

I appreciate ending the practice of giving farms a head's up on inspections.

Do think of the future and broad implications rather than narrow private interests.

Sincerely,

The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Marie Michl

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Bonnie Cooper

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

We are all downstream. Currently hog farms are allowed to pollute both the air and water. This needs to be much better controlled, especially in light of the problems created by flooding due to storms.

Thank you for considering public input before implementing these rules!

Sincerely,
Catherine Nisselson

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

I speak from experience. My family owns a small farm in Jones Co, NC, and we have hog farms close by. After Hurricane Florence, our land was covered in hog sludge from heavy rains and flooding of the Trent River. How do I know? Our farm stunk for weeks. It smelled like animal feces, and infiltrated our barn, farm equipment, and made a mucky sludge over everything. We found dead fish on our land.

Why do we allow hog farms to self regulate? It isn't healthy for our air, land, or water. Merely spraying the lagoons out prior to a storm is not the answer. The land around these hog farms are then flooded just like our farm was, and the polluted water flows into streams and rivers, making its ugly murky way to neighboring properties and even to our sounds, estuaries, and ocean. It is a disgrace and it is a health hazard.

Thank you for considering public input before implementing these rules!

Sincerely,
April Hardee

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Leslie Simon

Dear Program Manager Christine Lawson,

I am a North Carolina native, daughter of a farmer. Because of my serious concerns about the environmental impacts of the hog industry, I have eaten almost no pork for many years. I am writing to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those systems to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I would also appreciate ending the practice of giving farms a heads up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. I am an advocate for clean water and air, and these factory farms are diminishing both. I hope you will, with new rules, encourage these farms to move toward using the hog waste for methane production, strictly oversee the waste lagoons, and keep neighbors from major pollution.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

I think it is completely outrageous how many pigs were mistreated cruelly and allowed to drown in their enclosures in the last hurricane. That is completely inhuman. I think any hog farm that allowed that to happen and did not have an escape plan for their animals should be very highly fined and held liable to legal action. How can people in any conscience at all allow animals to suffer? Unconscionable. Punish those farms !!

I for one have stopped eating any pork products in protest against the pig farms. And I have educated anyone who will listen to me about the fact checking I have done after the hurricane Regarding the cruelty to the livestock.

Thank you for considering public input before implementing these rules!

Sincerely,

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Marilyn Brown

Dear Program Manager Christine Lawson,

I write to support proposed new rules for the hog farm general permit.

For too long, factory farms have been allowed to pollute state air and water with little oversight. The farms' neighbors are held hostage to corporate profit, unable to protect their right to enjoy their own lives and property.

I particularly like the proposed rule requiring automatic shutoff of spray field systems when it rains, and regulations for spraying based on wind conditions. In addition, I would like a rule requiring those systems to spray towards the ground instead of into the air and being picked up by the wind, blowing waste onto neighboring properties.

I also appreciate ending the practice of giving hog farmers a head's up on inspections.

Thank you for inviting public comment before implementing new rules.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. As elected leaders in our country, we need to know you are protecting our health and the health of our children, including your own. You may not live in that area, but with weak pollution control, we are all at risk no matter where we live. it's just a matter of time.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule to require those systems spray more directly toward the ground, rather than shoot into the air and be picked up by the wind. This way the waste won't blow onto neighboring properties.

We also appreciate ending the practice of giving farms a head's up on inspections. It's understandable that they should not be given the chance to cover their tracks ahead of time.

Thank you for your leadership regarding pollution issues. Your courage to incorporate these stringent guidelines and your consideration of public input before implementing these rules are very much appreciated!

Sincerely,
Helen Fisher

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

I grew up on a farm (which I now own) and I am well aware of how noxious an inadequately managed hog farm can be for its neighbors. It can be not just unpleasant, but also unhealthy for all living close to a hog farm - actually you do not have to be living all that close if the wind is right.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Brett Little

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to spray directly toward the ground, rather than shooting the waste into the air and getting picked up by the wind, and the the waste blowing onto neighboring properties!

Even to just have a neighbor having a pig-farm is bad, because the smell of those cannot be stopped by any measure, the neighbors will suffer from those farms as long as they are allowed to operate! Even just driving by is pretty bad! I visited my family who in such a situation,, and I KNOW It!

I appreciate ending the practice of giving farms to be warned of a coming inspection. It prevents the law from working! Pig farm owners should should not be able to cover their tracks ahead of time. It undermines the law!

Thank you for considering public input before implementing these rules!

Sincerely,
Barbara Nettesheim

Dear Program Manager Christine Lawson,

Save Our Water

I support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties (READ: NEIGHBORS AND THEIR CHILDREN).

I also appreciate immediately ending the practice of giving farms a head's up on inspections. No one should be able to cover their tracks ahead of time--the Fire Marshall doesn't make an appointment, the Health Department doesn't warn a restaurant; it seems we already understand the importance of an unannounced visit.

Thank you for considering public input before implementing these rules!

Sincerely,
Beth Stanberry

Conditions for pigs are I humane. These are intelligent animals & deserve best conditions not crowded & filthy environments. Corporate farms created this unbelievable condition. Respect the animal before u slaughter & rush off to marketplace. Family farmers did this correct & proper. Pigs are one of cleanest animals on planet. Clean up their environment. They don't deserve wallowing in the filth in these corporate buildings.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,

Dear Program Manager Christine Lawson,

Toxic Farm Waste
Subject: Make hog farms clean up their act!

Yesterday, another federal jury ruled against Smithfield Foods and for one of their farms' neighbors who have suffered the noxious consequences of Smithfield's shoddy waste disposal practices. But Smithfield's penalty is puny, and they got off easy. And they're going to keep getting away with poisoning the quality of the air and water of the people unless state and Federal environmental regulators make them change their ways. That's exactly what the Department of Environmental Quality (DEQ) wants to do before they renew Smithfield's permit.

The permit for North Carolina's hog farms is up for renewal, and the state wants your opinion on new rules.

A stronger state regulation would require hog farms to provide proper sewage disposal the same as is required for Human waist through Sewage treatment plants, and keep hog waste out of our air and waterways. Corporate hog farms would be required to provide storage tanks and not open sewage ponds, and Sewage would be pumped to Sewage refineries for processing according to the same health standards used for human waste.

The state Department of Environmental Quality needs tougher new rules. Smithfield's farms are going to have to comply if they want to keep operating in our state. The rules are tied to the renewal of their permit. Before a permit is renewed,

The victims of hog farm waste disposal are among the disproportionately poor and people of color, living in rural areas. Smithfield has the political and financial power to make change. Smithfield can not ignore it's responsibility to ensure a healthy environment for the people who live and work on and near these Hog farms.

It's in Smithfield power to make the hog farms set better ground rules and provide adequate sewage disposal Facilities that protect all of us, particularly the most vulnerable. Tell DEQ you support tough new rules for Smithfield.

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover

However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. But ultimately, I would refer to see the wastes handled better, in a way that does NOT involve lagoons and their stench and which are NOT subject to flooding at all!

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time. If they are worried about their operation possibly failing your inspections, they should move rapidly AWAY from the CAFO system and return to rearing hogs on small family farms and composting the wastes to improve land fertility instead of destroying both it and their neighbors' lives with their lagoons and spraying raw hog sewage, SO nasty! Another hurricane WILL come again and flood their CAFOs, killing hundreds if not thousands of hogs and poisoning the Sound, destroying the Coastal ecology and economies. Prevent all that and harden hog farms against climate change by limiting the number of hogs and ensuring that the wastes are NEVER going to pollute! Slam Smithfield with the harshest fines possible for ALL their violations, so they will think about becoming a better neighbor and a kinder hog raiser.

Thank you for considering public input before implementing these rules!

However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

I also would like to see hog farms held to the same standards as others with noxious, possibly toxic, sewage. Install a sewage system, as in a system with a settling tank and drain field, both adequate for the volume of waste produced. This would eliminate the odor problem and decrease the pond overflow during heavy rains or hurricanes.

If this is too small, a system of adequate size would be required. I'm fairly sure that the corporations that own or control these farms could find the money to make it happen.

Thank you for considering public input before implementing these rules!

Sincerely,
Donald Rumph

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. The density of hogs in eastern North Carolina and the current management guidance negatively impacts the quality of life of citizens, both directly and indirectly.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules! Please do more to protect our public trust resources!

Sincerely,
Christine Voss

Dear Program Manager Christine Lawson,

I support the proposed new rules for the hog farm general permit.

Factory farms have been allowed shift the cost of their operations onto the public by polluting our air & water without the expense of managing their waste. NCDEQ has provided too little oversight on this public health issue. These farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own private property & lives.

I support the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. In addition, I would like to see a rule requiring spray application more directly toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

Let's END ending the practice of giving farms advance notice on inspections too.
Polluting farmers should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rule changes!

Sincerely,
Rebecca Csiszar

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Casey Horvitz

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Jana Green

December 10, 2018

Jon Rissgard
Section Chief - Water Quality
NC Department of Environmental Quality
1601 Mail Service Center
Raleigh, NC 27699-1601

Dear Section Chief Rissgard:

I am writing to you today on behalf of Coastal Carolina Riverwatch, to support many of NCDEQ's proposed improvements to permits for hog operations.

North Carolina, the nation's second largest hog producer has a chance next year to require stronger pollution controls and more transparency from the pork industry and address our waste problems.

We support NC DEQ's draft permit because it gives added protections for the communities surrounding swine operations. These increased protections include: groundwater monitoring requirements, additional reporting requirements - through submission of an annual certification form, and increased transparency.

It is essential that NC DEQ fulfill its commitment to achieving and maintaining the fair and equal treatment of North Carolinians regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of the Permit.

While we appreciate and support the changes to the permit reflected in the current draft, we call on NC DEQ to go even further by requiring regular submission of waste management records detailing what is sprayed, when it is sprayed, and what it is sprayed onto. NC DEQ should require the submission of records that permittees are already obligated to create and maintain. This increased reporting will make it easier for department staff to cross-check data with community observations, enable more rapid identification of compliance issues, and better assess seasonality of practices. In addition, NC DEQ should require electronic filing of records made under the permit for ease of access for department staff. Lastly, we recommend that NC DEQ require the use of technology that will automatically prevent prohibited practices like spraying waste in the rain or spraying when it is too windy.

Many of the added protections to the current draft Swine General Permit are needed and should not be taken out during the drafting process. Thank you for your all that you do to protect the environment and all of our impacted communities with more transparency and greater pollution controls.

Sincerely,

Joel Dunn
Secretary of the Board
Coastal Carolina Riverwatch

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Diane Wynne

Dear Program Manager Christine Lawson,

I live near the NE Cape Fear River. As late as the 1980s my family and I used to swim in the river at Castle Hayne. Since the of the intensive hog 'farming' with the lagoons in the counties north of New Hanover, swimming in the river is not advisable. I haven't purchased any product with the name Smithfield on it in 20 years and don't eat pork that I know came from a CAFO in eastern N.C.

The CAFO mess in eastern N.C. needs to be cleaned up. I wish it could be done without hurting the farmers who own and work the land. The way they have been treated by Smithfield is a disgrace. At least some common sense rules could be a start.

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
maureen welch

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. Who was the non-logical person who designed this upwards sprayer? A sociopath? Common sense is lacking in this design. Perhaps a brand new design is needed. Something that doesn't spray filth at all.

I'm all for people making a living. But not at the expense of quality of life for others.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time. Another questionable practice that should be ended now.

Thank you for considering public input before implementing these rules!

However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

In addition, when hurricanes and other major climate events occur, the hog lagoons overflow and pollute the rivers, adding to the misery and devastation of people who are already suffering. Moreover, it creates a health hazard and a clean up cost that affects all North Carolinians.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

People should not have their quality of life ruined by noxious hog waste. They should not be driven into their homes to avoid the effects of air and water pollution. It is the job of the State of NC to protect the citizens not the profits of multinationals and big business. It is a privilege to operate in this great state and businesses should develop processes that protect the environment.

We need strict regulations that put the environment first; that protect the health and well being of the community ; that require the business to pay for the damages that occur as a result of their business practices. We must have effective oversight and demand adherence to regulations.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Dear Program Manager Christine Lawson,

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power. I writing in support the proposed new rules for the hog farm general permit.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Patricia Cabarga

Dear Program Manager Christine Lawson,

we are sovereign. Government is made by the people. Your job is to represent us not foreign corporate interest.

This corporation must be required to install industrial sewage treatment plants as this waste exceeds that of the entire northeast human waste

Do your jobs as this is destroying not only the lives of the people around the farm but the lives, and life of those connected and effects the bodies of water it flows into.

This is corruption as it now stands.

Do your jobs! Stop allowing this hog farm to destroy this state because right now it is.

There is no other decision to be made other than commercial grade, human type sewage treatment plant to be installed immediately

I'll thank you when you choice to stop killing us.

Sincerely,
Karen Golden

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Sylvia McCoy

Dear Program Manager Christine Lawson,

This letter is in favor of the proposed rules for hog farms.

Under the present system, hog farms have polluted North Carolina waters and air, causing misery and disease among neighbors who have to endure the stench and the filth blown and/or seeped onto their homes and yards.

The proposal to shutoff spray when rain falls is good. The sprays should be directed toward the ground, however, not into the air where wastes can be blown by the wind.

Ending the forewarning of farms when inspections are about to take place is also a good idea. They should not be able to clean up things just before an inspector will arrive.

Thank you for receiving these comments. I hope that you will make changes necessary to reduce damage being done by big hog operations.

Sincerely,
Stephen Weissman

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

Huge companies have to work harder to catch up with the current needs of our planet and of their neighbors. They can afford to find new ways to keep neighbors and the earth safe from the harms of their waste. Their upward trajectory of money for their own leadership and employees prevents them from setting some limits on corporate greed. Please compel them to use their money to proactively protect others from the harms of their industry.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Robert Fingerman

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

In addition to my concerns below, it is becoming very apparent that NC needs to consider modifying hog operations in light of the increasing frequency of devastating flooding. Not only is this flooding causing life threatening issues for anyone expose downstream, thousands of hogs are needlessly drowning due to a farmer benefiting financially from allowing hogs to drown, where an insurance payoff is guaranteed versus incurring the expense to evacuate the animals. Hog facilities must not be allowed to rebuild in flood planes are required to construct housing that protects animals from flood waters.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. What I'd like more than anything is to see huge agricultural hog farms shut down. It would be better for people, the environment and for the hogs if we went back to smaller, family type operation. It's a win/win for everyone but BigAg and the legislators being paid off by Smithfield and others like them!

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Karen Kaser Odor
278 Fryling Ave SW Concord, NC 28025-5776

Dear Program Manager Christine Lawson,

I suggest that you study what is done in The Netherlands to deal with hog manure. You will learn that it is possible to use the methane released for renewable energy. What a novel thought.

Meanwhile, I support the proposed new rules for the hog farm general permit, since they are at least an improvement over what is happening now.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Michael Reed

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
George Phillips

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Walker Reagan
6001 Fordland Dr Raleigh, NC 27606-4476

Industrial hog farming is not only unfair to any living nearby, but also cruel and just plain mean to a very intelligent and sensitive animal. Hog are fourth in science estimation of animal intelligence. They're way smarter than our beloved cats and dogs. Just no excuse for all this..

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. This is, after all, just "the cost of doing business." I am happy that our state officials are willing to put the good of our environment and citizens over the desires of "for profit" companies. Given the results of our recent hurricanes and the awful environmental impact on flooded hog waste ponds, the changes to the permit seem even more timely.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Dear Program Manager Christine Lawson,

I support the proposed new rules for the operation of hog farms.

Given the courts have sided with plaintiffs living near hog farms, it is obvious modern waste treatment practices must be implemented.

It also makes no sense to tip off the farm operators prior to an inspection. This is a license to deceive no one.

Enforcing new spray rules with surprise inspections should help the farmers (potential protection from lawsuits) and make the surrounding communities more livable.

Taking care of waste products is part of every business plan. Hog farmers do not merit a special exemption.

Thank you.

Hog Farms, and other factory farms, must be strictly regulated to NOT pollute our air and water. We and wildlife NEED clean air and water to live and thrive. Businesses should not be allowed to pollute their surroundings for profit.

Please FIX this problem TODAY!

Sincerely,
John Comella

The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a heads up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Ruth Bauer

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

These factory farms have been allowed to pollute our air and water with little oversight for too long! The neighbors of these farms have suffered the degradation of their environment, with little recourse to protect their basic rights to enjoy their own property and lives. Those neighbors typically have little to no political or financial power to successfully oppose the businesses who profit from this injustice.

I particularly support the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those systems to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. These are just common sense protocols that should have always been a part of such farms.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Sara Hart

Dear Program Manager Christine Lawson,

We write to support the proposed new rules for the hog farm general permit, though we see them as only a first step in the right direction.

We have to be sure that these farms are not polluting the air and water.

Fecal matter from pigs should be treated just like we treat human sewage. There is a danger of spreading antibiotic resistant bacteria in the method used now, in addition to the general pollution of the air and water.

We would like to see closed hog waste digesters that will not spill out into drinking water and communities with each flooding incident. These floods will be a common occurrence from now on, not a freak 100 year event. We actually question the placement of hog farms in what are now floodplains.

We particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions.

However, We would like to see a rule requiring those systems to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. There must be better ways to spread this residue rather than aerosolizing it.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,

Dear Program Manager Christine Lawson,

I would invite you to take a drive through hog country where mile after mile, you will see the giant metal buildings and lagoons that farmers try to hide behind tree lines. Visit Duplin, Sampson, Bladen counties, roll your window down and take a big long whiff of the air that will most certainly make you choke. Many times, especially before a hurricane, you will see giant sprayers soaking the fields with hog waste from the lagoons. And as most of us know, the runoff from the fields will most certainly wind up in our streams and rivers.

Hey forget about GenX, we're all probably full of hog poop toxins. Whoever made the decision to allow so MANY hog "farms", not really farms, but just metal cans which hold animals, needs to live right in the midst of these places. They need to drink hog shit everyday and breathe in the stink that fills the air. North Carolina is a cesspool, thanks to our politicians.

I write to support the proposed new rules for the hog farm general permit.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Eugene Moore

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. Economic development is important for our state, but an industry that befouls the air and water and does not clean up after itself is a hindrance to development: no one else can work, or sometimes even live, on nearby properties.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a heads-up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Sharen Oxman

Dear Program Manager Christine Lawson,

In our great state of North Carolina, we can have healthy rivers and watersheds, clean drinking water, unpolluted wells, healthy pigs, healthy pork and successful farmers.

We don't want or need polluted rivers, polluted drinking water, sick pigs, contaminated pork or failed farms.

Corporate agriculture doesn't get an exemption from healthy environmental practices.

Family farms need our support in North Carolina.

Corporate farms need stringent regulation in our state.

We need strict rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

This, like numerous other issues (climate change, food labeling, gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Shirley Knapp

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

The proper role of the Federal EPA and State DEQ's is not to serve as an extension of the Chamber of Commerce and pander to corporate interests, but rather to protect and preserve the environment that supports all life on a planet with finite diminishing resources and one rampant with societal inequities.

As a citizen of the State of North Carolina, I implore the DEQ to assume its proper role to protect and preserve to the best of its ability given the resources dealt it by the legislative branch of government. I seek better ground rules that better protect all the people (especially the most vulnerable) and all creatures great and small. I call for the DEQ to take a moral stance for all the victims of hog farm waste disposal, most who are disproportionately poor and people of color who through no fault of their own simply lack the political and financial clout to protect themselves from the mismanaged pollutants that are the byproduct of industrial agriculture.

No longer must factory farms be allowed to pollute our land, air and water with little oversight and enforcement for the sake of corporate profit alone. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Linda Ward

Dear Program Manager Christine Lawson,

I am writing to support the proposed new rules for the hog farm general permit.

For WAY TOO LONG, factory farms have been allowed to pollute our air and water with little oversight. These farms' neighbors are held hostage to corporate profit, with little recourse to protect their BASIC RIGHT to enjoy their own property and lives. These neighbors are frequently poor and people of color, with little else to enjoy except the quality of where they live and with little or no political or financial power.

I particularly like the proposed rule requiring AUTOMATIC SHUTOFF of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would REALLY LIKE TO SEE a rule requiring those system to more directly spray TOWARD THE GROUND rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. THIS JUST MAKES COMMON SENSE!

I also appreciate ENDING the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time, FOR HEAVEN'S SAKE.

Thank you for considering public input before implementing these rules!

Sincerely,
Cheryl McGraw

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Edward Brophy

Dear Program Manager Christine Lawson,

These Hog Farms make huge profits! They need to NOT pollute our state. This is 2019 (almost), these polluting industries must clean up or they must go. I support the proposed new rules for the hog farm general permit. If not, I, my family and friends will stop eating pork and I will work to make sure others follow suit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Cathleen Pritchard

Dear Program Manager Christine Lawson,

I write to voice my concern over the abuse and cruelty that the animals on these farms endure.

Is it not enough that on a daily basis these poor creatures are subject to fear and pain in the slaughter process but then in addition many farm workers have been caught torturing them for sheer pleasure or frustration. These operations need to be managed by a division that has got to endorse the humane treatment of farm animals and those that violate these rules should be held responsible and prosecuted.

The fact that during the hurricane these animals were abandoned in small cages, with no room to move and the flood waters rising...this is how millions of them perished. Shame on this industry!!!

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Stefon Lira

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

I eat pasture-raised local meats free of hormones and antibiotics AND I oppose the animal cruelty, and danger to our environment and human neighbors represented by factory farms. I'd like to see them disappear, but for now, a few modest rule changes are a more than reasonable start.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time. No other business in NC is given this consideration.

Considering that we (ALL RESIDENTS OF NC) have noticed that these farms cause damage to neighboring properties EVERY TIME it floods or we have a hurricane, it would be nice to make these farms plan better to prevent the inevitable destruction. Paying afterwards is not enough.

Adding protection for the hogs they ruthlessly torture and dispose of as if they were a piece of paper would be a step in the right direction also. It should NEVER be okay to allow them all to drown/die rather than try to save them just because "insurance will cover the loss". These are actual living creatures! They should be protected from harm, not thrown out like trash!

Thank you for considering public input before implementing these rules!

The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Cynthia Anderson

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. Dear Program Manager Christine Lawson,

I support your effort for meaningful reform of the CAFO regulations.

As a resident of Wilmington, NC my community is downstream from many of these operations. That includes our water supply.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I would also like to see a solution to overflow from hog waste lagoons due to flooding. I hope that this will also be a focus of improved regulations.

Thanks for considering public input in this important matter.

Sincerely,

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. The condition in eastern North Carolina after the recent hurricanes and vast flooding will probably happen again. These hog farms MUST do more to contain their wastes and prevent flooding into streams and eventually the ocean.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Amy Pfaffman

And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule preventing the spraying of any manure, and for use of a manure spreader or similar machinery to prevent aerosolizing the bacteria and viruses therein. From a public health standpoint, this type of fertilization should have never been permitted.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time. And violations need to be met with harsh daily fines and zero tolerance for subsequent infractions. There should be no computational benefit for a farm to operating in violation. Cancel permits immediately and for a minimum of 3 years on a third violation. Three strikes = OUT of business for polluters.

Thank you for considering public input before implementing these rules!

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Youssef G

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

As a resident of coastal NC, I experienced first hand the impact the current, weaker regulations had on our beaches. After hurricane Florence the runoff that entered the streams and rivers and ultimately the ocean, made the waters along our coast unsafe for swimming for several weeks. We can do better in protecting our environment.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

I speak from experience. My family owns a small farm in Jones County, NC, and after Hurricane Florence, Jones County was flooded. Our farm land was covered in stinky mud and dead fish from the Trent River. It was a horrible smell, which we sometimes have previously smelled of the wind blows just right because we have neighboring hog farms. But this stinch was worse than ever before! Please hold hog farms accountable for polluting our air, water and land.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
dale rio

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. Dear Program Manager Christine Lawson,

There is no reason for so many pigs to be brutally abused and slaughter. Look at the waste! There are so many alternatives to eating other food besides meat. Pigs are wonderful animals and don not deserve this. Would you want to be treated like this, taken away from your family and be beaten and killed. NO EXCUSE!!!! PLEASE STOP SLAUGHTER FARMS!!!!

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Ronald Godfrey

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

I also want to share my concern that NOT ENOUGH is being done to prepare hog farms for extreme weather events like the kind of hurricanes we've been experiencing lately.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

That we even have so many of these factory farms is an abomination! Have you been to Topsail Beach recently? Well, I was there this summer, and could smell the hog farms even at the beach. But it is not just offensive to me personally, these places are incredibly damaging to the environment and to the health and well-being of the people who have to live nearby.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

It is also important to note the better technology exists for hog farms than is currently being utilized. The better technology is marginally more expensive, but as many of the hog farms are owned by foreign entities, making sure they protect the health and quality of life of people living around the farms is critically important. They might lose a little profit, but they should bear that cost rather than degrading the quality of life for the area's residents.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Rita Mullis

Dear Ms. Lawson,

I encourage you to make the new General Swine Permit as stringent as possible, including following recommendations from the stakeholders of the North Carolina Environmental Justice Network.

The swine industry of Eastern North Carolina should pay for its own pollution. They should not be allowed to simply make their neighbors bear the burden of their pollution (odor, wellwater contamination, property value diminution and so on). For too long the industry has been allowed to impose these costs without consequence.

I am convinced that sensible health and environmental regulation supports robust economies and preserves North Carolina as a place that can support generations of healthy people. A stringent and robust General Swine Permit is a crucial piece in that effort.

Respectfully,
Melissa Malkin-Weber, JD, MPH
Durham NC

December 4, 2018

Jon Risgaard
Section Chief - Water Quality
NC Department of Environmental Quality
1601 Mail Service Center
Raleigh, NC 27699-1601

Dear Mr. Risgaard:

I am writing to you today on behalf of Coastal Carolina Riverwatch, to support many of NCDEQ's proposed improvements to permits for hog operations. North Carolina, the nation's second largest hog producer has a chance next year to require stronger pollution controls and more transparency from the pork industry and address our waste problems.

We support NC DEQ's draft permit because it gives added protections for the communities surrounding swine operations. These increased protections include: groundwater monitoring requirements, additional reporting requirements - through submission of an annual certification form, and increased transparency.

It is essential that NC DEQ fulfill its commitment to achieving and maintaining the fair and equal treatment of North Carolinians regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of the Permit.

While we appreciate and support the changes to the permit reflected in the current draft, we call on NC DEQ to go even further by requiring regular submission of waste management records detailing what is sprayed, when it is sprayed, and what it is sprayed onto. NC DEQ should require the submission of records that permittees are already obligated to create and maintain. This increased reporting will make it easier for department staff to cross-check data with community observations, enable more rapid identification of compliance issues, and better assess seasonality of practices. In addition, NC DEQ should require electronic filing of records made under the permit for ease of access for department staff. Lastly, we recommend that NC DEQ require the use of technology that will automatically prevent prohibited practices like spraying waste in the rain or spraying when it is too windy.

Many of the added protections to the current draft Swine General Permit are needed and should not be taken out during the drafting process. Thank you for your all that you do to protect the environment and all of our impacted communities with more transparency and greater pollution controls.

Sincerely,

Dennis Howard

Ms. Lawson:

I am writing in support of the N.C. DEQ's proposed rules to govern swine farm operations. I feel the new proposed guidelines are a modest first step in curtailing the way that large-scale animal farms in North Carolina intrude upon the rights of neighbors, through offensive odors, inadequate waste disposal which is vulnerable to flooding and may cause groundwater contamination, also the infestation of insects associated with these farms. Thank you for considering enacting the strongest possible rules to govern these hog farms and protect their neighbors' rights.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. I lived in eastern NC for 20 years. The threat to air and water quality posed by swine production is very real. I support any regulation or oversight that limits these forms of pollution. The technology exists to eliminate this type of pollution. The current and future citizens of NC deserve such measures. Who is profiting from these practices?

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

I would like to see the addition of these provisions added to the permit

- Requiring regular submission of waste management records detailing what is sprayed, when it is sprayed, and what it is sprayed onto.
- Requiring the submission of records that permittees are already obligated to create and maintain. This increased reporting will make it easier for department staff to cross-check data with community observations, enable more rapid identification of compliance issues, and better assess seasonality of practices.
- Require electronic filing of records made under the permit for ease of access for department staff.
- Require the use of technology that will automatically prevent prohibited practices like spraying waste in the rain or spraying when it is too windy.

Thank you,

Douglas Leckie

Christine Lawson,

Dear Ms. Lawson,

I am concerned about continued pollution originating from industrial swine facilities in North Carolina that impact communities and our public waters. While you are revising the permit please make sure to include the following important changes.

Smithfield Foods, the multinational company that makes hundreds of millions of profits annually, and other corporations that contract with North Carolina operations for swine production, should share responsibility for managing the waste produced by the animals they own.

DEQ needs to collect sufficient data to assess hog waste pollution and make it publicly available.

DEQ should require mandatory groundwater monitoring where there is evidence of off-site impacts (or could simply say pollution of) to our water table.

DEQ should require swine facilities to evaluate the risk of phosphorus pollution from land applied animal waste, using an established formula that was created at great taxpayer expense.

Operators must be required to submit records to DEQ for public review of land application of waste, cropping, stocking, and soil or lagoon sampling to better inform DEQ of pollution risks and improve transparency.

Thank you very much.

Christine Lawson,

Dear Ms. Lawson,

I am concerned about continued pollution originating from industrial swine facilities in North Carolina that impact communities and our public waters. While you are revising the permit please make sure to include the following important changes.

Smithfield Foods, the multinational company that makes hundreds of millions of profits annually, and other corporations that contract with North Carolina operations for swine production, should share responsibility for managing the waste produced by the animals they own.

DEQ needs to collect sufficient data to assess hog waste pollution and make it publicly available.

DEQ should require mandatory groundwater monitoring where there is evidence of off-site impacts (or could simply say pollution of) to our water table.

DEQ should require swine facilities to evaluate the risk of phosphorus pollution from land applied animal waste, using an established formula that was created at great taxpayer expense.

Operators must be required to submit records to DEQ for public review of land application of waste, cropping, stocking, and soil or lagoon sampling to better inform DEQ of pollution risks and improve transparency.

Thank you very much.

Christine Lawson,

Dear Ms. Lawson,

Although I live in the Broad River Watershed in the Western Piedmont of NC, and we have no swine CAFOs here, we do have many poultry CAFOs. Our community is carefully watching this process of permitting agricultural waste. We feel that the precedent set here will carry over to the way chicken waste is handled/regulated in the future. Many of our concerns are the same as for swine waste.

I am concerned about continued pollution originating from industrial swine facilities in North Carolina that impact communities and our public waters. While you are revising the permit please make sure to include the following important changes.

Smithfield Foods, the multinational company that makes hundreds of millions of profits annually, and other corporations that contract with North Carolina operations for swine production, should share responsibility for managing the waste produced by the animals they own.

DEQ should require mandatory groundwater monitoring where there is evidence of off-site impacts (or could simply say pollution of) to our water table.

DEQ should require swine facilities to evaluate the risk of phosphorus pollution from land applied animal waste, using an established formula that was created at great taxpayer expense.

Operators must be required to submit records to DEQ for public review of land application of waste, cropping, stocking, and soil or lagoon sampling to better inform DEQ of pollution risks and improve transparency.

The industrial swine business has no vested interest in the environmental health of North Carolina. It will pollute, hide incriminating evidence, and never accept responsibility for the environmental and health damage it causes. It is the job of the DEQ to FORCE NC industries to conduct business responsibly! DO THAT JOB!

Thank you very much.

Christine Lawson,

Dear Ms. Lawson,

I am concerned about continued pollution originating from industrial swine facilities in North Carolina that impact communities and our public waters. While you are revising the permit please make sure to include the following important changes.

Smithfield Foods, the multinational company that makes hundreds of millions of profits annually, and other corporations that contract with North Carolina operations for swine production, should share responsibility for managing the waste produced by the animals they own.

DEQ needs to collect sufficient data to assess hog waste pollution and make it publicly available.

DEQ should require mandatory groundwater monitoring where there is evidence of off-site impacts (or could simply say pollution of) to our water table.

DEQ should require swine facilities to evaluate the risk of phosphorus pollution from land applied animal waste, using an established formula that was created at great taxpayer expense.

Operators must be required to submit records to DEQ for public review of land application of waste, cropping, stocking, and soil or lagoon sampling to better inform DEQ of pollution risks and improve transparency.

All of this is particularly crucial, given that the state now seems to be in a regular cycle of catastrophic hurricanes and other storms that are making "100-year", "500-year" and even "1000+-year" precipitation events into relatively regular occurrences (Floyd in 1999, Matthew in 2016, Florence in 2018, and so on). These can no longer be considered as "unforeseeable" events and must be planned for. Open swine fecal waste pits, particularly in floodplains, just don't make sense now, if they ever did.

Thank you very much.

My family has had a home on the Pamlico River near Bath, NC, for 66 years. Over that time, we have seen a decrease in the fishing and crabbing, and an increase in overall pollution from many sources, including hog waste from the swine production industry. Please take action to protect North Carolina's beautiful rivers and the safety of our groundwater.

Thank you very much.

Christine Lawson,

Dear Ms. Lawson,

I live on the Neuse River in Kinston.

I had 51 inches of water from the Neuse River in my garage/first floor in Hurricane Matthew in 2016 and 16 inches in Hurricane Florence in 2018. The whole yard smelled like feces. I do not know if this was from municipal sewage spills or breached hog lagoons. It all smells the same. North Carolina should not allow continued operation of hog farms in the flood plain, whether it is in the 100 or the 500 year flood plain. It is dangerous and unsanitary. Please consider this in revising the permit.

Thank you very much.

Christine Lawson,

Dear Ms. Lawson,

Each April for the last five years I've led a group of paddlers down the Neuse from Raleigh to New Bern. Each year I smell the hog waste at certain areas along the river. I live in Oriental at the mouth of the Neuse and see the results of all the nutrients coming from hog farms in the form of algae and fish kills

For years, the State of North Carolina has required treatment of human waste before it is released into the state's rivers and streams. We should have the same standards for hog waste and it should be treated before being released. There should be no more spraying on land.

Thank you very much.

CAUTION: External email. Do not click links or open attachments unless verified. Send all suspicious email as an attachment to Report Spam.<<mailto:report.spam@nc.gov>>

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time. This is the most egregious practice I can imagine. You are public servants, not the servants of factory farms. We make the rules.

Thank you for considering public input before implementing these rules!

Sincerely,
Henrietta Jenrette

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

Hog lagoons should be covered and anaerobically decomposed to collect methane (a potent greenhouse gas) and reduce the toxicity of the waste prior to being allowed to be sprayed.

Subject: Draft General Swine Permit

December 4, 2018

Michael S. Regan
Secretary
NC Department of Environmental Quality
1601 Mail Service Center
Raleigh, NC 27699-1601

Dear Secretary Regan:

I am writing to you today on behalf of Coastal Carolina Riverwatch, to support many of NCDEQ's proposed improvements to permits for hog operations. North Carolina, the nation's second largest hog producer has a chance next year to require stronger pollution controls and more transparency from the pork industry and address our waste problems.

We support NC DEQ's draft permit because it gives added protections for the communities surrounding swine operations. These increased protections include: groundwater monitoring requirements, additional reporting requirements - through submission of an annual certification form, and increased transparency.

It is essential that NC DEQ fulfill its commitment to achieving and maintaining the fair and equal treatment of North Carolinians regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of the Permit.

While we appreciate and support the changes to the permit reflected in the current draft, we call on NC DEQ to go even further by requiring regular submission of waste management records detailing what is sprayed, when it is sprayed, and what it is sprayed onto. NC DEQ should require the submission of records that permittees are already obligated to create and maintain. This increased reporting will make it easier for department staff to cross-check data with community observations, enable more rapid identification of compliance issues, and better assess seasonality of practices. In addition, NC DEQ should require electronic filing of

records made under the permit for ease of access for department staff. Lastly, we recommend that NC DEQ require the use of technology that will automatically prevent prohibited practices like spraying waste in the rain or spraying when it is too windy.

Many of the added protections to the current draft Swine General Permit are needed and should not be taken out during the drafting process. Thank you for your all that you do to protect the environment and all of our impacted communities with more transparency and greater pollution controls.

Sincerely,

Dennis Howard

Dear Program Manager Christine Lawson,

Dear Ms. Lawson,

Hog farmers in NC do a good job. They already have a lot of regulations to follow. Requiring farmers to submit more paperwork for environmental activists to review does not do anything to protect the environment.

Thank you,
Jay

Dear Program Manager Christine Lawson,

This message is in strong support of the proposed rules for the hog farm general permit.

These factory farms have been allowed to pollute our air and water for far too long. People living near these farms have been losing their rights to live on their own land safely and decently for the sake of corporate profit.

The proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions is a good start, but additionally requiring those systems to spray toward the ground would be better.

I loudly applaud no longer giving informing farms in advance about upcoming inspections. They should not be able to cover their tracks ahead of time.

Thank you for requesting public input and for considering my views.

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit. The current rules fly in the face of human decency, allowing farms to spoil the air and water of neighboring people.

I urge you to pass the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. But the rule should add a clause saying that spray should be directed towards the ground rather than the air, where it will drift to neighbors.

Also, please end the practice of warning farms when they will be inspected.

Thank you.

Dear Program Manager Christine Lawson,

My daughter lived in Duplin County for 2 years while teaching at Warsaw Elementary after graduating from UNCW. We still remember the pervasive smell of hog farming in that area. The children she taught were from poor families who can never escape that area and the environmental impacts of hog farming. So I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Timothy Benbow

Dear Program Manager Christine Lawson,

I write in strong support of the proposed new rules for hog farm permits in our state.

The regulations that tie the use of spray field systems to wind conditions are good (although they could be stronger) and requiring the spray systems to shut down automatically when it rains is an excellent idea. I also strongly agree that it is time to end the practice of telling factory farms when they're going to be inspected. They should not be able to hide what they're doing. Smithfield and other animal factories will never voluntarily be good neighbors. It's the responsibility of our state government to ensure that these corporations behave responsibly and I thank you for beginning the process.

Sincerely,
Christina Peterson

CAUTION: External email. Do not click links or open attachments unless verified. Send all suspicious email as an attachment to [Report Spam](#).

Ms. Lawson,

For your consideration: Given the amount of hog feces and urine that escaped the open, mostly unlined, waste pits of large corporate hog farms during the recent hurricane, I would like to suggest a possible solution. Like other producers of excrement (cities, homes not on municipal sewage system) hog farms should be required to have a functioning sewage treatment facility. It wouldn't have to be as elaborate as a city sized plant, but would need to process the waste for a period of time long enough to ensure control of bacteria and odor. Possibly a series of septic tanks with large drain fields. Something that would eliminate the harmful bacteria and provide a method to safely dispose of the liquid over flow.

There is a hog farm about 1 mile west of my home. It's only a problem for me when there is a wind out of the west. What about those who live downwind from other wind directions? Outside activities are limited at this time. Everyone who lives downwind of these hog farms should not have to endure the odor of their excrement. Or have to worry that a flood from an especially heavy rain of a hurricane could contaminate local surface water. I would venture to guess that there is enough profit in this business to handle a low cost sewage system.

Thank You,
Donald Rumph

Dear Program Manager Christine Lawson,

Hog waste is a blight on our state's residents' health and sense of breathing safely. We had major spills into the Neuse River in 1999 and this fall from hurricanes excessive and historic rainfall. The waste and hog lagoons must be regulated to protect the health of our rivers and people. I urge you to create rules that will enable this waste to be processed and disposed of in an eco-friendly way.

Hello Christine:

I am writing to ask the DEQ to please exercise the most stringent rules possible on swine waste.

NC is allowing an industry that's 25% (or more?) owned by the Chinese to pollute our air and water in the most disgusting way possible -- with animal excrement.

Swine waste is a horror to live with -- and far too many low-income and minority communities in eastern NC face this horror every day.

The 'swine-waste-to-electricity' gambit is a scam, it's a band-aid on a gaping wound. The electricity produced is so expensive and the problems are so enormous that for the past five (maybe it's six now!) years Duke Energy has [requested an exemption](#) from the swine waste requirements in NC's Renewable Energy Portfolio Standard.

Why are we doing this? Why are we letting an industry with zero concern about the real people it's harming ruin our water, air and land? I'm afraid the reason is the same old, same old: industry gives money to politicians, who look the other way.

This is beyond sad, it's criminal. Please, as part of Governor Cooper's administration, care about the real people who are victimized by these greedy, rapacious monsters, and write some rules with teeth.

Dear Jon,

First I wanted to say thank you to NC DEQ for inviting me to participate in the stakeholder process regarding the proposed changes to the general permit for swine. The draft permit contained many great ideas, including areas long overdue for improvement. It was the largest set of proposed changes in decades. The process set by the facilitator and run by NC DEQ staff allowed me to not only engage with these changes but to hear the concerns of other stakeholders and discuss them in an ordered and civil manner.

But now I am faced with an impossible task. The comment deadline is set for this coming Friday. For the NC Pork Council, Smithfield Foods and their sponsored trade association, NC Farm Families, those will easily make that deadline since they oppose all changes to the General Permit. Clearly Prestage and Farm Bureau have fallen in line with the industry position that no changes are needed. Those comments will be brief indeed.

What I hope to do is have times to craft comments which incorporate the feedback from the stakeholder process. Some concerns about language and structure can be fixed in a redraft responsive to the concerns. I have no time between now and Friday to do such a redraft, although a redraft could reduce the objections of the industry stakeholders with whom I had productive discussions in my small group.

Having invested wisely in a process which sought to air concerns of all stakeholders, it is foolish to rush the follow up process. I respectfully request an extension of 30 days to submit comments, including a proposed set of revisions to the draft permit proposal which addresses stated concerns of some industry stakeholders.

As you may know, our Clinic represented Keeper groups challenging the reclassification of the Lower Cape Fear River to swamp waters. The purpose of that reclassification was to loosen the rules so no TMDL would be required for the absence of dissolved oxygen in the river. That river has not gotten cleaner. EPA has rejected the reclassification. We should not just keep kicking the general permit can down the road, but try and use this stakeholder process to help bring about a better permit.

Thank you for your dedicated service to the people of North Carolina.

Best,

Ryke

CAUTION: External email. Do not click links or open attachments unless verified. Send all suspicious email as an attachment to Report Spam.<<mailto:report.spam@nc.gov>>

Dear Program Manager Christine Lawson,

As a resident of North Carolina, I strongly support the proposed new rules for the hog farm general permit.

Many factory farms have polluted our air and water with little oversight. The unfortunate neighbors of these farms are held hostage to corporate profit, without adequate protection to protect their basic rights to enjoy their own property and lives. Many of the neighbors are poor with little political or financial power.

The proposed rule requiring automatic shutoff of the spray field systems when it rains and regulations for spraying based on wind conditions are important changes. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

It is also important that factory farms not be given advance notice of inspections. They should not be able to cover their tracks ahead of time.

I appreciate that you are considering public comments before the new rules become law!

Sincerely,
Nancy Reid

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

NC needs to protect our Citizens and environment. Make corporate hog farms find better ways to destroy hog waste or make the corporate hog farms pay restitution for poor service and management.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,
Bridget Dunford

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit.

For too long, these factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Hog waste has found its way into our streams and rivers, killing fish and polluting drinking water for people and animals. It has also produced a foul odor and problems for neighbors by being blown or leaking onto neighboring properties.. It is a significant health and environmental hazard that needs to be effectively corrected, not just somewhat reduced. We need effective laws and rules about managing hog waste in a safe way that does not pollute the environment.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. However, I would like to see a rule requiring those systems to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. Measures need to be taken by law that keep hog waste from overflowing hog waste lagoons when there is heavy rain or flooding.

I appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!

Sincerely,

Christine Lawson,

As a member of the public with friends and relatives who reside in North Carolina, as well as a frequent visitor of the state, I write today to request stronger pollution controls and more transparency in the general permit for swine waste management.

Specifically, I'd like to see mandatory groundwater monitoring when there's evidence pathogens or antibiotics from industrial animal operations have seeped into groundwater. The permit should also require swine operators to use the state's phosphorus loss assessment tool, and limit phosphorus application where necessary to prevent or mitigate nutrient pollution.

Finally, it should be revised to require monthly electronic submission of reports on the contents of cesspools; the volume and location of spraying, the crops sprayed, and the results of soil monitoring of the fields. This submission is necessary so this data is available to the public.

Thank you so much for your consideration.

CAUTION: External email. Do not click links or open attachments unless verified. Send all suspicious email as an attachment to Report Spam.<<mailto:report.spam@nc.gov>>

Dear Program Manager Christine Lawson,

I write to support the proposed new rules for the hog farm general permit, although I see them as only a first step in the right direction.

We have to be sure that these farms are not polluting the air and water.

Fecal matter from pigs should be treated just like we treat human sewage. There is a danger of spreading antibiotic resistant bacteria in the method used now, in addition to the general pollution of the air and water.

I would like to see closed hog waste digesters that will not spill out into drinking water and communities with each flooding incident. These floods will be a common occurrence from now on, not a freak 100-year event. I am against placement of hog farms in what are now floodplains.

I particularly like the proposed rule requiring automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions.

However, I would like to see a rule requiring those systems to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties. There must be better ways to spread this residue rather than aerosolizing it.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

Thank you for considering public input before implementing these rules!"

Dear Program Manager Christine Lawson,

I'm writing in regard for the proposed rules for pig farm permits and my support of them.

For years factory farms have been allowed to pollute our air and water with little oversight. The farms' neighbors are held hostage to corporate profit, with little recourse to protect their basic rights to enjoy their own property and lives. And those neighbors are frequently poor and people of color, with little to no political or financial power.

Neither should farms be given advance warning of proposed inspections. Because NC has been especially egregious about whistleblower comments (which only proves farm owners have much to hide from the public) farms should not be allowed to clean up their act for an incoming inspection. If they had nothing to hide, this would not even be an issue..

Thank you for considering public input before implementing these rules! Let's all think about becoming vegetarians or at the very least eating meat much less often. These animals feel pain and there is absolutely no reason to eat them.

Sincerely,
Benita Auge

I have reviewed the draft permit and would like to make a comment for the record.

In Section I, Performance Standards, it states:

“ Facilities must be designed, constructed, operated, and maintained to contain all waste plus the runoff from a 25-year, 24-hour rainfall event for the location of the facility. A facility that has a discharge of waste that results because of a storm event more severe than the 25-year, 24-hour storm will not be considered to be in violation of this General Permit if the facility is otherwise in compliance with its Certified Animal Waste Management Plan (CAWMP) and this General Permit”

In the last year eastern North Carolina has experienced **two 100 year storm events**, the hurricanes Florence and Michael. It is anticipated that as global climate warming continues, the frequency of severe weather events will certainly increase – storms and flooding will become more frequent. Given these changes, what is the basis for choosing a 25 year weather event as the level above which no further protection needs to be incorporated in the lagoon design and no culpability is incurred in the event of a spill?

Taken at face value, the 25 year event standard seems utterly inadequate.

Good afternoon,

Thank you all for all the work put into having the general permit renewal stakeholder meeting on Tuesday. Overall, the stakeholder meeting was productive and informative. The materials provided, the use of the facilitator, and the break out groups were a great way to have substantive and respectful conversations during the day. We are encouraged by the draft permit and look forward to submitting supportive comments soon.

In an effort to have - on the record - the full representation of North Carolinians that also support the draft, especially those most impacted by CAFOs, the NC Conservation Network requests that the Division of Water Resources extend the stakeholder comment deadline for the draft general permit to January 7th.

The stakeholder meeting brought out many important viewpoints from all sides of the issue. Grassroots groups as well as other interested parties need more time to respond to the points raised during the meeting. In addition, new understandings were reached regarding proposed changes. With this new understanding of the draft, stakeholders need more to fully articulate their comments. Lastly, while we appreciate the location of the meeting in Sampson County, I've heard that the change from ECU caused confusion as to where community members were supposed to go for the evening public comment opportunity.

As the Department continues to strive for meaningful engagement of communities, it is important to note that there is a constant and very real worry of intimidation and negative ramifications facing communities and neighbors of CAFOs who speak out about their experiences. While we all work to better understand this and ways to overcome it, this extension will help give time for meaningful engagement.

It is my understanding that other groups have a similar request and I'd be happy to answer any questions you have about the reasoning.

We appreciate your consideration and continued work for the people and environment of North Carolina.

Thank you,

Jamie Cole

Dear Program Manager Christine Lawson,

The DEQ's job is to protect public and environmental health - not protect multi-billion dollar Chinese owned corporations.

These are factories - not farms - and they have done enough damage to our state's real farm culture, along with our air and water and soil. They have also threatened the health and diminished the quality-of-life for those living near their facilities. The dignity of our neighbors is being stripped by this multi-billion dollar Chinese-owned company that could easily clean up their waste mgmt procedures. Instead, they have paid millions to spread false narratives pitting neighbors against neighbors - and using racial divides to amp it up.

At the very least, there should be an automatic shutoff of the spray field systems when it rains, and regulations for spraying based on wind conditions. There should also be a rule requiring those system to more directly spray toward the ground, rather than shooting into the air and being picked up by the wind, where the waste can blow onto neighboring properties.

I also appreciate ending the practice of giving farms a head's up on inspections. They should not be able to cover their tracks ahead of time.

While this cannot be considered during this comment session - PLEASE, require permitting for poultry operations - you know new facilities are popping up daily - with ZERO oversight and ZERO regulation. From 148 million broiler chickens in NC in 2016 to 830 million as of Jan. 2018 (according to USDA census) That is absolutely ridiculous.

Thank you for considering public input before implementing these rules!

Sincerely,

Christine Lawson,

I'm writing to request stronger pollution controls and more transparency in the general permit for swine waste management. This matter is of paramount importance for the health of the people who live in the communities impacted by industrial animal operations. When breathing and drinking the water is hazardous to their health, policies must be adopted to protect the families in the affected area.

Specifically, I'd like to see mandatory groundwater monitoring when there's evidence pathogens or antibiotics from industrial animal operations have seeped into groundwater. The permit should also require swine operators to use the state's phosphorus loss assessment tool, and limit phosphorus application where necessary to prevent or mitigate nutrient pollution.

Finally, it should be revised to require monthly electronic submission of reports on the contents of cesspools; the volume and location of spraying, the crops sprayed, and the results of soil monitoring of the fields. This submission is necessary so this data is available to the public.

Clean water is vital to the health of the environment and our communities. We need to be willing to go to great lengths to keep the water in our lakes, creeks, and rivers clean. We have the science to do that in a cost effective way. We just need the will to do it.

Christine Lawson,

I'm writing to request stronger pollution controls and more transparency in the general permit for swine waste management.

Specifically, I'd like to see mandatory groundwater monitoring when there's evidence pathogens or antibiotics from industrial animal operations have seeped into groundwater. The permit should also require swine operators to use the state's phosphorus loss assessment tool, and limit phosphorus application where necessary to prevent or mitigate nutrient pollution.

Finally, it should be revised to require monthly electronic submission of reports on the contents of cesspools; the volume and location of spraying, the crops sprayed, and the results of soil monitoring of the fields. This submission is necessary so this data is available to the public.

Thank you so much for your consideration.

Christine Lawson,

I'm writing to request stronger pollution controls and more transparency in the general permit for swine waste management.

I saw and smelled the hog waste in the New River from the Oceanview spill in 1995. In the ensuing years I have observed the wink and a smile that has perpetrated unceasing violation of both the law and the rights of those who experience and suffer the consequences of the present unsustainable practices.

Specifically, I'd like to see mandatory groundwater monitoring when there's evidence pathogens or antibiotics from industrial animal operations have seeped into groundwater. The permit should also require swine operators to use the state's phosphorus loss assessment tool, and limit phosphorus application where necessary to prevent or mitigate nutrient pollution.

Christine Lawson,

I'm writing to request stronger pollution controls and more transparency in the general permit for swine waste management.

Specifically, I'd like to see mandatory groundwater monitoring when there's evidence pathogens or antibiotics from industrial animal operations have seeped into groundwater. The permit should also require swine operators to use the state's phosphorus loss assessment tool, and limit phosphorus application where necessary to prevent or mitigate nutrient pollution.

Finally, it should be revised to require monthly electronic submission of reports on the contents of cesspools; the volume and location of spraying, the crops sprayed, and the results of soil monitoring of the fields. This submission is necessary so this data is available to the public.

Thank you so much for your consideration.

December 4, 2018

Michael S. Regan

Secretary

NC Department of Environmental Quality

1601 Mail Service Center

Raleigh, NC 27699-1601

Dear Secretary Regan:

I am writing to you today on behalf of Coastal Carolina Riverwatch, to support many of NCDEQ's proposed improvements to permits for hog operations.

North Carolina, the nation's second largest hog producer has a chance next year to require stronger pollution controls and more transparency from the pork industry and address our waste problems.

We support NC DEQ's draft permit because it gives added protections for the communities surrounding swine operations. These increased protections include: groundwater monitoring requirements, additional reporting requirements - through submission of an annual certification form, and increased transparency.

It is essential that NC DEQ fulfill its commitment to achieving and maintaining the fair and equal treatment of North Carolinians regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of the Permit.

While we appreciate and support the changes to the permit reflected in the current draft, we call on NC DEQ to go even further by requiring regular submission of waste management records detailing what is sprayed, when it is sprayed, and what it is sprayed onto. NC DEQ should require the submission of records that permittees are already obligated to create and maintain. This increased reporting will make it easier for department staff to cross-check data with community observations, enable more rapid identification of compliance issues, and better assess seasonality of practices. In addition, NC DEQ should require electronic filing of records made under the permit for ease of access for department staff. Lastly, we recommend that NC DEQ require the use of technology that will automatically prevent prohibited practices like spraying waste in the rain or spraying when it is too windy.

Many of the added protections to the current draft Swine General Permit are needed and should not be taken out during the drafting process. Thank you for your all that you do to protect the environment and all of our impacted communities with more transparency and greater pollution controls.

Sincerely,

Dennis Howard

Dennis Howard
